

Product specification Supersedes data of February 1996 IC24 Data Handbook 1997 Mar 18

74LVC86

#### **FEATURES**

- Wide supply voltage range of 1.2 to 3.6 V
- In accordance with JEDEC standard no. 8-1A.
- Inputs accept voltages up to 5.5 V
- CMOS low power consumption
- Direct interface with TTL levels

### DESCRIPTION

The 74LVC86 is a high-performance, low-power, low-voltage Si-gate CMOS device that is pin and superior to most advanced CMOS compatible TTL families.

Inputs can be driven from either 3.3 V or 5 V devices. This feature allows the use of these devices as translators in a mixed 3.3 V/5 V environment.

The 74LVC86 provides the 2-input EXCLUSIVE-OR function.

#### QUICK REFERENCE DATA

GND = 0 V;  $T_{amb} = 25^{\circ}C$ ;  $t_r = t_f \le 2.5$  ns

SYMBOL	PARAMETER	CONDITIONS	TYPICAL	UNIT
t <sub>PHL</sub> t <sub>PLH</sub>	Propagation delay nA, nB to nY	C <sub>L</sub> = 15 pF; V <sub>CC</sub> = 3.3 V	3.7	ns
CI	Input capacitance		5.0	pF
C <sub>PD</sub>	Power dissipation capacitance per gate	$V_{CC}$ = 3.3 V, $V_I$ = GND to $V_{CC}^{1}$	55	pF

NOTE:

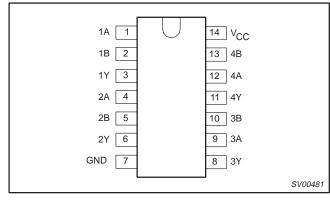

1.  $C_{PD}$  is used to determine the dynamic power dissipation (P<sub>D</sub> in  $\mu$ W)  $\begin{array}{l} F_D = C_{PD} \times V_{CC}^2 \times f_i \quad \Sigma \; (C_L \times V_{CC}^2 \times f_o) \; \text{where:} \\ f_i = \text{input frequency in MHz; } C_L = \text{output load capacity in pF;} \\ f_o = \text{output frequency in MHz; } V_{CC} = \text{supply voltage in V;} \end{array}$ 

 $\Sigma (C_L \times V_{CC}^2 \times f_0) =$  sum of the outputs.

#### ORDERING INFORMATION

#### ABSOLUTE MAXIMUM RATINGS<sup>1</sup>

In accordance with the Absolute Maximum Rating System (IEC 134).

Voltages are referenced to GND (ground = 0V).

SYMBOL	PARAMETER	CONDITIONS	RATING	UNIT
V <sub>CC</sub>	DC supply voltage		-0.5 to +6.5	V
I <sub>IK</sub>	DC input diode current	V <sub>I</sub> 0	-50	mA
VI	DC input voltage	Note 2	-0.5 to +5.5	V
V <sub>I/O</sub>	DC input voltage range for I/Os		-0.5 to V <sub>CC</sub> +0.5	V
I <sub>OK</sub>	DC output diode current	$V_O V_{CC} \text{ or } V_O 0$	50	mA
V <sub>OUT</sub>	DC output voltage	Note 2	–0.5 to V <sub>CC</sub> +0.5	V
I <sub>OUT</sub>	DC output source or sink current	$V_{O} = 0$ to $V_{CC}$	50	mA
I <sub>GND</sub> , I <sub>CC</sub>	DC V <sub>CC</sub> or GND current		100	mA
T <sub>stg</sub>	Storage temperature range		-60 to +150	°C
P <sub>TOT</sub>	Power dissipation per package – plastic mini-pack (SO) – plastic shrink mini-pack (SSOP and TSSOP)	above +70°C derate linearly with 8 mW/K above +60°C derate linearly with 5.5 mW/K	500 500	mW

NOTES:

1. Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

2. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

74LVC86

#### DC ELECTRICAL CHARACTERISTICS

Over recommended operating conditions. Voltages are referenced to GND (ground = 0V).

	DEFINITIONS							
Data Sheet Identification	Product Status	Definition						
Objective Specification	Formative or in Design	This data sheet contains the design target or goal specifications for product development. Specifications may change in any manner without notice.						
Preliminary Specification	Preproduction Product	This data sheet contains preliminary data, and supplementary data will be published at a later date. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.						
Product Specification	Full Production	This data sheet contains Final Specifications. Philips Semiconductors reserves the right to make changes at any time without notice, in order to improve design and supply the best possible product.						

Philips Semiconductors and Philips Electronics North America Corporation reserve the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified. Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

#### LIFE SUPPORT APPLICATIONS

Philips Semiconductors and Philips Electronics North America Corporation Products are not designed for use in life support appliances, devices, or systems where malfunction of a Philips Semiconductors and Philips Electronics North America Corporation Product can reasonably be expected to result in a personal injury. Philips Semiconductors and Philips Electronics North America Corporation customers using or selling Philips Semiconductors and Philips Electronics North America Corporation Products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors and Philips Electronics North America Corporation for any damages resulting from such improper use or sale.
