

ZL30406 SONET/SDH Clock Multiplier PLL

Data Sheet

February 2005

Features

- Meets jitter requirements of Telcordia GR-253-CORE for OC-48, OC-12, and OC-3 rates
- Meets jitter requirements of ITU-T G.813 for STM-16, STM-4 and STM-1 rates
- Provides four LVPECL differential output clocks at 77.76 MHz
- Provides a CML differential clock programmable to 19.44 MHz, 38.88 MHz, 77.76 MHz and 155.52 MHz
- Provides a single-ended CMOS clock at 19.44 MHz
- Provides enable/disable control of output clocks
- Accepts a CMOS reference at 19.44 MHz
- 3.3 V supply

Applications

- SONET/SDH line cards
- Network Element timing cards

Description

The ZL30406 is an analog phase-locked loop (APLL) designed to provide rate conversion and jitter attenuation for SDH (Synchronous Digital Hierarchy) and SONET (Synchronous Optical Network) networking equipment. The ZL30406 generates very low jitter clocks that meet the jitter requirements of Telcordia GR-253-CORE OC-48, OC-12, OC-3, OC-1 rates and ITU-T G.813 STM-16, STM-4 and STM-1 rates.

The ZL30406 accepts a CMOS compatible reference at 19.44 MHz and generates four LVPECL differential output clocks at 77.76 MHz, a CML differential clock programmable to 19.44 MHz, 38.88 MHz, 77.76 MHz and 155.52 MHz and a single-ended CMOS clock at 19.44 MHz. The output clocks can be individually enabled or disabled.

Pin Description

Pin Description Table

Pin #	Name	Description
1	GND	Ground. 0 volt.
2	VCC1	Positive Analog Power Supply. +3.3 V ±10%
3	VCC	Positive Analog Power Supply. +3.3 V ±10%
4 5	OC-CLKoN OC-CLKoP	SONET/SDH Clock (CML Output). These outputs provide a programmable differential CML clock at 19.44 MHz, 38.88 MHz, 77.76 MHz and 155.52 MHz. The output frequency is selected with FS2 and FS1 pins.
6	GND	Ground. 0 volt
7	VCC2	Positive Analog Power Supply. +3.3 V ±10%
8	LPF	Low Pass Filter (Analog). Connect to this pin external RC network (R _F and C _F) for the low pass filter.
9	GND	Ground. 0 volt
10	GND	Ground. 0 volt
11	BIAS	Bias. See Figure 11 for the recommended bias circuit.

Pin Description Table (continued)

Pin #	Name	Description
12	OC-CLKoEN	SONET/SDH Clock Enable (CMOS Input). If tied high this control pin enables the OC-CLKoP/N differential driver. Pulling this input low disables the output clock without deactivating differential drivers.
13	C77oEN-A	C77 Clock Output Enable A (CMOS Input). If tied high this control pin enables the C77oP/N-A output clock. Pulling this input low disables the output clock without deactivating differential drivers.
14	C77oEN-B	C77 Clock Output Enable B (CMOS Input). If tied high this control pin enables the C77oP/N-B output clock. Pulling this input low disables the output clock without deactivating differential drivers.
15	C77oEN-C	C77 Clock Output Enable C (CMOS Input). If tied high this control pin enables the C77oP/N-C output clock. Pulling this input low disables the output clock without deactivating differential drivers.
16	C77oEN-D	C77 Clock Output Enable D (CMOS Input). If tied high this control pin enables the C77oP/N-D output clock. Pulling this input low disables the output clock without deactivating differential drivers.
17	GND	Ground. 0 volt
18	VDD	Positive Digital Power Supply. +3.3 V \pm 10%
19	NC	No internal bonding Connection. Leave unconnected.
20	NC	No internal bonding Connection. Leave unconnected.
21	NC	No internal bonding Connection. Leave unconnected.
22	VDD	Positive Digital Power Supply. +3.3 V \pm 10%
23	IC	Internal Connection. Connect this pin to Ground (GND).
24	FS2	Frequency Select 2-1 (CMOS Input). These inputs program the clock frequency on the OC-CLKo output. The possible output frequencies are 19.44 MHz (00), 38.88 MHz (01), 77.76 MHz (10), 155.52 MHz (11).
25	FS1	
26	C19oEN	C19o Output Enable (CMOS Input). If tied high this control pin enables the C19o output clock. Pulling this pin low forces output driver into a high impedance state.
27	GND	Ground. 0 volt
28	C19i	C19 Reference Input (CMOS Input). This pin is a single-ended input reference source used for synchronization. This pin accepts 19.44 MHz.
29	VDD	Positive Digital Power Supply. +3.3 V \pm 10%
30	GND	Ground. 0 volt
31	NC	No internal bonding Connection. Leave unconnected.
32	GND	Ground. 0 volt.
33	GND	Ground. 0 volt
34	VDD	Positive Digital Power Supply. +3.3 V \pm 10%
35	C19o	C19 Clock Output (CMOS Output). This pin provides a single-ended CMOS clock at 19.44 MHz.

Pin Description Table (continued)

