#### description/ordering information

The 'LVTH162244 devices are 16-bit buffers and line drivers designed for low-voltage (3.3-V) V<sub>CC</sub> operation, but with the capability to provide a TTL interface to a 5-V system environment. These devices can be used as four 4-bit buffers, two 8-bit buffers, or one 16-bit buffer. These devices provide true outputs and symmetrical active-low output-enable ( $\overline{OE}$ ) inputs.

#### **ORDERING INFORMATION**

<sup>†</sup> Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Widebus is a trademark of Texas Instruments.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

 $Copyright @ 2003, Texas Instruments Incorporated \\ On products compliant to MIL-PRF-3853s, all parameters are tested \\ unless otherwise noted. On all other products, production \\ processing does not necessarily include testing of all parameters. \\ \label{eq:stars}$ 

### SN54LVTH162244, SN74LVTH162244 3.3-V ABT 16-BIT BUFFERS/DRIVERS WITH 3-STATE OUTPUTS SCBS258M - JUNE 1993 - REVISED SEPTEMBER 2003

## description/ordering information (continued)

The outputs, which are designed to source or sink up to 12 mA, include equivalent 22-Ω series resistors to reduce overshoot and undershoot.

Active bus-hold circuitry holds unused or undriven inputs at a valid logic state. Use of pullup or pulldown resistors with the bus-hold circuitry is not recommended.

When V<sub>CC</sub> is between 0 and 1.5 V, the devices are in the high-impedance state during power up or power down. However, to ensure the high-impedance state above 1.5 V,  $\overline{OE}$  should be tied to V<sub>CC</sub> through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

These devices are fully specified for hot-insertion applications using I<sub>off</sub> and power-up 3-state. The I<sub>off</sub> circuitry disables the outputs, preventing damaging current backflow through the devices when they are powered down. The power-up 3-state circuitry places the outputs in the high-impedance state during power up and power down, which prevents driver conflict.

### logic diagram (positive logic)

Pin numbers shown are for the DGG, DL, and WD packages.

#### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)<sup>†</sup>

Supply voltage range, V <sub>CC</sub> –0.5 V Input voltage range, V <sub>I</sub> (see Note 1)–0.5	
Voltage range applied to any output in the high-impedance	V to 7 V
or power-off state, $V_{\Omega}$ (see Note 1) -0.5	V to 7 V
Voltage range applied to any output in the high state, V <sub>O</sub> (see Note 1)0.5 V to V <sub>C</sub>	
Current into any output in the low state, I <sub>O</sub>	. 30 mA
Current into any output in the high state, I <sub>O</sub> (see Note 2)	. 30 mA
Input clamp current, I <sub>IK</sub> (V <sub>I</sub> < 0)	
Output clamp current, $I_{OK}$ ( $V_O < 0$ )	–50 mA
Package thermal impedance, θ <sub>JA</sub> (see Note 3): DGG package	
DL package	
GQL/ZQL package	
Storage temperature range, T <sub>stg</sub> 65°C	

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

2. This current flows only when the output is in the high state and  $V_O > V_{CC}$ .

3. The package thermal impedance is calculated in accordance with JESD 51-7.

## SN54LVTH162244, SN74LVTH162244 3.3-V ABT 16-BIT BUFFERS/DRIVERS WITH 3-STATE OUTPUTS

SCBS258M - JUNE 1993 - REVISED SEPTEMBER 2003

### recommended operating conditions (see Note 4)

			SN54LVTH	162244	SN74LVTH	162244	
			MIN	MAX	MIN	MAX	UNIT
VCC	Supply voltage		2.7	3.6	2.7	3.6	V
VIH	High-level input voltage		2		2		V
VIL	Low-level input voltage		0.8		0.8	V	
VI	Input voltage		5.5		5.5	V	
ЮН	High-level output current			-12		-12	mA
IOL	Low-level output current			12		12	mA
$\Delta t/\Delta v$	Input transition rise or fall rate	Outputs enabled		10		10	ns/V
Δt/ΔV <sub>CC</sub>	Power-up ramp rate		200		200		μs/V
Т <sub>А</sub>	Operating free-air temperature		-55	125	-40	85	°C

NOTE 4: All unused control inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, literature number SCBA004.

#### electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

## SN54LVTH162244, SN74LVTH162244 3.3-V ABT 16-BIT BUFFERS/DRIVERS WITH 3-STATE OUTPUTS

SCBS258M - JUNE 1993 - REVISED SEPTEMBER 2003

#### PARAMETER MEASUREMENT INFORMATION

NOTES: A. Cl includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
  C. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z<sub>O</sub> = 50 Ω, t<sub>f</sub> ≤ 2.5 ns. t<sub>f</sub> ≤ 2.5 ns.
- D. The outputs are measured one at a time with one transition per measurement.

Figure 1. Load Circuit and Voltage Waveforms

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details. TBD: The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
