

**LC75421M****Electronic Volume Controller for Cars****Overview**

The LC75421M is an electronic volume controller that enables control of volume, balance, fader, bass/treble + super bass, input switching, and input and output level control functions using only a small number of external components.

Functions

- Volume: 0 dB to -79 dB in 1-dB steps, and $-\infty$ (81 positions)
Balance function with separate L/R control
- Fader: rear output or front output can be attenuated across 16 positions (in 2-dB steps from 0 dB to -20 dB, 5-dB steps from -20 dB to -25 dB, 10-dB steps from -25 dB to -45 dB, and -60 dB, $-\infty$)
- Bass/treble: A tone control circuit can be configured using an external RC, with 15-position control from 0 dB to ± 11.9 dB in 1.7-dB steps possible for both bass and treble
- Input gain: 0 dB to +18.75 dB (1.25-dB steps)
amplification is possible for the input signal.
- Output gain: Fader output can be selected among 0 dB, +6.5 dB, and +8.5 dB.
- Input switching: Five input signals can be selected for Left and for Right
- Super bass: Step control with 11 positions is possible, with peaking characteristics (type T)

Features

- On-chip buffer amplifier cuts down number of external components
- Low switching noise generated by on-chip switch due to use of silicon gate CMOS process
- On-chip reference voltage circuit for analog ground
- Controls performed with serial input (CCB)

Package Dimensions

unit: mm

3263-MFP36SDJ (375 mil)

Volume Block Equivalent Circuit Diagram

Treble/Bass/Super Bass Band Block Equivalent Circuit Diagram

Same for right channel
Units: (Resistance: Ω)

During boost, SW1 and SW3 are ON, during cut, SW2 and SW4 are ON,
when 0 dB, 0 dB SW and SW2 and SW3 are ON.

Fader Volume Block Equivalent Circuit Diagram

When $-\infty$ data is sent to the main volume, S1 and S2 become open, and S3 and S4 simultaneously become ON.

Tone Circuit Constant Calculation Examples

Super Bass Band Circuit

The equivalent circuit and the formula for calculating the external RC with a mean frequency of 68 Hz are shown below.

- Super bass band equivalent circuit block diagram

- Calculation example

Specification Mean frequency: $f_0 = 68 \text{ Hz}$

Gain during maximum boost: $G = 20 \text{ dB}$

Let us use $R_1 = 0$, $R_2 = 66.6 \text{ k}\Omega$, and $C_1 = C_2 = C$.

We obtain R_3 from $G = 20 \text{ dB}$.

$$G_{+20 \text{ dB}} = 20 \times \text{LOG}_{10} \left(1 + \frac{R_2}{2R_3} \right)$$

$$R_3 = \frac{R_2}{2(10^{G/20} - 1)} = \frac{66600}{2 \times (10 - 1)} \approx 3.7 \text{ K}\Omega$$

We obtain C from mean frequency $f_0 = 68 \text{ Hz}$.

$$f_0 = \frac{1}{2\pi\sqrt{R_3R_2C_1C_2}}$$

$$C = \frac{1}{2\pi f_0 \sqrt{R_3R_2}} = \frac{1}{2\pi \times 68 \sqrt{66600 \times 3700}} \approx 0.15 \text{ }\mu\text{F}$$

We obtain Q .

$$Q = \frac{R_3R_2}{2R_3} \frac{1}{\sqrt{R_3R_2}} \approx 2.1$$

Treble Band Circuit

The shelving characteristics can be obtained for the treble band.

The equivalent circuit and calculation formula during boost are indicated below.

• Calculation example 1

Specification Set frequency: $f = 10000 \text{ Hz}$

Gain during maximum boost: $G + 14 \text{ dB} = 14 \text{ dB}$

Let us use $R1 = 11.030 \text{ k}\Omega$ and $R2 = 45.054 \text{ k}\Omega$.

The above constants are inserted in the following formula.

$$G = 20 \times \text{LOG}_{10} \left(1 + \frac{R2}{\sqrt{R1^2 + (1 / \omega C)^2}} \right)$$

$$C = \frac{1}{2\pi f \sqrt{\left(\frac{R2}{10^{G/20} - 1}\right)^2 - R1^2}}$$

$$= \frac{1}{2\pi 10000 \sqrt{\left(\frac{45054}{5.01 - 1}\right)^2 - 11030^2}} \neq 6800(\text{pF})$$

Simulation Results

Setting	f = 10 kHz	f = 1 kHz
14 dB	13.95	7.42
12 dB	11.98	6.96
10 dB	10	6.34
8 dB	8	5.5
6 dB	6	4.43
4 dB	4	3.13
2 dB	2	1.64

• Calculation example 2

Specification Set frequency: $f = 10000 \text{ Hz}$

Gain during maximum boost: $G_{+11.9 \text{ dB}} = 11.9 \text{ dB}$

Let us use $R1 = 11.030 \text{ k}\Omega$ and $R2 = 45.054 \text{ k}\Omega$.

