DESCRIPTION

The US1010-25 is a low dropout three terminal fixed output regulator with minimum of 1A output current capability. This product is specifically designed to provide well regulated supply for low voltage IC applications as well as generating clock supply for the PC applications. The US 1010 is **guaranteed to have <1.3V drop out at full load current** making it ideal to provide well regulated with 3.8V input supply. The US1010 is specifically designed to be stable with low cost Aluminium capacitors while still maintains stability with low ESR tantalum caps as well.

TYPICAL APPLICATION

Typical Application of US1010-25 in a 5V to 2.5V regulator .

Note 1 : Low duty cycle pulse testing with Kelvin connections are required in order to maintain accurate data.

Note 2 : Drop-out voltage is defined as the minimum differential voltage between V_{in} and V_{out} required to maintain regulation at V_{out} . It is measured when the output voltage drops 1% below its nominal value.

PIN DESCRIPTIONS

PIN#	PIN SYMBOL	Pin Description
1	Gnd	Gnd pin. This pin must be connected to GND plane using a low inductance short connection.
2	Vout	The output of the regulator. This pin is also connected to the tab of the package. An output capacitor must be connected to this pin to insure stability of the regulator.
3	Vin	Input pin of the regulator.
