## Product Preview Low-Voltage 1.8/2.5/3.3V 16-Bit Transparent Latch With 3.6V-Tolerant Inputs and Outputs (3-State, Non-Inverting)

The MC74VCX16373 is an advanced performance, non-inverting 16-bit transparent latch. It is designed for very high-speed, very low-power operation in 1.8 V , 2.5 V or 3.3 V systems. The VCX16373 is byte controlled, with each byte functioning identically, but independently. Each byte has separate Output Enable and Latch Enable inputs. These control pins can be tied together for full 16-bit operation.

When operating at 2.5 V (or 1.8 V ) the part is designed to tolerate voltages it may encounter on either inputs or outputs when interfacing to 3.3 V busses. It is guaranteed to be over-voltage tolerant to 3.6 V .

The MC74VCX16373 contains 16 D-type latches with 3-state 3.6 V -tolerant outputs. When the Latch Enable (LEn) inputs are HIGH, data on the Dn inputs enters the latches. In this condition, the latches are transparent, (a latch output will change state each time its D input changes). When LE is LOW, the latch stores the information that was present on the $D$ inputs a setup time preceding the HIGH-to-LOW transition of LE. The 3-state outputs are controlled by the Output Enable (OEn) inputs. When OE is LOW, the outputs are enabled. When OE is HIGH, the standard outputs are in the high impedance state, but this does not interfere with new data entering into the latches.

- Designed for Low Voltage Operation: $\mathrm{V}_{\mathrm{CC}}=1.8-3.6 \mathrm{~V}$
- 3.6V Tolerant Inputs and Outputs
- High Speed Operation: 3.0ns max for 3.0 to 3.6 V
3.4 ns max for 2.3 to 2.7 V 6.0 ns max for 1.8 V
- Static Drive:
$\pm 24 \mathrm{~mA}$ Drive at 3.0 V
$\pm 18 \mathrm{~mA}$ Drive at 2.3 V
$\pm 6 \mathrm{~mA}$ Drive at 1.8 V
- Supports Live Insertion and Withdrawal
- IOFF Specification Guarantees High Impedance When $\mathrm{V}_{\mathrm{CC}}=0 \mathrm{~V}$
- Near Zero Static Supply Current in All Three Logic States ( $20 \mu \mathrm{~A}$ ) Substantially Reduces System Power Requirements
- Latchup Performance Exceeds $\pm 300 \mathrm{~mA}$
- ESD Performance: Human Body Model >2000V; Machine Model >200V

4. These AC parameters are preliminary and may be modified prior to release. For $\mathrm{C}_{\mathrm{L}}=50 \mathrm{pF}$, add approximately 300 ps to the AC maximum specification.
5. Skew is defined as the absolute value of the difference between the actual propagation delay for any two separate outputs of the same device. The specification applies to any outputs switching in the same direction, either HIGH-to-LOW ( tOSHL ) or LOW-to-HIGH (tOSLH); parameter guaranteed by design.

## OUTLINE DIMENSIONS

#### Abstract

Motorola reserves the right to make changes without further notice to any products herein. Motorola makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does Motorola assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters which may be provided in Motorola data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. Motorola does not convey any license under its patent rights nor the rights of others. Motorola products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the Motorola product could create a situation where personal injury or death may occur. Should Buyer purchase or use Motorola products for any such unintended or unauthorized application, Buyer shall indemnify and hold Motorola and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that Motorola was negligent regarding the design or manufacture of the part. Motorola and $\mathbb{M})$ are registered trademarks of Motorola, Inc. Motorola, Inc. is an Equal Opportunity/Affirmative Action Employer.
