

SONY

CXA2547Q

2-band Electronic Volume

Description

The CXA2547Q is a 2-channel electronic volume IC. A 34-bit serial data input controls the level and characteristics of the output signal. It may be used in car stereos and general audio systems.

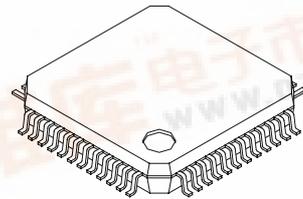

Features

- Loudness
- Volume control
(from 0 dB to -80 dB, -∞ dB : Fine (1 dB-step)
Coarse (8 dB-step)
- Balance
- Tone control
(2-band, 2 dB-step from -15 dB to +15 dB)
- Fader
2 dB-step to -20 dB, -25 dB, -35 dB, -45 dB, -60 dB, -∞ dB)
- Input and gain selector (4 channels)
- Serial data control (DATA, CLK, CE)
- Single 8 V power supply
- Zero-cross detection circuit
(L/R independent operation for the volume block)
- Timer
- Power-off mute
- Countermeasure to the noise of the portable telephone

Structure

Bipolar silicon monolithic IC

48 pin QFP (Plastic)

Absolute Maximum Ratings (Ta=25 °C)

• Supply voltage	V _{cc}	13	V
• Operating temperature	T _{opr}	-40 to +85	°C
• Storage temperature	T _{stg}	-65 to +150	°C
• Allowable power dissipation	P _d	350	mW
			(Ta=85 °C)