Pin #	Name	Description
36	GND	Ground. 0 volt
37	NC	No internal bonding Connection. Leave unconnected.
38	GND	Ground. 0 volt
39	GND	Ground. 0 volt
40	NC	No internal bonding Connection. Leave unconnected.
41	GND	Ground. 0 volt
42	VDD	Positive Digital Power Supply. +3.3 V \pm 10%
43	GND	Ground. 0 volt
44	VCC	Positive Analog Power Supply. +3.3 V \pm 10%
45	GND	Ground. 0 volt
46	VDD	Positive Digital Power Supply. +3.3 V \pm 10%
47	VCC	Positive Analog Power Supply. +3.3 V \pm 10%
48	GND	Ground. 0 volt
49	VCC	Positive Analog Power Supply. +3.3 V \pm 10%.
50 51	C77oN-D C77oP-D	C77 Clock Output (LVPECL Output). These outputs provide a differential LVPECL clock at 77.76 MHz. Unused LVPECL port should be left unterminated to decrease supply current.
52	GND	Ground. 0 volt
53	VCC	Positive Analog Power Supply. +3.3 V \pm 10%.
54 55	C77oP-C C77oN-C	C77 Clock Output (LVPECL Output). These outputs provide a differential LVPECL clock at 77.76 MHz. Unused LVPECL port should be left unterminated to decrease supply current.
56	GND	Ground. 0 volt
57	VCC	Positive Analog Power Supply. +3.3 V \pm 10%.
58 59	C77oN-B C77oP-B	C77 Clock Output (LVPECL Output). These outputs provide a differential LVPECL clock at 77.76 MHz. Unused LVPECL port should be left unterminated to decrease supply current.
60	GND	Ground. 0 volt
61	VCC	Positive Analog Power Supply. +3.3 V \pm 10%.
62 63	C77oP-A C77oN-A	C77 Clock Output (LVPECL Output). These outputs provide a differential LVPECL clock at 77.76 MHz. Unused LVPECL port should be left unterminated to decrease supply current.
64	GND	Ground. 0 volt
65	EP_GND	Exposed die Pad Ground. 0 volt (connect to GND)

1.0 Functional Description

The ZL30406 is an analog phased-locked loop which provides rate conversion and jitter attenuation for SONET/SDH OC-48/STM-16, OC-12/STM-4 and OC-3/STM-1 applications. A functional block diagram of the ZL30406 is shown in Figure 1 and a brief description is presented in the following sections.

1.1 Frequency/Phase Detector

The Frequency/Phase Detector compares the frequency/phase of the input reference signal with the feedback signal from the Frequency Divider circuit and provides an error signal corresponding to the frequency/phase difference between the two. This error signal is passed to the Loop Filter circuit and averaged to control the VCO frequency.

1.2 Loop Filter

The Loop Filter is a low pass filter. This low pass filter ensures that the network jitter requirements are met for an input reference frequency of 19.44 MHz. The corner frequency of the Loop Filter is configurable with an external capacitor and resistor connected to the LPF pin and ground as shown below.

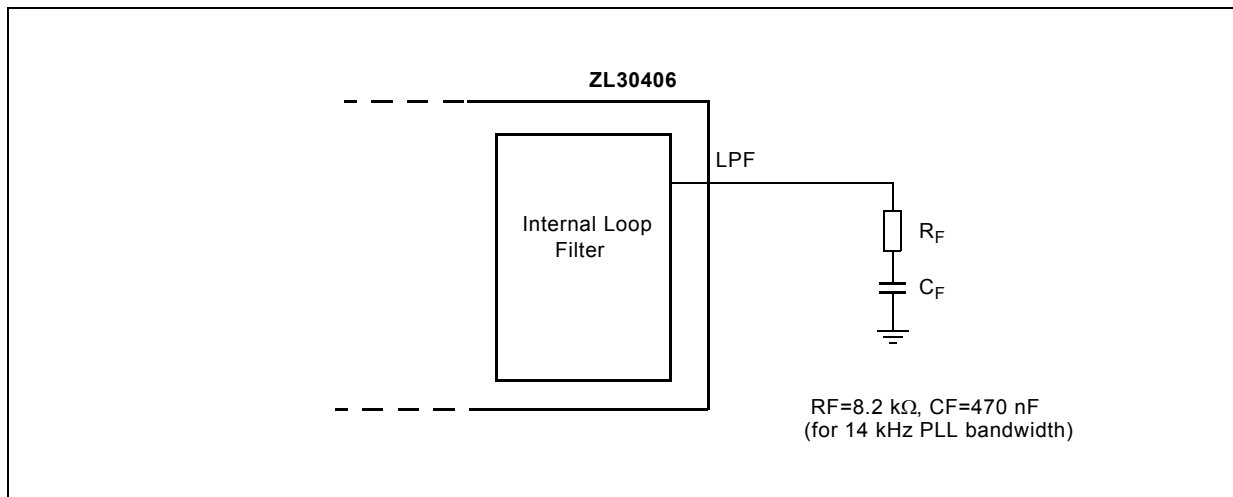

Figure 3 - External Loop Filter

1.3 VCO

The voltage-controlled oscillator (VCO) receives the filtered error signal from the Loop Filter, and based on the voltage of the error signal, generates a primary frequency. The VCO output is connected to the Output Interface Circuit that divides VCO frequency and buffers generated clocks.

1.4 Output Interface Circuit

The output of the VCO is used by the Output Interface Circuit to provide four LVPECL differential clocks at 77.76 MHz, one programmable CML differential clock (19.44 MHz, 38.88 MHz, 77.76 MHz, 155.52 MHz) controlled with FS1-2 pins and a single-ended 19.44 MHz output clock. This block provides also a 19.44 MHz feedback clock that closes PLL loop. Each output clock can be enabled or disabled individually with the associated Output Enable pin.

Output Clocks	Output Enable Pins
C77oP/N-A	C77oEN-A
C77oP/N-B	C77oEN-B
C77oP/N-C	C77oEN-C
C77oP/N-D	C77oEN-D
OC-CLKoP/N	OC-CLKoEN
C19o	C19oEN

Table 1 - Output Enable Control

To reduce power consumption and achieve the lowest possible intrinsic jitter the unused output clocks must be disabled. If any of the LVPECL outputs are disabled they must be left open without any terminations.

The output clock frequency of the OC-CLKo CML differential output clock is selected with FS1-2 pins as shown in the following table.

FS2	FS1	OC-CLKo Frequency
0	0	19.44 MHz
0	1	38.88 MHz
1	0	77.76 MHz
1	1	155.52 MHz

Table 2 - OC-CLKo Clock Frequency Selection

2.0 Applications

2.1 Ultra-Low Jitter SONET/SDH Equipment Clocks

The ZL30406 functionality and performance complements the entire family of the Zarlink's advanced network synchronization PLLs. Its superior jitter filtering characteristics exceed requirements of SONET/SDH optical interfaces operating at OC-48/STM-16 rate (2.5 Gbit/s). The ZL30406 in combination with the MT90401 or the ZL30407 (SONET/SDH Network Element PLLs) provides the core building blocks for high quality equipment clocks suitable for network synchronization (see Figure 4).