The above constants are inserted in the following formula.

$$G = 20 \times \text{LOG}_{10} \left(1 + \frac{R2}{\sqrt{R1^2 + (1 / \omega C)^2}} \right)$$

$$C = \frac{1}{2\pi f \sqrt{\left(\frac{R2}{10^{11.9/20} - 1}\right)^2 - R1^2}}$$

$$= \frac{1}{2\pi 10000 \sqrt{\left(\frac{45054}{3.94 - 1}\right)^2 - 11030^2}} \neq 1500(pF)$$

Simulation Results

Setting	f = 10 kHz	f = 1 kHz
11.9 dB	11.92	0.00
10.2 dB	10.64	0.00
8.5 dB	9.17	0.00
6.8 dB	7.52	0.00
5.1 dB	5.74	0.00
3.4 dB	3.88	0.00
1.7 dB	1.96	0.00

Bass Shelving Circuit

The equivalent circuit and calculation formula during boost are shown below.

- Bass band equivalent circuit diagram

- Calculation example 1

Specification Mean frequency: $f_0 = 40 \text{ Hz}$

Gain during maximum boost: $G_{+14 \text{ dB}} = 14 \text{ dB}$

Let us use $R_1 = 0 \text{ k}\Omega$, $R_2 = 45.054 \text{ k}\Omega$, $C_1 = 2.2 \text{ }\mu\text{F}$, and $C_1 \gg C_2$.

We obtain R_3 from $G = 14 \text{ dB}$.

$$G_{+14 \text{ dB}} = 20 \times \text{LOG}_{10} \left(\frac{R_2 + R_3}{R_3} \right)$$

$$R_3 = \frac{R_2}{10^{G/20} - 1} = \frac{45054}{5.01 - 1} \approx 11 \text{ K}\Omega$$

We obtain C_2 from mean frequency $f_0 = 40 \text{ Hz}$.

$$f_0 = \frac{1}{2\pi\sqrt{R_3 R_2 C_1 C_2}}$$

$$C_2 = \frac{1}{(2\pi f_0)^2 R_2 R_3 C_1} = \frac{1}{(2\pi \times 40)^2 \times 45054 \times 11000 \times (2.2 \times 10^{-6})} \approx 0.015 \text{ }\mu\text{F}$$

Simulation Results

Setting	f = 100 Hz	f = 1 kHz
14 dB	13.55	3.65
12 dB	11.73	3.51
10 dB	9.8	3.31
8 dB	7.89	3
6 dB	5.94	2.55
4 dB	3.97	1.92
2 dB	1.99	1.07

• Calculation example 2

Specification Mean frequency: $f_0 = 40 \text{ Hz}$

Gain during maximum boost: $G = 12 \text{ dB}$

Let us use $R_1 = 0 \text{ k}\Omega$, $R_2 = 45.054 \text{ k}\Omega$, $C_1 = 2.2 \text{ }\mu\text{F}$, and $C_1 \gg C_2$.

We obtain R_3 from $G = 12 \text{ dB}$.

$$G_{+12 \text{ dB}} = 20 \times \text{LOG}_{10} \left(\frac{R_2 + R_3}{R_3} \right)$$

$$R_3 = \frac{R_2}{10^{G/20} - 1} = \frac{45054}{3.98 - 1} \approx 15 \text{ K}\Omega$$

We obtain C_2 from mean frequency $f_0 = 40 \text{ Hz}$.

$$f_0 = \frac{1}{2\pi\sqrt{R_3 R_2 C_1 C_2}}$$

$$C_2 = \frac{1}{(2\pi f_0)^2 R_2 R_3 C_1} = \frac{1}{(2\pi \times 40)^2 \times 45054 \times 15000 \times (2.2 \times 10^{-6})} \approx 0.01 \text{ }\mu\text{F}$$

Simulation Results

Setting	f = 100 Hz	f = 1 kHz
14 dB	11.73	4.27
12 dB	10.29	4.07
10 dB	8.74	3.78
8 dB	7.11	3.38
6 dB	5.41	2.82
4 dB	3.65	2.09
2 dB	1.85	1.15

(4) Bass Peaking Circuit

The equivalent circuit and the formula for calculating the external RC with a mean frequency of 100 Hz are shown below.

