#### TS5A3153 1-Ω SPDT ANALOG SWITCH 5-V/3.3-V SINGLE-CHANNEL 2:1 MULTIPLEXER/DEMULTIPLEXER

SCDS215-OCTOBER 2005

#### Description

The TS5A3153 is a single-pole double-throw (SPDT) analog switch that is designed to operate from 1.65 V to 5.5 V. The device offers a low ON-state resistance and an excellent on-resistance matching with the break-before-make feature, to prevent signal distortion during the transferring of a signal from one channel to another. The device has an excellent total harmonic distortion (THD) performance and consumes very low power. These features make this device suitable for portable audio applications.

### Applications

- Cell Phones
- PDAs
- Portable Instrumentation
- Audio and Video Signal Routing
- Low-Voltage Data Acquisition System
- Communication Circuits
- Modems
- Hard Drives
- Computer Peripherals
- Wireless Terminals and Peripherals

#### Features

- Isolation in the Powered-Off Mode, V<sub>+</sub> = 0
- Specified Break-Before-Make Switching
- Low ON-State Resistance (1 Ω)
- Control Inputs Are 5.5-V Tolerant
- Low Charge Injection
- Excellent ON-State Resistance Matching
- Low Total Harmonic Distortion (THD)
- 1.65-V to 5.5-V Single-Supply Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
  - 2000-V Human-Body Model
    - (A114-B, Class II)
  - 1000-V Charged-Device Model (C101)

## Summary of Characteristics

 $V_{+} = 5 V, T_{A} = 25^{\circ}C$ 

| Configuration  | 2:1 Multiplexer/<br>Demultiplexer<br>(SPDT) |
|--|---|
| Number of channels   | 15C.C1                                      |
| ON-state resistance (r <sub>on</sub> )                     | 1.1 Ω                                       |
| ON-state resistance match (∆r <sub>on</sub> )              | 0.1 Ω                                       |
| ON-state resistance flatness (ron(flat))                   | 0.15 Ω                                      |
| Turn-on/turn-off time (t <sub>ON</sub> /t <sub>OFF</sub> ) | 20 ns/15 ns                                 |
| Break-before-make time (t <sub>BBM</sub> )                 | 12 ns                                       |
| Charge injection (Q <sub>C</sub> )                         | 36 pC                                       |
| Bandwidth (BW)   | 100 MHz                                     |
| OFF isolation (OISO)                                       | –65 dB at 1 MHz                             |
| Crosstalk (XTALK)  | -66 dB at 1 MHz                             |
| Total harmonic distortion (THD)                            | 0.01%                                       |
| Leakagecurrent(COM(OFF)/INO(OFF))                          | ±20 nA                                      |
| Power-supply current (I <sub>+</sub> )                     | 0.1 μΑ                                      |
| Package option   | 8-pin SSOP, VSSOP, or<br>DSBGA              |

#### FUNCTION TABLE

| EN | IN | NC TO COM,<br>COM TO NC | NO TO COM,<br>COM TO NO |
|----|----|-------------------------|-------------------------|

ODDEDING INFORMATION

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.
(2) DBV/DCK: The actual top-side marking has one additional character that designates the assembly/test site.

YEP/YZP: The actual top-side marking has three preceding characters to denote year, month, and sequence code, and one following character to designate the assembly/test site. Pin 1 identifier indicates solder-bump composition (1 = SnPb,  $\bullet = \text{Pb-free}$ ).

(1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.

(2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum

(3) All voltages are with respect to ground, unless otherwise specified.

(4) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

(5) This value is limited to 5.5 V maximum.

(6) Pulse at 1 ms duration < 10% duty cycle

(7) The package thermal impedance is calculated in accordance with JESD 51-7.

SCDS215-OCTOBER 2005

## Electrical Characteristics for 5-V Supply<sup>(1)</sup>

(1) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum

(2) All unused digital inputs of the device must be held at V<sub>+</sub> or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