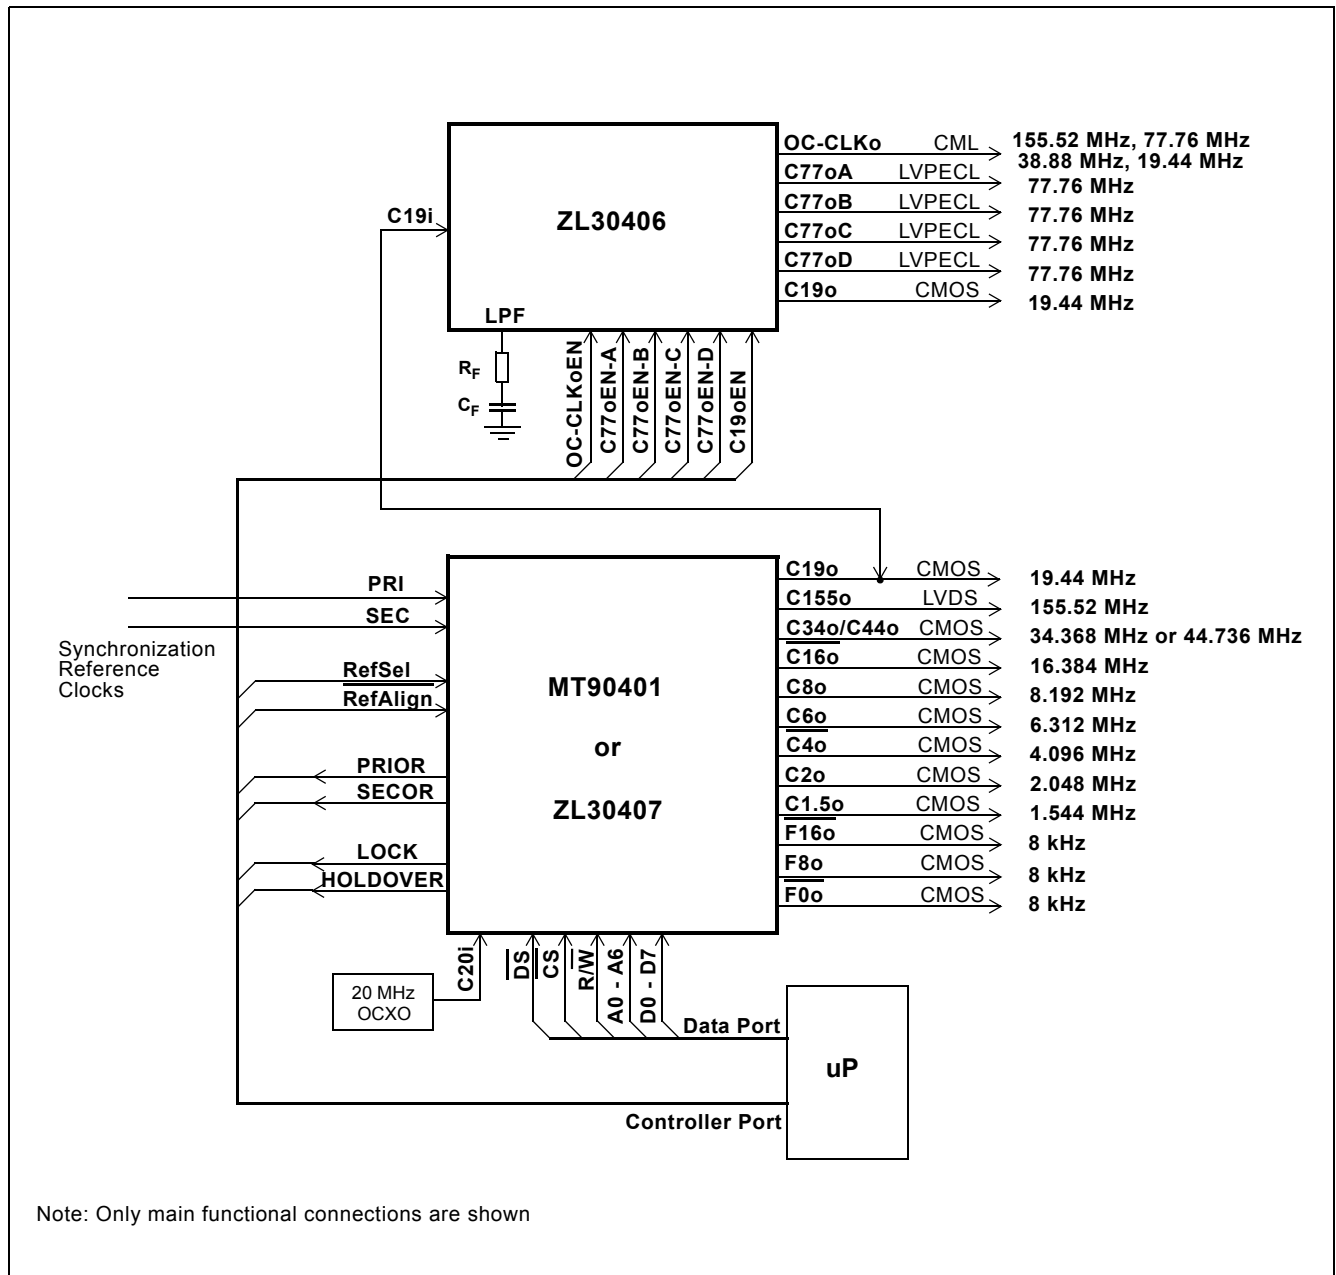

Figure 4 - SONET/SDH Equipment Timing Card

The ZL30406 in combination with the MT9046 provides an optimum solution for SONET/SDH line cards (see Figure 5).