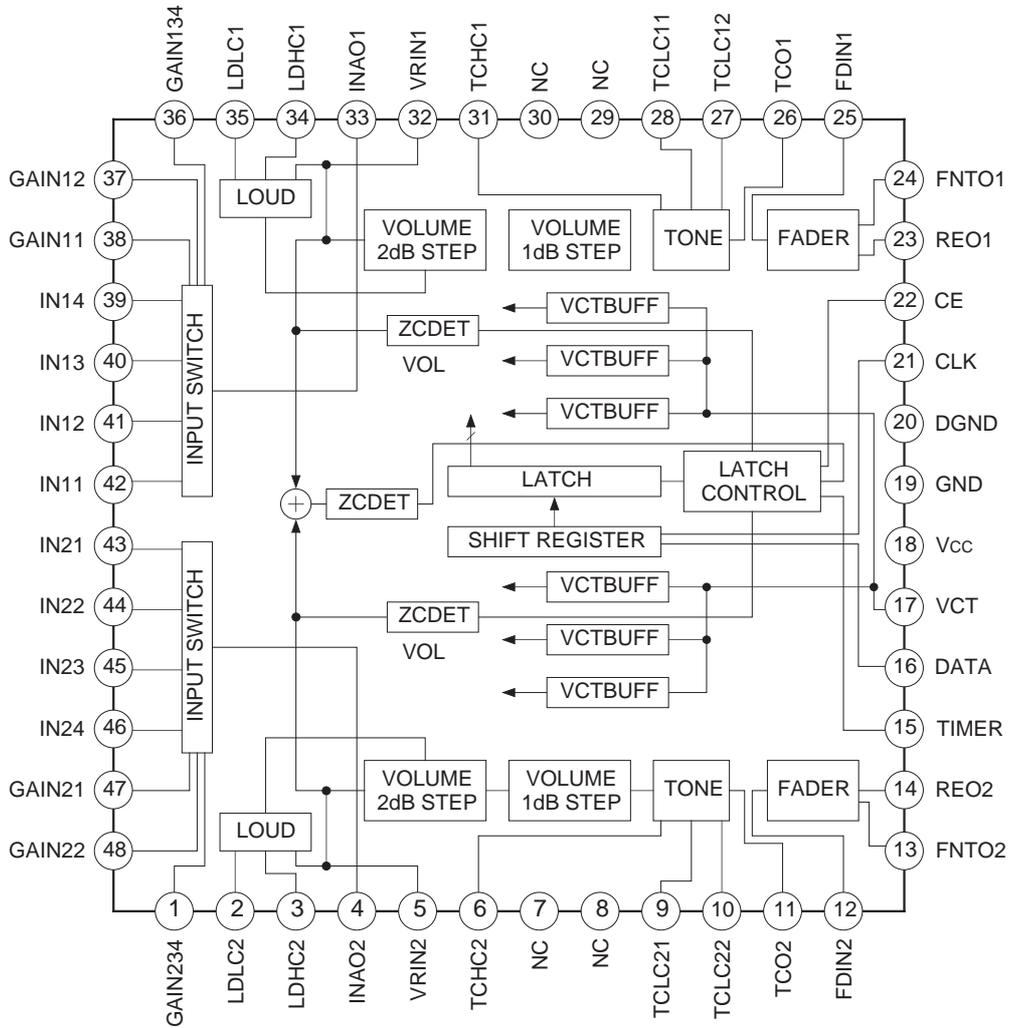

Recommended Operating Conditions

Supply voltage	V _{cc}	7 to 12	V
----------------	-----------------	---------	---

