(V<sub>cc</sub> = 3.0V, T<sub>a</sub> = 27°C)

Item	Symbol	Conditions	Typ.	Unit
Input resistance	R <sub>in</sub>	f = 210.38MHz, V <sub>gctl</sub> = 1.5V	2.7	kΩ
Input capacitance	C <sub>in</sub>		1.3	pF

### Notes on Operation

- 1) This IC is a wideband amplifier with wide gain control range. The decoupling capacitors between GND Pin and V<sub>cc</sub> Pin should be as close to the IC as possible.
- 2) The resistors connected to Pins 5 and 6 should be as close to the IC as possible.
- 3) This IC assumes the excellent characteristics when the differential input impedance between Pins 2 and 3 is 500Ω. Refer to the Measurement Circuit for the external element settings, etc.
- 4) Pay attention to handling this IC because its electrostatic discharge strength is weak.