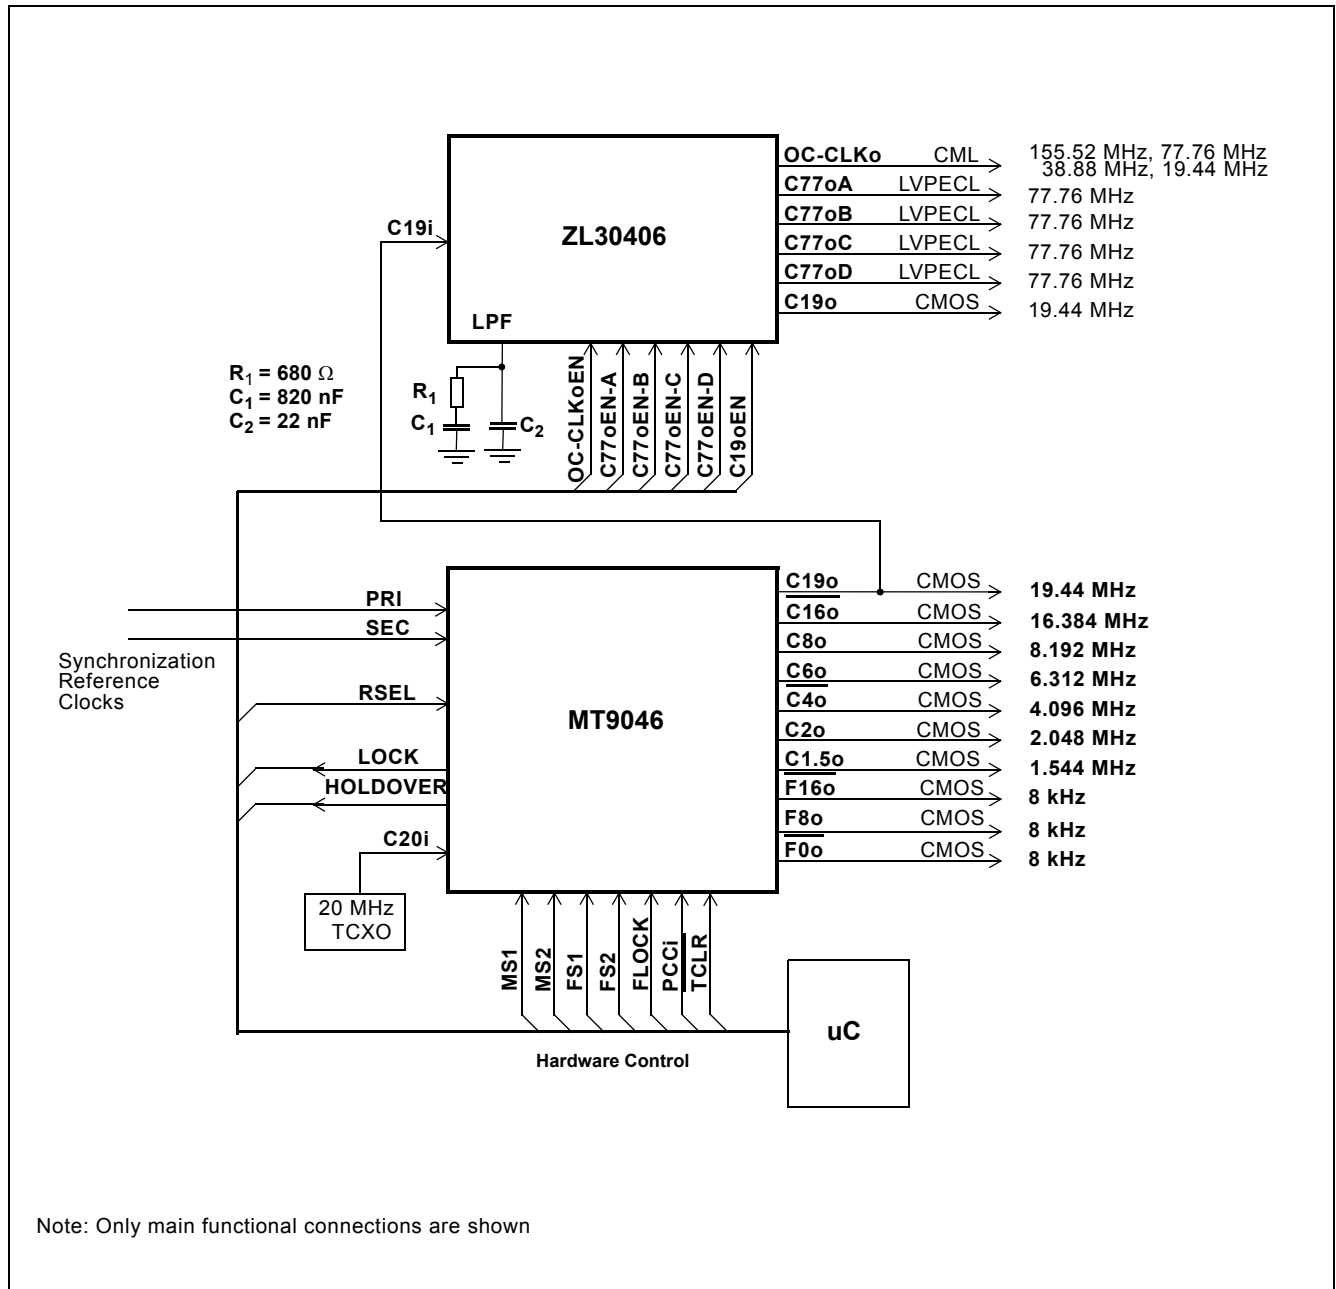

Figure 5 - SONET/SDH Line Card

2.2 Recommended Interface circuit

2.2.1 LVPECL to LVPECL Interface

The C77oP/N-A, C77oP/N-B, C77oP/N-B, and C77oP/N-D outputs provide differential LVPECL clocks at 77.76 MHz. The LVPECL output drivers require a 50 Ω termination connected to the VCC-2V source for each output terminal at the terminating end as shown below. The terminating resistors should be placed as close as possible to the LVPECL receiver.

