DESCRIPTION

The LXMG1617-12-4x is a Single Output 4W Direct Drive™ CCFL (Cold Cathode Fluorescent Lamp) Inverter Module specifically designed for driving LCD backlight lamps. It is ideal for driving typical 8.4" to 12.1" TFT panels.

LXMG1617 modules provide the designer with a vastly superior display brightness range. This brightness range is achievable with virtually any LCD display.

The maximum output current is externally programmable over a range of 5 to 6.5mA in 0.5mA steps to allow the inverter to properly match to a wide array of LCD panel lamp current specifications. The modules include a dimming input that permits brightness control from a dc voltage source, a PWM signal or an external potentiometer.

RangeMAX™ Digital Dimming Technique provides flicker-free brightness control in any wide range typically (50:1+) dimming application.

The resultant "burst drive" that energizes the lamp was designed specifically to ensure that no premature lamp degradation occurs, while allowing significant power savings at lower dim levels.

The modules convert DC voltage from the system battery or AC adapter directly to high frequency, high-voltage waves required to ignite and operate CCFL lamps. A 5V input inverter is also available (LXMG1617-05-4x).

The modules design is based on Microsemi's new LX1689 backlight controller, which provides a number of cost and performance advantages due to the controller's high level of integration.

Other benefits of this new topology are stable fixed-frequency operation, secondary-side strike-voltage regulation and both open/shorted lamp protection with fault timeout.

Protected By U.S. Patents: 5,923,129; 5,930,121; 6,198,234; Patents Pending

KEY FEATURES

- Externally Programmable Maximum Output Current
- Easy to Use Brightness Control
- RangeMAX Wide Range Dimming
- Output Short-Circuit Protection and Automatic Strike-Voltage Regulation and Timeout
- Fixed Frequency Operation
- Rated From -20 to 70°C
- UL60950 E175910
- RoHS Compliant

APPLICATIONS

- Notebook And Sub-Notebook
- Portable Instrumentation
- Desktop Displays
- Industrial Display Controls

BENEFITS

- Smooth, Flicker Free 2%-100% Full-Range Brightness Control
- Programmable output current allows inverter to mate with a wide variety of LCD panel's specifications
- Output Open Circuit Voltage Regulation Minimizes Corona Discharge For High Reliability

ABSOLUTE MAXIMUM RATINGS (NOTE 1)

Input Signal Voltage (V_{IN1})..-0.3V to 15V
Input Power 5.5W
Output Voltage, no load .... Internally Limited to $1600V_{RMS}$
Output Current ....$7.5mA_{RMS}$ (Internally Limited)
Output Power 4.0W
Input Signal Voltage ($\overline{SLEEP}$ Input)... -0.3V to V_{IN1}
Input Signal Voltage (BRITE) ....-0.3V to 5.5V
Ambient Operating Temperature, zero airflow..-20°C to 70°C
Storage Temperature Range..-40°C to 85°C

Note 1: Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of specified terminal.

RECOMMENDED OPERATING CONDITIONS (R.C.)

This module has been designed to operate over a wide range of input and output conditions. However, best efficiency and performance will be obtained if the module is operated under the condition listed in the 'R.C.' column. Min. and Max. columns indicate values beyond which the inverter, although operational, will not function optimally.

Parameter	Symbol	Recommended Operating Conditions			Units
		Min	R.C.	Max	
Input Supply Voltage Range (Fully Regulated Lamp Current)	V_{IN1}	10.8	12	13.2	V
Input Supply Voltage Range (Functional)		10.2	12	13.8	
Output Power	P_O		3.5	4.0	W
Linear BRITE Control Input Voltage Range	V_{BRT_ADJ}	0.5	2.0	2.0	V
Lamp Operating Voltage	V_{LAMP}	465	550	635*	V_{RMS}
Lamp Current (Full Brightness)	I_{OLAMP}	5		6.5	mA_{RMS}
Operating Ambient Temperature Range	T_A	-20		70	°C

* Total output power must not exceed 4W. Higher voltage lamps may require maximum output current to be set lower than $6.5mA_{RMS}$

ELECTRICAL CHARACTERISTICS

Unless otherwise specified, the following specifications apply over the recommended operating condition and ambient temperature of 25°C except where otherwise noted.

Parameter	Symbol	Test Conditions	LXMG1617-12-4x			Units
			Min	Typ	Max	
OUTPUT PIN CHARACTERISTICS						
Full Bright Lamp Current	$I_{L(MAX)}$	$V_{BRT\_ADJ} \geq 2.0V_{DC}$, $\overline{SLEEP} \geq 2.0V$, $V_{IN1} = 12V_{DC}$ I_{SET1} = Ground, I_{SET2} = Ground	4.5	5	5.5	mA_{RMS}
Full Bright Lamp Current	$I_{L(MAX)}$	$V_{BRT\_ADJ} \geq 2.0V_{DC}$, $\overline{SLEEP} \geq 2.0V$, $V_{IN1} = 12V_{DC}$ I_{SET1} = Ground, I_{SET2} = Open	5.0	5.5	6.0	mA_{RMS}

ELECTRICAL CHARACTERISTICS (CONTINUED)

Unless otherwise specified, the following specifications apply over the recommended operating condition and ambient temperature of 25°C except where otherwise noted.