- Bass band equivalent circuit diagram

- Calculation example

Specification Mean frequency: $f_0 = 100 \text{ Hz}$

Gain during maximum boost: $G = 11.9 \text{ dB}$

Let us use $R_1 = 0$, $R_2 = 45.084 \text{ k}\Omega$, and $C_1 = C_2 = C$.

We obtain R_3 from $G = 11.9 \text{ dB}$.

$$G_{+11.9 \text{ dB}} = 20 \times \text{LOG}_{10} \left(1 + \frac{R_2}{2R_3} \right)$$

$$R_3 = \frac{R_2}{2(10^{11.9 \text{ dB}/20} - 1)} = \frac{45084}{2 \times (3.936 - 1)} \approx 7.68 \text{ K}\Omega$$

We obtain C from mean frequency $f_0 = 100 \text{ Hz}$.

$$f_0 = \frac{1}{2\pi\sqrt{R_3R_2C_1C_2}}$$

$$C = \frac{1}{2\pi f_0 \sqrt{R_3R_2}} = \frac{1}{2\pi \times 100 \sqrt{45084 \times 7680}} \approx 0.082 \text{ }\mu\text{F}$$

We obtain Q .

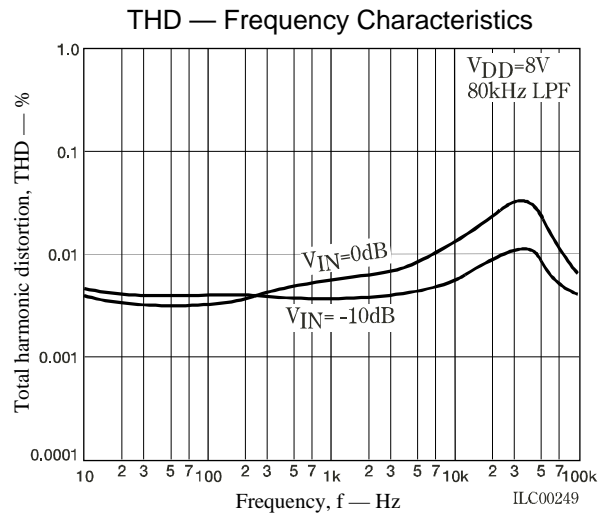

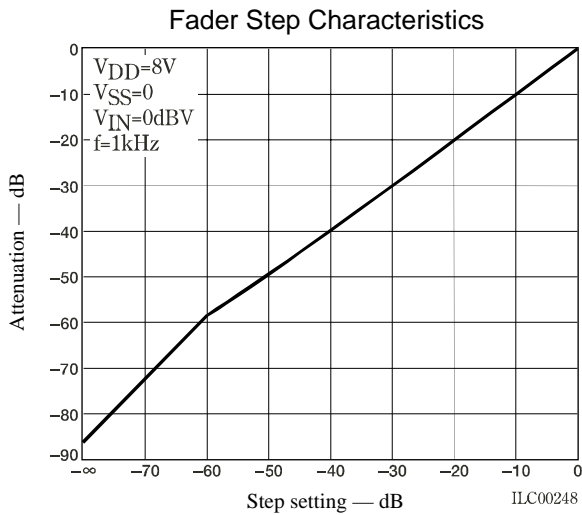

$$Q = \frac{R_3R_2}{2R_3} \cdot \frac{1}{\sqrt{R_3R_2}} \approx 1.66$$

Simulation Results

Setting	f = 100 Hz	f = 1 kHz
11.9 dB	11.88	0.00
10.2 dB	10.38	0.00
8.5 dB	8.79	0.00
6.8 dB	7.14	0.00
5.1 dB	5.42	0.00
3.4 dB	3.66	0.00
1.7 dB	1.85	0.00

Usage Cautions

- (1) Upon power application, the internal analog switch status is undefined. Use an external countermeasure such as muting until data is set.
- (2) When performing initial data setting after applying power, send the initial data once, and then send the initial setting data.
- (3) To ensure that the digital frequency signal sent to the CL, DI, and CE pins do not spill over to the analog signal block, either guard these signal lines with a ground pattern, or perform transmission using shielded wires.

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Electric Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