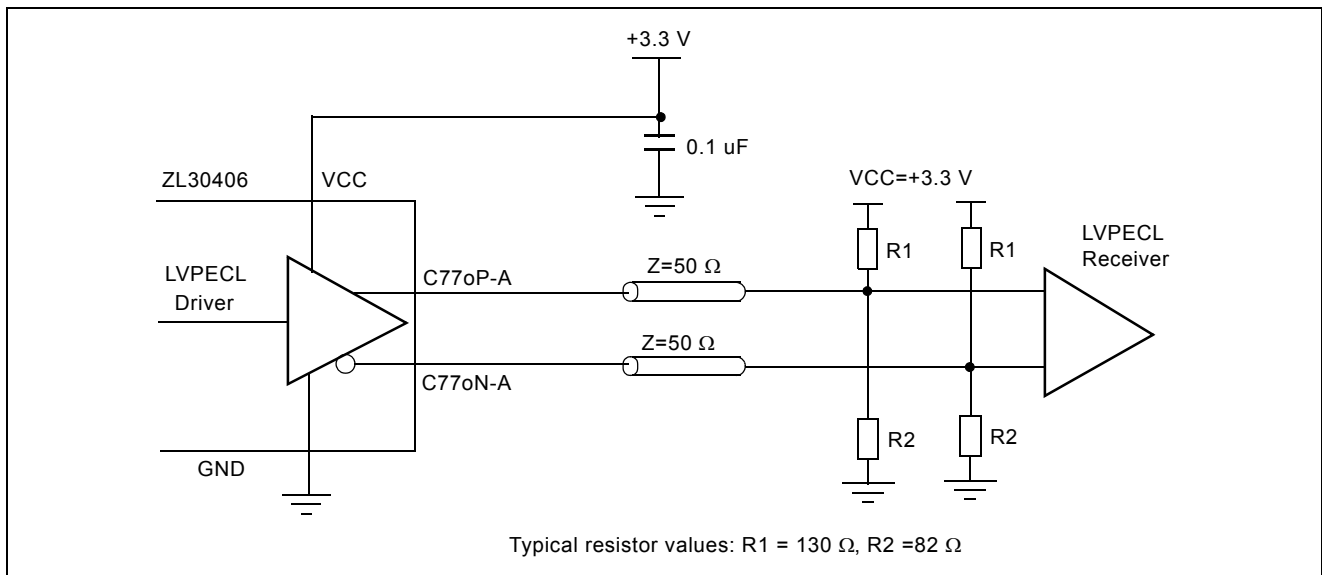

Figure 6 - LVPECL to LVPECL Interface

2.2.2 CML to CML Interface

The CMLP/N output provides a differential CML/LVDS compatible clock at 19.44 MHz, 38.88 MHz, 77.76 MHz, 155.52 MHz selected with FS1-2 pins. The output drivers require a 50 Ω load at the terminating end if the receiver is CML type.

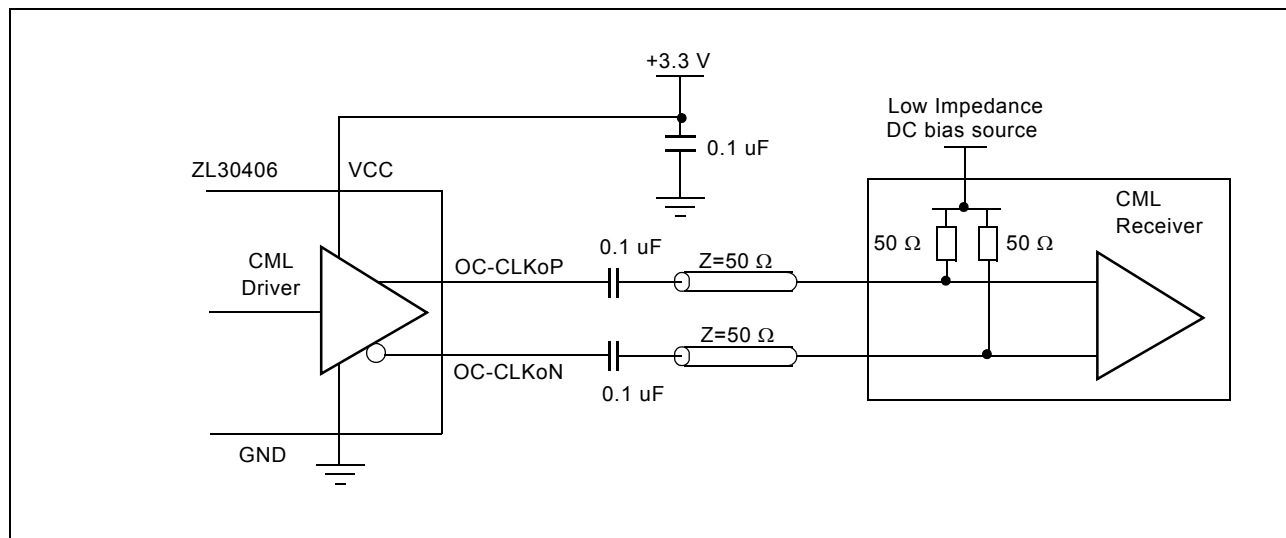

Figure 7 - CML to CML Interface

2.2.3 CML to LVDS Interface

To configure the driver as an LVDS driver, external biasing resistors are required to set up the common mode voltage as specified by ANSI/TIA/EIA-644 LVDS standard. The standard specifies the V_{CM} (common mode voltage) as minimum 1.125 V, typical 1.2 V, and maximum 1.375 V. The following figure provides a recommendation for LVDS applications.

