

Weller®
Get the Advantage

THE WELLER ADVANTAGE

Weller has come a long way from its humble beginnings back in 1945 when Carl Weller, a home radio repairman, wasn't satisfied with the bulky, slow-heating soldering irons that were the tools of his trade. The technology he pioneered, combined with his own design ingenuity, created the first soldering gun, an invention that revolutionized the electronics manufacturing and repair industries.

Today, the Weller brand is still synonymous with electronics design innovation, but in a very different way. Weller is now the most respected name in specialized soldering and desoldering products for production, rework, and repair of through hole and SMT boards, products for contact removal of ICs and QFPs, non-contact hot air products, and much more.

Weller's latest line of products again breaks new ground... this time in the fast-growing arena of lead-free soldering technology. Weller Silver Series stations have the

power to handle the extra demands of lead-free soldering and the versatility to tackle a wide array of applications. As always, the famous Weller blue signifies products that help maximize productivity with a combination of innovation and value.

See for yourself...*the* time has never been better to get the Weller advantage.

THE WELLER ADVANTAGE:

Another Weller breakthrough gives you two pencils in one. This powerful 80-watt pencil allows rapid production when working with lead-free solder, high mass components, and other demanding applications. A special silver heating element for low thermal loss and fast recover make this unit ideal for continuous production work. And the interchangeable barrel gives you the option of working with either a traditional length or shorter tip-to-grip.

FEATURES AND BENEFITS:

- Modern LCD technology gives the user critical information at a glance
- Three freely programmable temperature preset buttons allow quick and easy temperature changes
- Powerful 80-watt pencil allows rapid production when working with lead-free solder, high-mass components, and other demanding applications

The following functions are built in to the WD1 power unit:

- Setback time: Allows programming of the number of minutes (1 – 99), before temperature sets back to idle mode.
- Standby temperature: Allows selection of desired setback temperature, down to 200°F.
- Temperature lockout: Allows supervisor to easily set a temperature that cannot be changed by the operator.
- °F/°C switching: Allows the temperature display to read in either °F or °C.
- Temperature offset: Allows the display temperature to be adjusted +/- 72°F when working with higher mass tips, where the temperature reading can be affected by the mass of the tip.
- Auto-Off Time: Allows programming the number of minutes of inactivity (1 – 99), before the station powers off automatically.