#### PARAMETER DESCRIPTION

| SYMBOL                | DESCRIPTION  |  |  |  |  |  |
|-----------------------|--|--|--|--|--|--|
| VCOM                  | Voltage at COM   |  |  |  |  |  |
| V <sub>NC</sub>       | Voltage at NC  |  |  |  |  |  |
| V <sub>NO</sub>       | Voltage at NO  |  |  |  |  |  |
| ron                   | Resistance between COM and NC or COM and NO ports when the channel is ON   |  |  |  |  |  |
| <sup>r</sup> peak     | Peak on-state resistance over a specified voltage range  |  |  |  |  |  |
| $\Delta r_{OD}$       | Difference of ron between channels in a specific device  |  |  |  |  |  |
| <sup>r</sup> on(flat) | Difference between the maximum and minimum value of ron in a channel over the specified range of conditions  |  |  |  |  |  |
| INC(OFF)              | Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the OFF state under worst-case input and output conditions  |  |  |  |  |  |
| INC(PWROFF)           | Leakage current measured at the NC port during the power-off condition, $V_+ = 0$  |  |  |  |  |  |
| INO(OFF)              | Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the OFF state under worst-case input and output conditions  |  |  |  |  |  |
| INO(PWROFF)           | Leakage current measured at the NO port during the power-off condition, $V_+ = 0$  |  |  |  |  |  |
| INC(ON)               | Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the ON state and the output (COM) open  |  |  |  |  |  |
| INO(ON)               | Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the ON state and the output (COM) open  |  |  |  |  |  |
| ICOM(ON)              | Leakage current measured at the COM port, with the corresponding channel (COM to NO or COM to NC) in the ON state and the output (NC or NO) open   |  |  |  |  |  |
| ICOM(OFF)             | Leakage current measured at the COM port, with the corresponding channel (COM to NO or COM to NC) in the OFF state and the output (NC or NO) open  |  |  |  |  |  |
| ICOM(PWROFF)          | Leakage current measured at the COM port during the power-off condition, $V_+ = 0$   |  |  |  |  |  |
| VIH                   | Minimum input voltage for logic high for the control input (IN, EN)  |  |  |  |  |  |
| VIL                   | Maximum input voltage for logic low for the control input (IN, EN)   |  |  |  |  |  |
| VI                    | Voltage at the control input (IN, EN)  |  |  |  |  |  |
| IIH, IIL              | Leakage current measured at the control input (IN, EN)   |  |  |  |  |  |
| ton                   | Turn-on time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM, NC, or NO) signal when the switch is turning ON.  |  |  |  |  |  |
| <sup>t</sup> OFF      | Turn-off time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM, NC, or NO) signal when the switch is turning OFF.  |  |  |  |  |  |
| <sup>t</sup> BBM      | Break-before-make time. This parameter is measured under the specified range of conditions and by the propagation delay between the output of two adjacent analog channels (NC and NO) when the control signal changes state.  |  |  |  |  |  |
| QC                    | Charge injection is a measurement of unwanted signal coupling from the control (IN) input to the analog (NC, NO, or COM) output. This is measured in coulomb (C) and measured by the total charge induced due to switching of the control input. Charge injection, $Q_C = C_L \times \Delta V_{COM}$ , $C_L$ is the load capacitance, and $\Delta V_{COM}$ is the change in analog output voltage. |  |  |  |  |  |

SCDS215 - OCTOBER 2005

#### PARAMETER DESCRIPTION (continued)

| SYMBOL                | DESCRIPTION  |
|-----------------------|--|
| C <sub>NC(OFF)</sub>  | Capacitance at the NC port when the corresponding channel (NC to COM) is OFF   |
| C <sub>NO(OFF)</sub>  | Capacitance at the NO port when the corresponding channel (NO to COM) is OFF   |
| C <sub>NC(ON)</sub>   | Capacitance at the NC port when the corresponding channel (NC to COM) is ON  |
| C <sub>NO(ON)</sub>   | Capacitance at the NO port when the corresponding channel (NO to COM) is ON  |
| C <sub>COM(ON)</sub>  | Capacitance at the COM port when the corresponding channel (COM to NC or COM to NO) is ON  |
| C <sub>COM(OFF)</sub> | Capacitance at the COM port when the corresponding channel (COM to NC or COM to NO) is OFF   |
| Cl                    | Capacitance of control input (IN, EN)  |
| O <sub>ISO</sub>      | OFF isolation of the switch is a measurement of OFF-state switch impedance. This is measured in dB in a specific frequency, with the corresponding channel (NC to COM or NO to COM) in the OFF state.  |
| X <sub>TALK</sub>     | Crosstalk is a measurement of unwanted signal coupling from an ON channel to an OFF channel (NC to NO or NO to NC). This is measured in a specific frequency and in dB.  |
| BW                    | Bandwidth of the switch. This is the frequency in which the gain of an ON channel is -3 dB below the DC gain.  |
| THD                   | Total harmonic distortion describes the signal distortion caused by the analog switch. This is defined as the ratio of root mean square (RMS) value of the second, third, and higher harmonic to the absolute magnitude of the fundamental harmonic. |
| l <sub>+</sub>        | Static power-supply current with the control (IN, $\overline{EN}$ ) pin at V <sub>+</sub> or GND   |

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

NOTES: A. All linear dimensions are in millimeters.

- B. This drawing is subject to change without notice.
- C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
- D. Falls within JEDEC MO-187 variation CA.

#### **IMPORTANT NOTICE**

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
