DESCRIPTION

The TS912 is a RAIL TO RAIL CMOS dual operational amplifier designed to operate with a single or dual supply voltage.

The input voltage range V_{icm} includes the two supply rails V_{CC^+} and V_{CC^-} .

The output reaches :

- $V_{CC^-} +40mV - V_{CC^+} -50mV$ with $R_L = 10k\Omega$
- $V_{CC^-} +350mV - V_{CC^+} -350mV$ with $R_L = 600\Omega$

This product offers a broad supply voltage operating range from 2.7V to 16V and a supply current of only 200μA/amp. ($V_{CC} = 3V$).

Source and sink output current capability is typically 40mA (at $V_{CC} = 3V$), fixed by an internal limitation circuit.

STMicroelectronics is offering a quad op-amp with the same features : TS914.