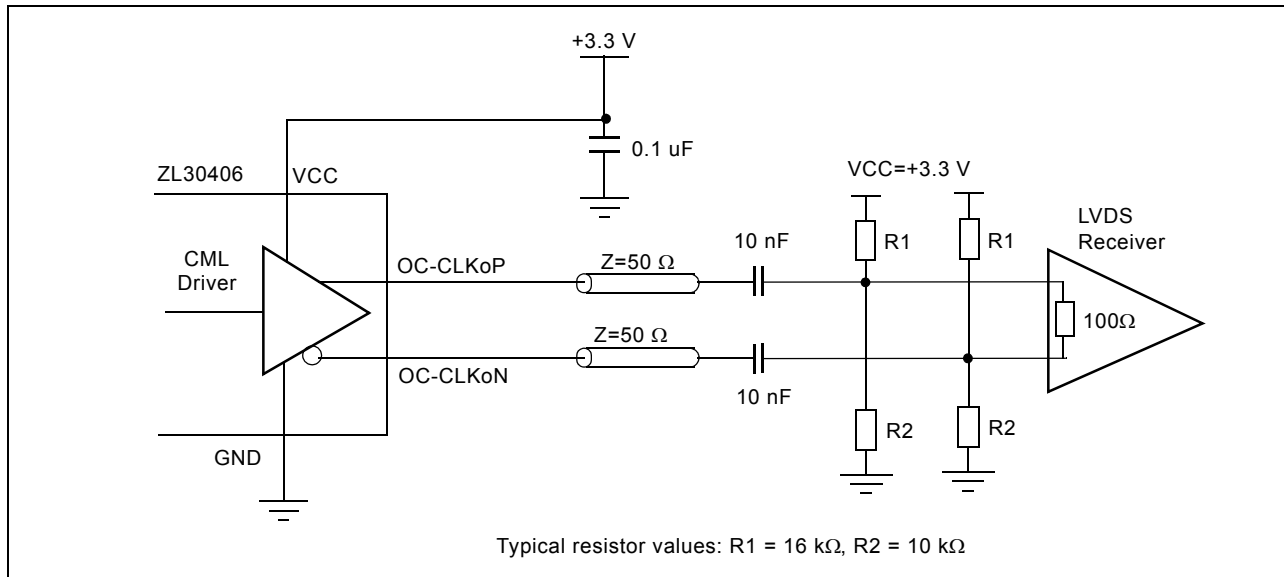

Figure 8 - LVDS Termination

2.2.4 CML to LVPECL Interface

In the case when more than four 77.76 MHz clocks are required to drive LVPECL receivers then the unused OC-CLKo clock (CML output) can be configured to output the 77.76 MHz clock and interface to the LVPECL receiver as is shown in the Figure 9. The terminating resistors should be placed as close as possible to the LVPECL receiver.

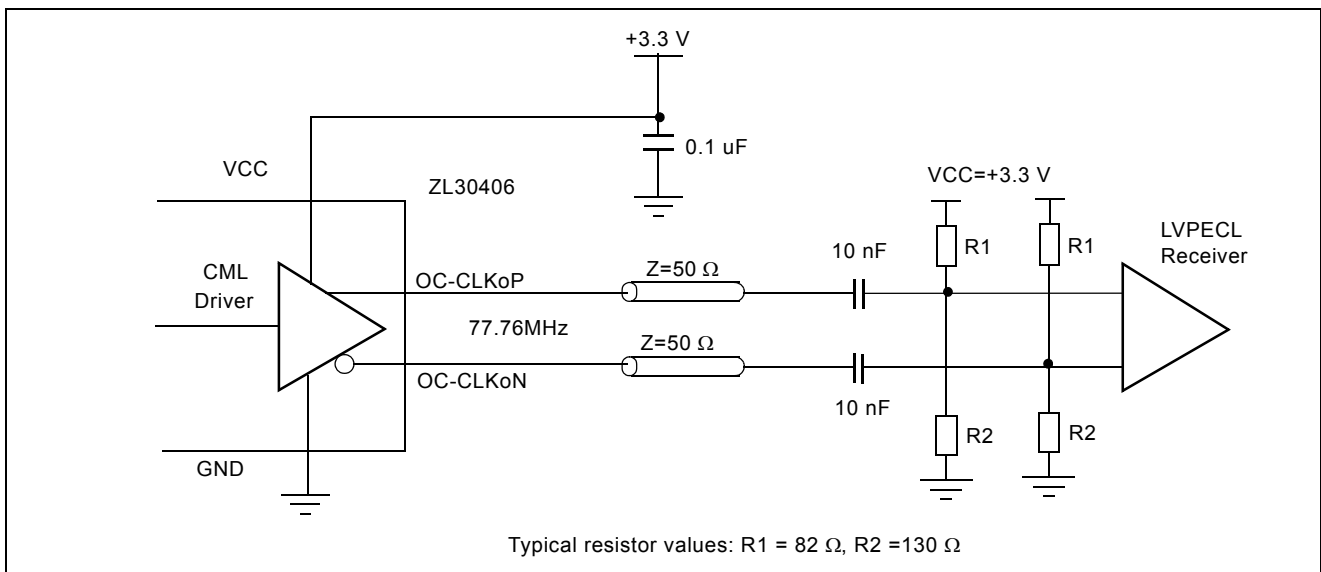

Figure 9 - CML to LVPECL Interface

2.3 Tristating LVPECL Outputs

The ZL30406 has four differential 77.76 MHz LVPECL outputs, which can be used to drive four different OC-3/OC-12/OC-48 devices such as framers, mappers and SERDES. In the case where fewer than four clocks are required, a user can disable unused LVPECL outputs on the ZL30406 by pulling the corresponding enable pins low. When disabled, voltage at the both pins of the differential LVPECL output will be pulled up to $V_{cc} - 0.7$ V.

For applications requiring the LVPECL outputs to be in a tri-state mode, external AC coupling capacitors can be used as shown in Figure 10. Typically this might be required in hot swappable applications.

