QUAD 2-INPUT OR GATE

The TC74LVX32 is a high speed CMOS 2-INPUT OR GATE fabricated with silicon gate C²MOS technology.
Designed for use in 3.3 Volt systems, it achieves high speed operation while maintaining the CMOS low power dissipation.
This device is suitable for low voltage and battery operated systems.
The internal circuit is composed of 4 stages including buffer output, which provide high noise immunity and stable output.
An input protection circuit ensures that 0 to 7V can be applied to the input pins without regard to the supply voltage. This device can be used to interface 5V to 3V systems and two supply systems such as battery back up. This circuit prevents device destruction due to mismatched supply and input voltages.

(Note) The JEDEC SOP (FN) is not available in Japan.