RESET

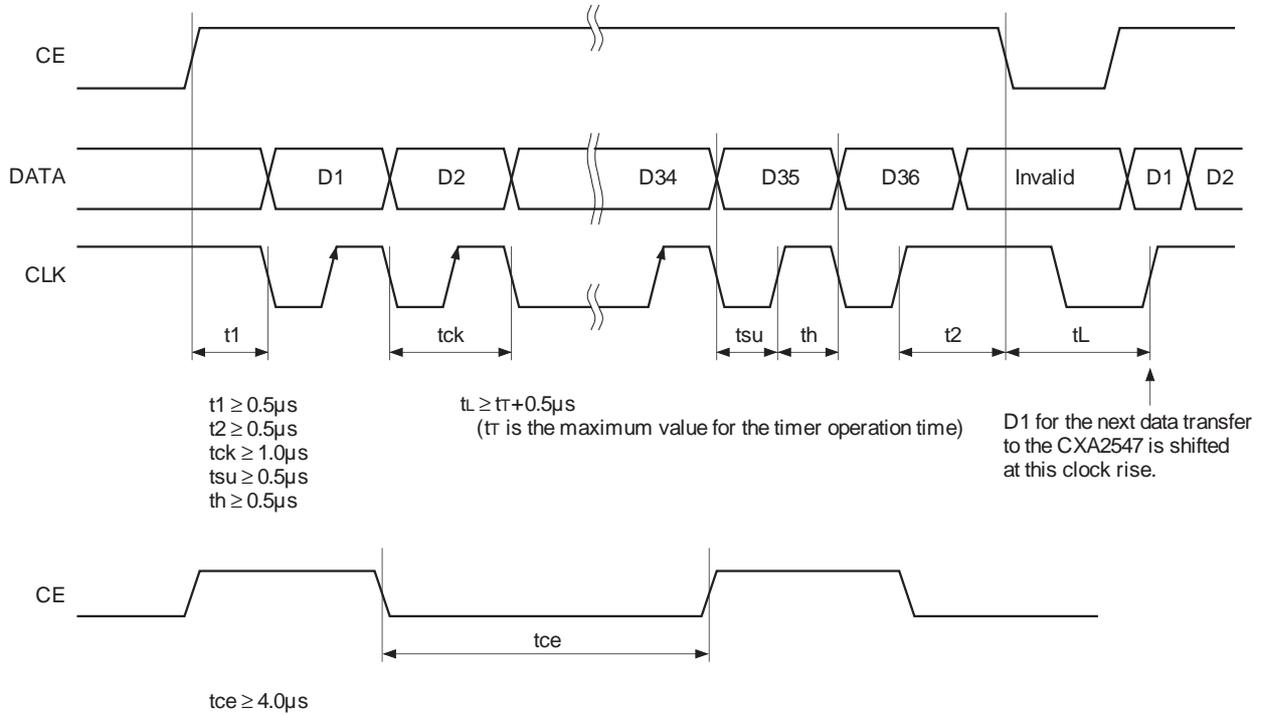

Reset is performed automatically when power is first supplied to the IC; there is no reset pin.