Parameter	Symbol	Test Conditions	LXMG1617-12-4x			Units
			Min	Typ	Max	
BRITE INPUT						
Input Current	I_{BRT}	V_{BRT_ADJ} = 0V_{DC}		-300		µA$_{DC}$
		V_{BRT_ADJ} = 3V_{DC}		50		µA$_{DC}$
Minimum Input for Max. Lamp Current	V_{BRT_ADJ}	$I_{O(LAMP)}$ = Maximum Lamp Current		2.0	2.05	V_{DC}
Maximum Input for Min. Lamp Current	V_{BRT_ADJ}	$I_{O(LAMP)}$ = Minimum Lamp Current	0.4	0.5		V_{DC}
SLEEP INPUT						
RUN Mode	$V_{\overline{SLEEP}}$		2.0		5	V_{DC}
SLEEP Mode	$V_{\overline{SLEEP}}$		-0.3		0.8	V_{DC}
SET$_{1,2}$ INPUT						
SET$_{1,2}$ Low Threshold	V_L				0.4	V
Input Current	I_{SET}	V_{SET} ≤ 0.4V		-300		µA
POWER CHARACTERISTICS						
Sleep Current	$I_{IN(MIN)}$	V_{IN1} = 12V_{DC}, $\overline{SLEEP}$ ≤ 0.8V	0.0	8	20	µA$_{DC}$
Run Current	I_{RUN}	V_{IN1} = 12V_{DC}, $\overline{SLEEP}$ ≥ 2.0V, I_{SET1} = Open I_{SET2} = Ground, V_{LAMP} = 550V_{RMS}		330		mA$_{DC}$
Efficiency	η	V_{IN1} = 12V_{DC}, $\overline{SLEEP}$ ≥ 2.0V, I_{SET1} = Open I_{SET2} = Ground, V_{LAMP} = 550V_{RMS}		85		%

FUNCTIONAL PIN DESCRIPTION

| CONN	PIN	DESCRIPTION
CN1 (Molex 53261-0871) Mates with 51021-0800 housing, 50079-8100 pins. Mates with LX9501G input cable assembly		
CN1-1	V_{IN1}	Main Input Power Supply (10.8V ≤ V_{IN1} ≤ 13.2V)
CN1-2		
CN1-3	GND	Power Supply Return
CN1-4		
CN1-5	$\overline{SLEEP}$	ON/OFF Control. (0V < $\overline{SLEEP}$ < 0.8 = OFF, $\overline{SLEEP}$ >= 2.0V = ON
CN1-6	BRITE	Brightness Control (0.5V to 2.0V_{DC}). 2.0V_{DC} gives maximum lamp current.
CN1-7	SET$_1$	SET$_1$ MSB Connecting this pin to ground decreases the output current (see Table 1)
CN1-8	SET$_2$	SET$_2$ LSB Connecting this pin to ground decreases the output current (see Table 1)
CN2 for LXMG1617-12-41 and -42 (JST SM02(8.0)B-BHS-1-TB (LF)(SN)	Yeon Ho 20015WR-05A00 or SM02B-BHSS-1-TB (LF)(SN)	Yeon Ho 35001WR-02A00)		
CN2-1	V_{HI}	High voltage connection to high side of lamp. Connect to lamp terminal with shortest lead length. **DO NOT** connect to Ground.
CN2-2	V_{LO}	Connection to low side of lamp. Connect to lamp terminal with longer lead length. **DO NOT** connect to Ground

TABLE 1

OUTPUT CURRENT SETTINGS

SET₁ (Pin 7)	SET₂ (Pin 8)	Nominal Output Current
Open*	Open*	6.5mA
Open*	Ground	6.0mA
Ground	Open*	5.5mA
Ground	Ground	5.0mA

* If driven by a logic signal it should be open collector or open drain only, not a voltage source.

- The brightness control may be a voltage output DAC or other voltage source, a digital pot or 20K manual pot. The inverter contains an internal 10K pull-up to 3V to bias the pot add a 1.8K resistor to set the lower threshold voltage. A 3.3V Logic Level PWM signal from a micro-controller may also be used as shown in Figure 1A.

- If you need to turn the inverter ON/OFF remotely, connect to TTL logic signal to the $\overline{\text{SLEEP}}$ input.

- Connect V_{HI} to high voltage wire from the lamp. Connect V_{LO} to the low voltage wire (wire with thinner insulation). Never connect V_{LO} to circuit ground as this will defeat lamp current regulation. If both lamp wires have heavy high voltage insulation, connect the longest wire to V_{LO}. This wire is typically white.

- Use the SET_1 and SET_2 (see Figure 2) inputs to select the desired maximum output current. Using these two pins in combination allows the inverter to match a wide variety of panels from different manufactures. Generally the best lamp lifetime correlates with driving the CCFL at the manufactures nominal current setting. However the SET_1 and SET_2 inputs allow the user the flexibility to adjust the current to the maximum allowable output current to increase panel brightness at the expense of some reduced lamp life.

- Although the SET pins are designed such that just leaving them open or grounding them is all that is needed to set the output current, they can also be actively set. Using a open collector or open drain logic signal will allow you to reduce the lamp current for situations where greater dim range is required, as an example in nighttime situations. In conjunction with a light sensor or other timer the panel could be set to higher brightness (maximum output current) for daytime illumination and lower brightness (minimum or typical output current) at nighttime. Since the dim ratio is a factor of both the burst duty cycle and the peak output current, using this technique the effective dim ratio can be increased greater than the burst duty cycle alone. Conversely the SET inputs could be used to overdrive the lamp temporarily to facilitate faster lamp warm up at initial lamp turn on. Of course any possible degradation on lamp life from such practices is the users responsibility since not all lamps are designed to be overdriven.

- The inverter has a built in fault timeout function. If the output is open (lamp disconnected or broken) or shorted the inverter will attempt to strike the lamp for several seconds. After about 2 seconds without success the inverter will shutdown. In order to restart the inverter it is necessary to toggle the sleep input or cycle the V_{IN1} input supply.