Resistors R1 and R2 are required for DC bias of the LVPECL driver. Capacitors C1 and C2 are used as AC coupling capacitors. During disable mode (C77oEN pin pulled low) those capacitors present infinite impedance to the DC signal and to the receiving device this looks like a tristated (High-Z) output. Resistors R3, R4, R5 and R6 are used to terminate the transmission line with 50 ohm impedance and to generate DC bias voltage for the LVPECL receiver. If the LVPECL receiver has an integrated 50 ohm termination and bias source, resistors R3, R4, R5 and R6 should not be populated.

Figure 10 - Tristatable LVPECL Outputs

2.4 Power Supply and BIAS Circuit Filtering Recommendations

Figure 11 presents a complete filtering arrangement that is recommended for applications requiring maximum jitter performance. The level of required filtering is subject to further optimization and simplification. Please check Zarlink's web site for updates.

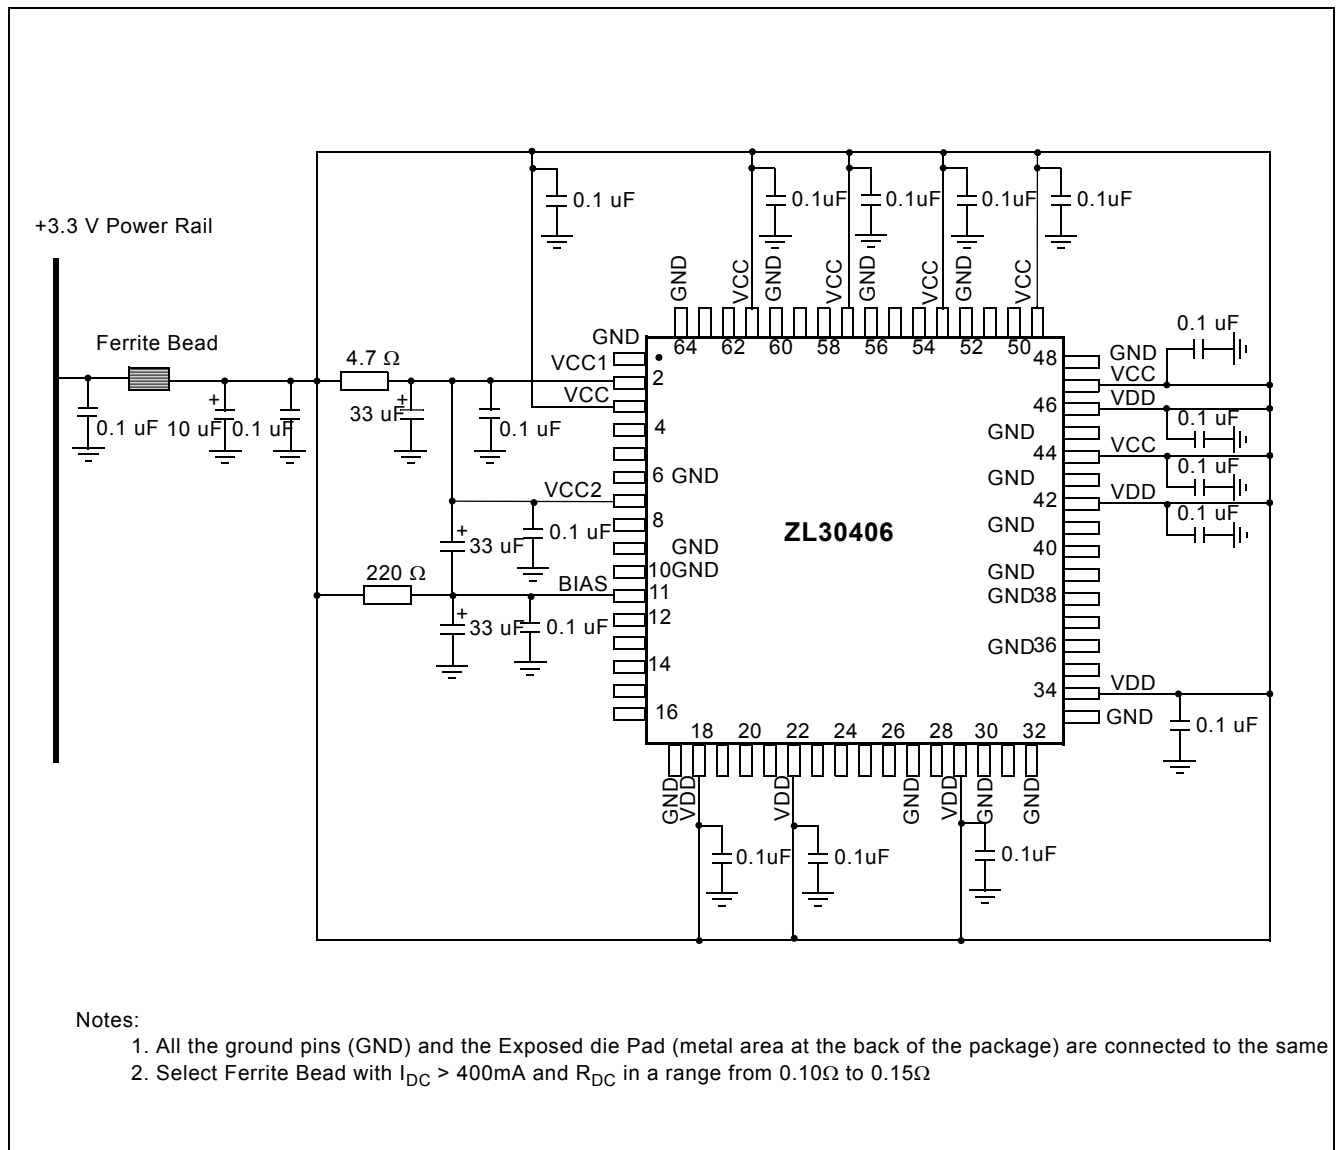

Figure 11 - Power Supply and BIAS circuit filtering

3.0 Characteristics

Absolute Maximum Ratings[†]

	Characteristics	Sym	Min. [‡]	Max. [‡]	Units
1	Supply voltage	V_{DDR}, V_{CCR}	TBD	TBD	V
2	Voltage on any pin	V_{PIN}	-0.5	$V_{CC} + 0.5$ $V_{DD} + 0.5$	V
3	Current on any pin	I_{PIN}	-0.5	30	mA
4	ESD Rating	V_{ESD}		1500	V
5	Storage temperature	T_{ST}	-55	125	°C
6	Package power dissipation	P_{PD}		1.8	W

[†] Voltages are with respect to ground unless otherwise stated.

