DESCRIPTION/ORDERING INFORMATION

This dual buffer/driver is designed for 1.65-V to 5.5-V V_{CC} operation. The output of the SN74LVC2G07 is open drain and can be connected to other open-drain outputs to implement active low wired OR or active high wired AND functions. The maximum sink current is 32 mA.

This device is fully specified for partial power-down applications using I_{off}. The I_{off} circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
(3) The value of V_{CC} is provided in the recommended operating conditions table.
(4) The package thermal impedance is calculated in accordance with JESD 51-7.