The following table shows the respective statuses of various settings after a reset has been performed.

Mode	Set value
INPUT	1
VRC1	$-\infty$ dB
VRF1	-1 dB
VRC2	$-\infty$ dB
VRF2	-1 dB
LOUD	OFF
TONE BASS	0 dB
TONE MID	0 dB
TONE TREBLE	0 dB
FADER	0 dB, REAR

* Set all the transfer data to "0" for D24, D25, D26 and D27.

Timing Chart

Timer Waiting Period Setting Chart ($V_{cc}=7$ to 12 V, operating temperature= -40 °C to 85 °C)

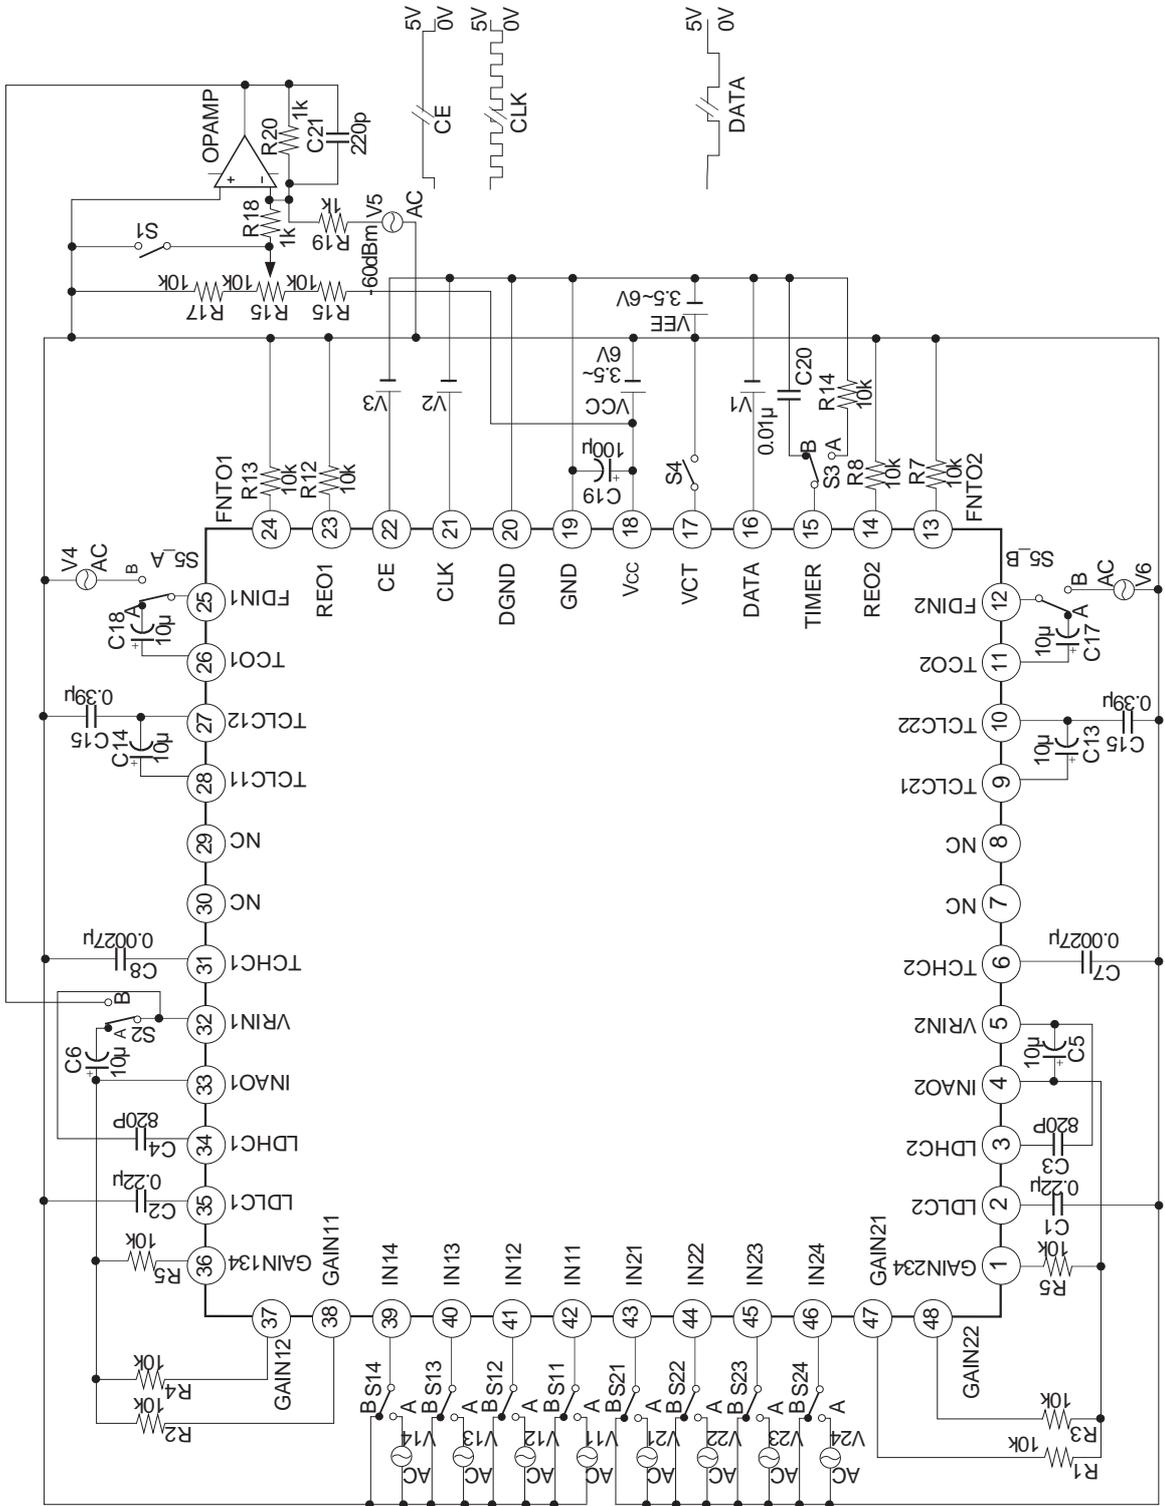

TIMER pin capacitance C	Waiting period		
	Min.	Typ.	Max.
C=100 pF	3 μs	5 μs	9 μs
C=0.001 μF	30 μs	50 μs	90 μs
C=0.01 μF	300 μs	500 μs	900 μs

