

FEATURES

- **Qualified for Automotive Applications**
- **Customer-Specific Configuration Control Can Be Supported Along With Major-Change Approval**
- **Wide Supply-Voltage Range . . . 3 V to 30 V**
- **Ultra-Low Power-Supply Current Drain . . . 60 μ A Typ**
- **Low Input Biasing Current . . . 3 nA**
- **Low Input Offset Current . . . ± 0.5 nA**
- **Low Input Offset Voltage . . . ± 2 mV**
- **Common-Mode Input Voltage Includes Ground**
- **Output Voltage Compatible With MOS and CMOS Logic**
- **High Output Sink-Current Capability (30 mA at $V_O = 2$ V)**
- **Power-Supply Input Reverse Voltage Protected**
- **Single Power-Supply Operation**
- **Pin-for-Pin Compatible With LM239, LM339, LM2901**

D PACKAGE

DESCRIPTION/ORDERING INFORMATION

The LP2901 is a low-power quadruple differential comparator. The device consists of four independent voltage comparators designed specifically to operate from a single power supply and, typically, to draw 60- μ A drain current over a wide range of voltages. Operation from split power supplies also is possible, and the ultra-low power-supply drain current is independent of the power-supply voltage.

Applications include limit comparators, simple analog-to-digital converters, pulse generators, square-wave generators, time-delay generators, voltage-controlled oscillators, multivibrators, and high-voltage logic gates. The LP2901 is designed specifically to interface with the CMOS logic family. The ultra-low power-supply current makes these products desirable in battery-powered applications.

The LP2901 is characterized for operation from -40°C to 85°C .

ORDERING INFORMATION

T_A	$V_{IO\text{MAX}}$ AT 25°C	PACKAGE ⁽¹⁾		ORDERABLE PART NUMBER	TOP-SIDE MARKING
-40°C to 85°C	± 5 mV	SOIC – D	Reel of 2500	LP2901IDRQ1	LP2901IQ1

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

LP2901-Q1 LOW-POWER QUAD DIFFERENTIAL COMPARATOR

SLU018B LP2901-Q1 (2015) 供应商

SCHEMATIC DIAGRAM (EACH COMPARATOR)

Absolute Maximum Ratings⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{CC}	Supply voltage ⁽²⁾		36	V
V_{ID}	Differential input voltage range ⁽³⁾		±36	V
V_I	Input voltage range (either input)	-0.3	36	V
I_I	Input current ⁽⁴⁾	$V_I \leq -0.3$ V		-50 mA
	Duration of output short-circuit to ground ⁽⁵⁾	Unlimited		
	Continuous total power dissipation ⁽⁶⁾	See Dissipation Rating Table		
θ_{JA}	Package thermal impedance ⁽⁷⁾⁽⁸⁾		133.5	°C/W
T_A	Operating free-air temperature range	-40	85	°C
T_J	Operating virtual junction temperature		150	°C
T_{lead}	Lead temperature range	1,6 mm (1/16 in) from case for 60 s		300 °C
T_{stg}	Storage temperature range	-65	150	°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential voltages, are with respect to the network ground.
- (3) Differential voltages are at IN+ with respect to IN-.
- (4) This input current exists only when the voltage at any of the inputs is driven negative. The current flows through the collector-base junction of the input clamping device. In addition to the clamping device action, there is lateral n-p-n parasitic transistor action. This action is not destructive, and normal output states are reestablished when the input voltage returns to a value more positive than -0.3 V at $T_A = 25^\circ\text{C}$.
- (5) Short circuits between outputs to V_{CC} can cause excessive heating and eventual destruction.
- (6) If the output transistors are allowed to saturate, the low-bias dissipation and the on-off characteristics of the outputs keep the dissipation very small (usually less than 100 mW).
- (7) Maximum power dissipation is a function of $T_J(\text{max})$, θ_{JA} , and T_A . The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(\text{max}) - T_A)/\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can impact reliability.
- (8) The package thermal impedance is calculated in accordance with JESD 51 (low-K board).

Dissipation Ratings

PACKAGE	$T_A \leq 25^\circ\text{C}$ POWER RATING	DERATING FACTOR ABOVE $T_A = 25^\circ\text{C}$	$T_A = 70^\circ\text{C}$ POWER RATING	$T_A = 85^\circ\text{C}$ POWER RATING
D	936 mW	7.49 mW/°C	599 mW	486 mW

Recommended Operating Conditions

			MIN	MAX	UNIT
V_{CC}	Supply voltage		3	30	V
V_{IC}	Common-mode input voltage	$V_{CC} = 5\text{ V}$	0	3	V
		$V_{CC} = 30\text{ V}$	0	28	
V_I	Input voltage	$V_{CC} = 5\text{ V}$	0	3	V
		$V_{CC} = 30\text{ V}$	0	28	
T_A	Operating free-air temperature		-40	85	°C

Electrical Characteristics

 $V_{CC} = 5\text{ V}$, $T_A = 25^\circ\text{C}$ (unless otherwise noted)

