MAXIM

High Precision +2.5 Volt Reference

MX580

General Description

The MX580 is a high performance three-terminal voltage reference which provides a stable +2.5V source for 8, 10, and 12-bit data converters and analog functions. A temperature compensated internal bandgap operates from +4.5V to +30V and consumes only 1.5mA.

The reference can be connected directly to a number of CMOS A-to-D and D-to-A converters and is especially convenient in +5V powered systems. An inital untrimmed accuracy of 0.4% and temperature stability of 10ppm/°C allow adjustment-free designs in many precision applications.

Available packages include TO-52 metal cans for commercial and military temperature grades, as well as 8 lead small outline for commercial grade devices.

Applications

CMOS Data Conversion
Digital Panel Meters
Portable Instrumentation
Remote Measurement Systems
Logic Powered Analog Systems

Features

- ♦ 2.500V ±0.4% Accuracy (MX580L/M)
- ♦ 10ppm/°C Temperature Stability (MX580M)
- ♦ No Adjustments
- ♦ 250μV Long Term Stability
- ♦ 1.5mA Quiescent Current
- ♦ +4.5V to +30V Operation

Ordering Information

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