Electrical Characteristics Measurement Circuit

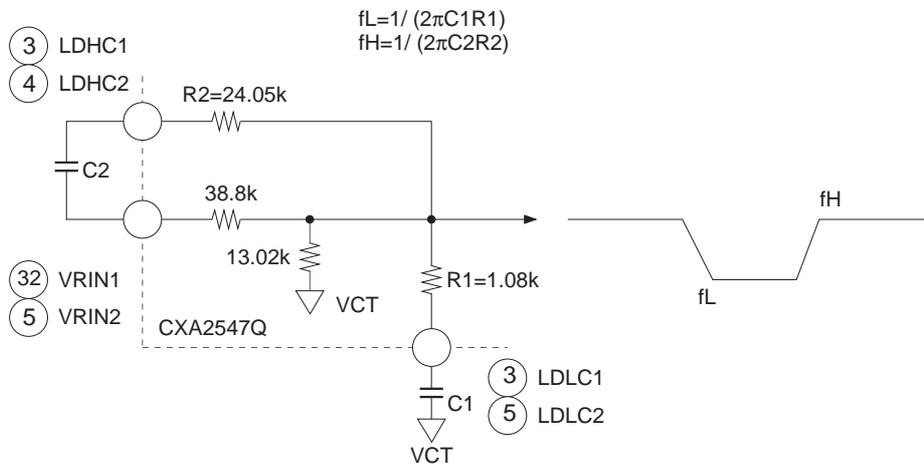

Description of Operation

(1) Input amplifier gain

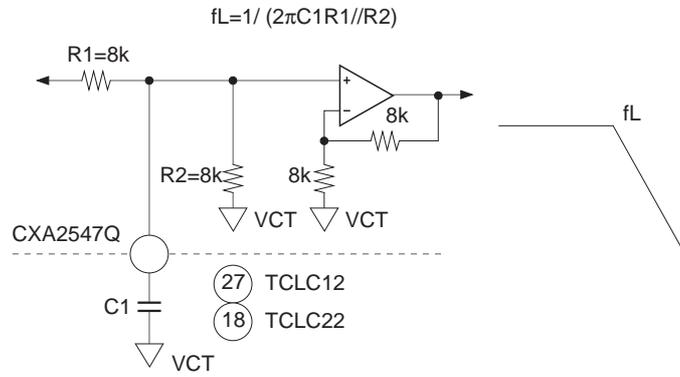

(2) LOUD

The loudness function achieves the necessary frequency response by using a filter as shown below. The resistors are built in this IC so that f_L and f_H can be set by selecting C1 and C2.

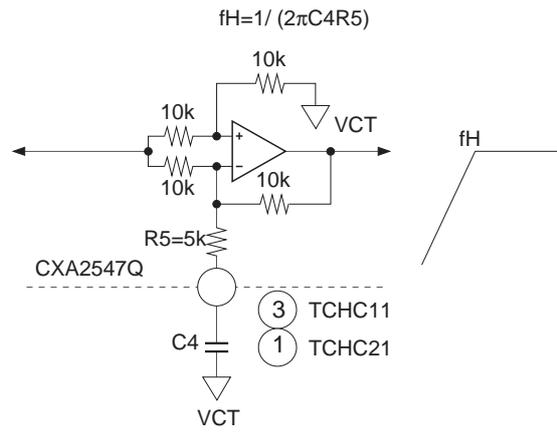

(3) Tone control

BASS : LPF

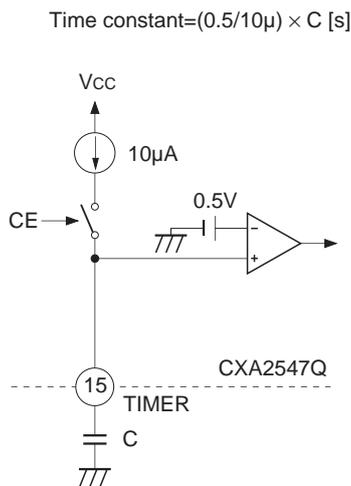

TREBLE : HPF

(4) Zero-cross detector and timer

A built-in zero-cross detection circuit is used to detect the zero-cross points of the input signal. When data arrived at the IC, they are executed at the next zero-cross point or when there is no input signal. This is to minimize 'click' noise during the transition of levels.

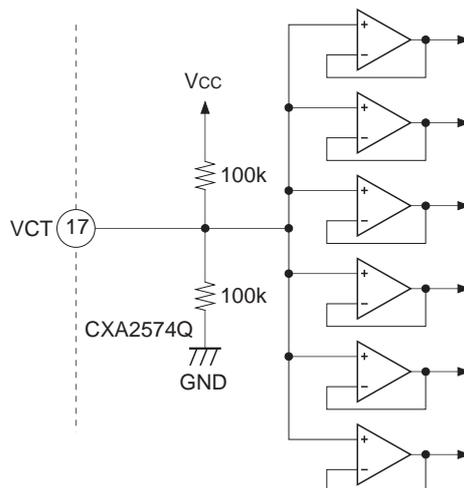

The timer circuit is added to ensure that the data is executed even when a zero-cross point is not detected after a certain period of time from the falling edge of the CE pulse.

(5) VCT pin

The internal circuit of VCT pin has the following structure.