PARAMETER	TEST CONDITIONS		$T_A^{(1)}$	MIN	TYP	MAX	UNIT
V_{IO}	Input offset voltage	$V_{CC} = 5\text{ V to } 30\text{ V}$, $V_O = 2\text{ V}^{(2)}$, $R_S = 0$	25°C		±2	±5	mV
			Full range			±9	
I_{IO}	Input offset current		25°C		±0.5	±5	nA
			Full range		±1	±15	
I_{IB}	Input bias current ⁽³⁾		25°C		-2.5	-25	nA
			Full range		-4	-40	
V_{ICR}	Common-mode input voltage range	Single supply	25°C	0 to $V_{CC} - 1.5$		V	
			Full range	0 to $V_{CC} - 2$			
A_{VD}	Large-signal differential voltage amplification	$V_{CC} = 15\text{ V}$, $R_L = 15\text{ k}\Omega$		500		V/mV	
Output sink current	$V_{L-} = 1\text{ V}$, $V_{L+} = 0$	$V_O = 2\text{ V}^{(4)}$	25°C	20	30	mA	
			Full range	15			
Output leakage current	$V_{L+} = 1\text{ V}$, $V_{L-} = 0$	$V_O = 0.4\text{ V}$	25°C	0.2	0.7	nA	
		$V_O = 5\text{ V}$	25°C	0.1			
I_{CC}	Supply current	$R_L = \infty$, All comparators	Full range			1	μA
						36	V
V_{ID}	Differential input voltage	$V_I \leq 0$ (or V_{CC-} on split supplies)				36	V
I_{CC}	Supply current	$R_L = \infty$, All comparators		60	100	μA	

(1) Full range is -40°C to 125°C .

(2) V_{IO} is measured over the full common-mode input voltage range.

(3) Because of the p-n-p input stage, the direction of the current is out of the device. This current essentially is constant (i.e., independent of the output state). No loading change exists on the reference or input lines as long as the common-mode input voltage range is not exceeded.

(4) The output sink current is a function of the output voltage. These devices have a bimodal output section that allows them to sink (via a Darlington connection) large currents at output voltages greater than 1.5 V and smaller currents at output voltages less than 1.5 V.

Switching Characteristics

 $V_{CC} = 5\text{ V}$, $T_A = 25^\circ\text{C}$, R_L connected to 5 V through 5.1 k Ω

PARAMETER	TEST CONDITIONS	TYP	UNIT
Large-signal response time	TTL logic swing, $V_{ref} = 1.4\text{ V}$	1.3	μs
Response time		8	

APPLICATION INFORMATION

Figure 1 shows the basic configuration for using the LP2901 comparator. Figure 2 shows the diagram for using it as a CMOS driver.

Figure 1. Basic Comparator

Figure 2. CMOS Driver

All pins of any unused comparators should be grounded. The bias network of the LP2901 establishes a drain current that is independent of the magnitude of the power-supply voltage over the range of 2 V to 30 V. It usually is necessary to use a bypass capacitor across the power-supply line.

The differential input voltage may be larger than V_{CC} without damaging the device. Protection should be provided to prevent the input voltages from going negative by more than -0.3 V. The output section has two distinct modes of operation, the Darlington mode and the ground-emitter mode. This unique drive circuit permits the device to sink 30 mA at $V_O = 2$ V in the Darlington mode and 700 μ A at $V_O = 0.4$ V in the ground-emitter mode.

Figure 3 is a simplified schematic diagram of the output section. The output section is configured in a Darlington connection (ignoring Q3). If the output voltage is held high enough (above 1 V), Q1 is not saturated and the output current is limited only by the product of the h_{FE} of Q1, the h_{FE} of Q2, and I_1 and the 60- Ω saturation resistance of Q2. The devices are capable of driving LEDs, relays, etc. in this mode while maintaining an ultra-low power-supply current of 60 μ A typical.

Figure 3. Output-Section Schematic Diagram

Without transistor Q3, if the output voltage were allowed to drop below 0.8 V, transistor Q1 would saturate, and the output current would drop to zero. The circuit would be unable to pull low current loads down to ground or the negative supply, if used. Transistor Q3 has been included to bypass transistor Q1 under these conditions and apply the current I_1 directly to the base of Q2. The output sink current now is approximately I_1 times the h_{FE} of Q2 (700 μ A at $V_O = 0.4$ V). The output of the devices exhibits a bimodal characteristic, with a smooth transition between modes.

In both cases, the output is an uncommitted collector. Several outputs can be tied together to provide a dot logic function. An output pullup resistor can be connected to any available power-supply voltage within the permitted power-supply range, and there is no restriction on this voltage, based on the magnitude of the voltage that is supplied to V_{CC} of the package.

PACKAGING INFORMATION

Orderable Device	Status ⁽¹⁾	Package Type	Package Drawing	Pins	Package Qty	Eco Plan ⁽²⁾	Lead/Ball Finish	MSL Peak Temp ⁽³⁾
LP2901IDRQ1	ACTIVE	SOIC	D	14	2500	Pb-Free (RoHS)	CU NIPDAU	Level-2-250C-1 YEAR/ Level-1-235C-UNLIM

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 (0,15) per end.
 - D. Body width does not include interlead flash. Interlead flash shall not exceed .017 (0,43) per side.
 - E. Reference JEDEC MS-012 variation AB.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.