[‡] Exceeding these values may cause permanent damage. Functional operation under these conditions is not implied.

Recommended Operating Conditions[†]

	Characteristics	Sym.	Min.	Typ. [‡]	Max.	Units	Notes
1	Operating Temperature	T_{OP}	-40	25	+85	°C	
2	Positive Supply	V_{DD}, V_{CC} V_{CC_VCO}	3.0	3.3	3.6	V	

[†] Voltages are with respect to ground unless otherwise stated.

[‡] Typical figures are for design aid only; not guaranteed and not subject to production testing.

[‡]

DC Electrical Characteristics[†]

	Characteristics	Sym.	Min.	Typ. [‡]	Max.	Units	Notes
1	Supply Current	$I_{DD}+I_{CC}$		140	155	mA	LVPECL, CML drivers disabled and unterminated
2	Incremental Supply Current to single LVPECL driver (driver enabled and terminated, see Figure 6)	I_{LVPECL}		40		mA	Note 1,2
3	Incremental Supply Current to CML driver (driver enabled and terminated, see Figure 7)	I_{CML}		24		mA	Note 3
4	CMOS: High-level input voltage	V_{IH}	$0.7V_{DD}$		V_{DD}	V	
5	CMOS: Low-level input voltage	V_{IL}	0		$0.3V_{DD}$	V	
6	CMOS: Input leakage current, C19i	I_{IL}		1		uA	$V_I = V_{DD}$ or 0V

DC Electrical Characteristics† (continued)

	Characteristics	Sym.	Min.	Typ.‡	Max.	Units	Notes
7	CMOS: Input bias current for pulled-down inputs: FS1, FS2, C77oEN-A, C77oEN-C, C77oEN-D, OC-CLKoEN	I_{B-PU}		300		uA	$V_I = V_{DD}$
8	CMOS: Input bias current for pulled-up inputs: , C77oEN-B, C19o_EN	I_{B-PD}		90		uA	$V_I = 0V$
9	CMOS: High-level output voltage	V_{OH}	2.4			V	$I_{OH} = 8\text{ mA}$
10	CMOS: Low-level output voltage	V_{OL}			0.4	V	$I_{OL} = 4\text{ mA}$
11	CMOS: C19o output rise time (18pF)	T_R		1.8	3.3	ns	18 pF load
12	CMOS: C19o output fall time (18pF)	T_F		1.1	1.4	ns	18 pF load

15	LVPECL: Output rise/fall times	T_{RF}		260		ps	Note 2
16	CML: Differential output voltage	$ V_{OD_CML} $		0.70		V	Note 3
17	CML: Offset voltage (Also referred to as common mode voltage)	V_{OS_CML}	Vcc-0.58	Vcc-0.54	Vcc-0.50	V	Note 3
18	CML: Output rise/fall times	T_{RF}		120		ps	Note 3

† : Voltages are with respect to ground unless otherwise stated.

‡ : Typical figures are for design aid only: not guaranteed and not subject to production testing.

Note: Supply voltage and operating temperature are as per Recommended Operating Conditions

Note 1: The I_{LVPECL} current is determined by termination network connected to LVPECL outputs. More than 25% of this current flows outside the chip and it does not contribute to the internal power dissipation.

Note 2: LVPECL outputs terminated with $Z_T = 50\ \Omega$ resistors biased to $V_{CC}-2V$ (see Figure 6)

Note 3: CML outputs terminated with $Z_T = 50\ \Omega$ resistors connected to low impedance DC bias voltage source (see Figure 7)

AC Electrical Characteristics[†] - Output Timing Parameters Measurement Voltage Levels

Information relating to products and services furnished herein by Zarlink Semiconductor Inc. or its subsidiaries (collectively "Zarlink") is believed to be reliable. However, Zarlink assumes no liability for errors that may appear in this publication, or for liability otherwise arising from the application or use of any such information, product or service or for any infringement of patents or other intellectual property rights owned by third parties which may result from such application or use. Neither the supply of such information or purchase of product or service conveys any license, either express or implied, under patents or other intellectual property rights owned by Zarlink or licensed from third parties by Zarlink, whatsoever. Purchasers of products are also hereby notified that the use of product in certain ways or in combination with Zarlink, or non-Zarlink furnished goods or services may infringe patents or other intellectual property rights owned by Zarlink.

This publication is issued to provide information only and (unless agreed by Zarlink in writing) may not be used, applied or reproduced for any purpose nor form part of any order or contract nor to be regarded as a representation relating to the products or services concerned. The products, their specifications, services and other information appearing in this publication are subject to change by Zarlink without notice. No warranty or guarantee express or implied is made regarding the capability, performance or suitability of any product or service. Information concerning possible methods of use is provided as a guide only and does not constitute any guarantee that such methods of use will be satisfactory in a specific piece of equipment. It is the user's responsibility to fully determine the performance and suitability of any equipment using such information and to ensure that any publication or data used is up to date and has not been superseded. Manufacturing does not necessarily include testing of all functions or parameters. These products are not suitable for use in any medical products whose failure to perform may result in significant injury or death to the user. All products and materials are sold and services provided subject to Zarlink's conditions of sale which are available on request.

Purchase of Zarlink's I²C components conveys a licence under the Philips I²C Patent rights to use these components in and I²C System, provided that the system conforms to the I²C Standard Specification as defined by Philips.
