ZRT100

9.8V LOW POWER PRECISION REFERENCE SOURCE

ISSUE 1 - OCTOBER 1995

DEVICE DESCRIPTION

The ZRT100 is a monolithic integrated circuit providing a precise stable reference voltage of 9.8V at 500 μ A.

The circuit features a knee current of 150 μ A and operation over a wide range of temperatures and currents.

The ZRT100 is available in a 3-pin metal can package for through hole applications as well as SOT223 and SO8 packages for surface mount applications. Each package option offers a trim facility whereby the output voltage can be adjusted as shown in Fig.1. This facility is used when compensating for system errors or setting the reference output to a particular value. When the trim facility is not used, the pin should be left open circuit.

FEATURES

- Trimmable output
- Excellent temperature stability
- Low output noise figure
- Available in two temperature ranges
- 1 and 2% initial voltage tolerance versions available
- No external stabilising capacitor required in most cases
- Low slope resistance
- TO18 package
- SOT223 and SO8 small outline packages

SCHEMATIC DIAGRAM

Figure 1:

This circuit will allow the reference to be trimmed over a wide range. The device is specified over a $\pm 5\%$ trim range.

TYPICAL CHARACTERISTICS

NOTES

(a) Output change with temperature (V_R)

The absolute maximum difference between the maximum output voltage and the minimum output voltage over the specified temperature range

$$\Delta V_R = V_{max} - V_{min}$$

(b) Output temperature coefficient (T_cV_R)

The ratio of the output change with temperature to the specified temperature range expressed in ppm/°C

$$T_c V_R = \frac{\Delta V_R \times 10^6}{V_R \times \Delta T} \text{ ppm/}^\circ\text{C}$$

ΔT = Full temperature range

(c) Operating current (I_R)

Maximum operating current must be derated as indicated in maximum ratings.

(d) Slope resistance (R_S)

The slope resistance is defined as :

$$R_S = \frac{\text{change in } V_R}{\text{specified current range}}$$

$$\Delta I = 5 - 0.5 = 4.5 \text{ mA (typically)}$$

(e) Line regulation

The ratio of change in output voltage to the change in input voltage producing it.

$$\frac{R_S \times 100}{V_R \times R_{source}} \%/\text{V}$$