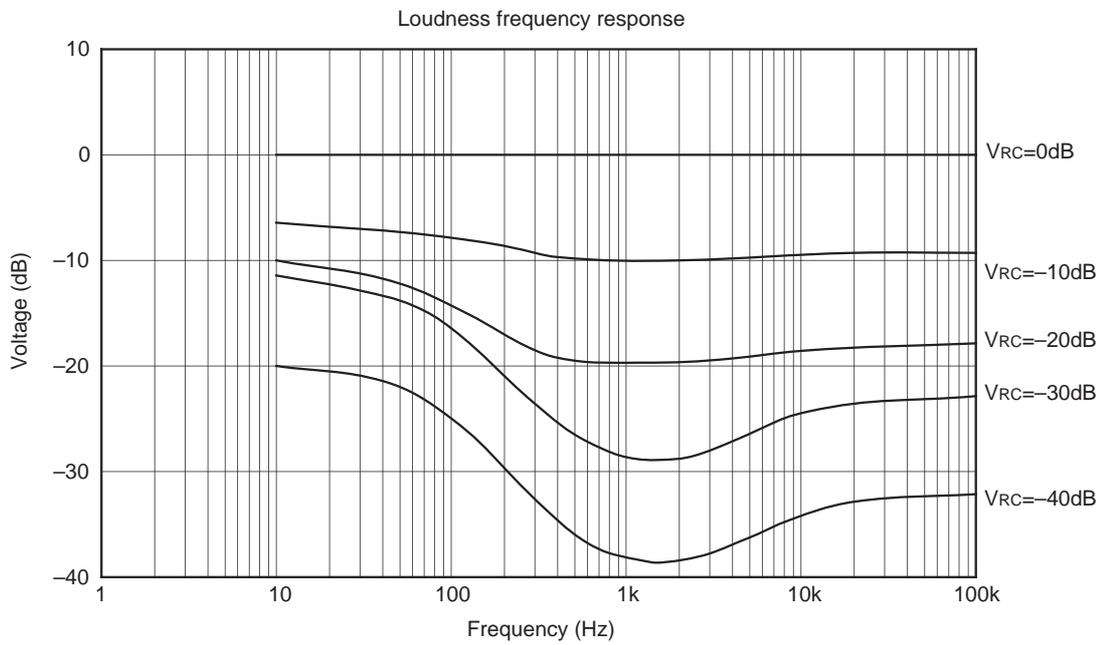

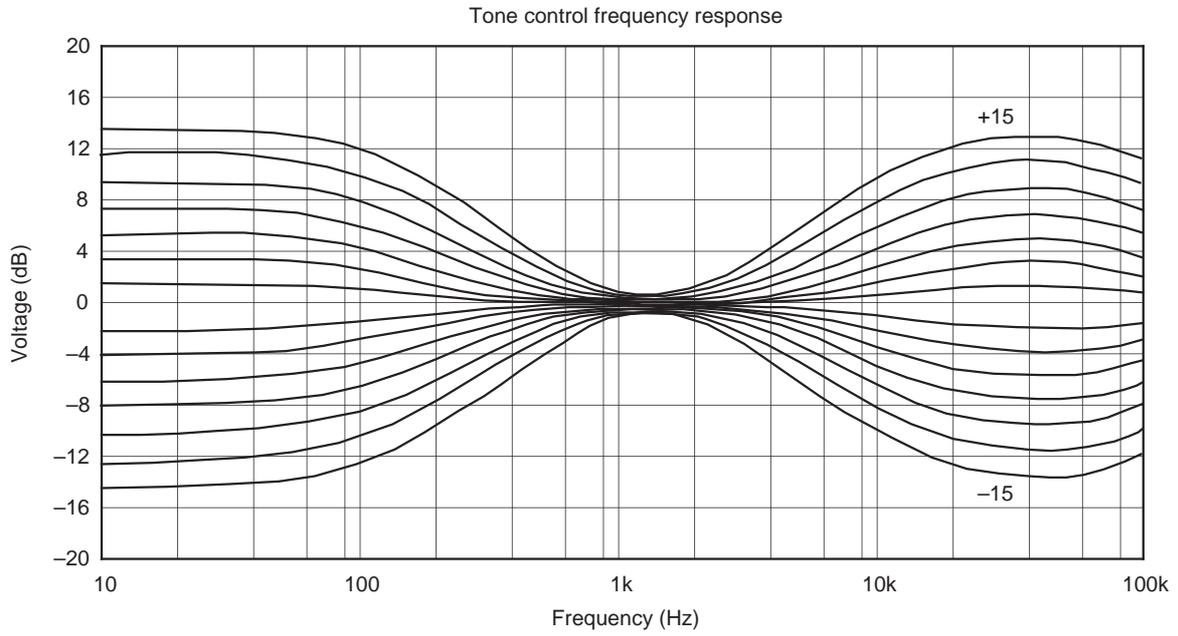

Insert a buffer when using the pin as a reference voltage for an external circuit.

(6) Power-off mute

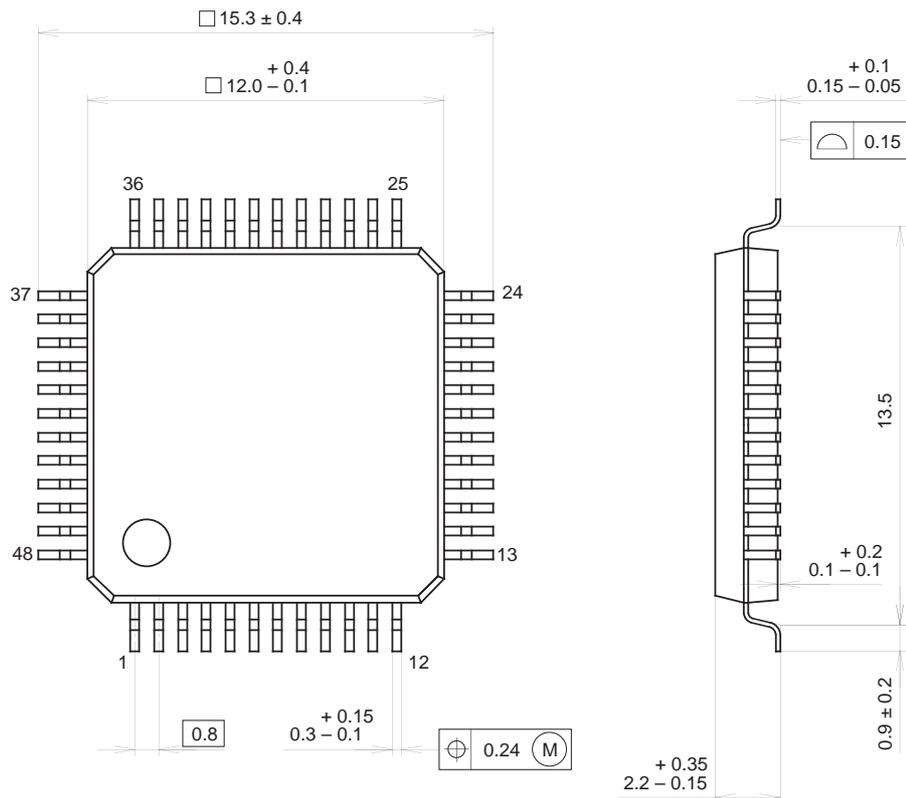

When V_{cc} goes below 5 V, the output stage bias of the fader output pins FNT01, FNT02, REO1, and REO2 is turned off and the pins go to high impedance. This operation prevents popping noises caused by the output pin potential deviating from $V_{cc}/2$ when the power is turned off.

Example of Representative Characteristics

Package Outline Unit : mm

48PIN QFP (PLASTIC)

PACKAGE STRUCTURE

SONY CODE	QFP-48P-L04
EIAJ CODE	QFP048-P-1212
JEDEC CODE	_____

PACKAGE MATERIAL	EPOXY RESIN
LEAD TREATMENT	SOLDER / PALLADIUM PLATING
LEAD MATERIAL	42/COPPER ALLOY
PACKAGE MASS	0.7g

NOTE : PALLADIUM PLATING
 This product uses S-PdPPF (Sony Spec.-Palladium Pre-Plated Lead Frame).
