Rated voltage :

The rated voltage shall be the voltage of D. C. or A. C. (commercial frequency, effective value) corresponding to the rated power (dissipation), and be obtained from the following formula. When the obtained rated voltage exceeds the maximum working voltage given in the following, however, the maximum working voltage of the following shall be the rated voltage.

$$E = \sqrt{P \cdot R} \text{ (V)}$$

Where E : Rated voltage (V)
 P : Rated power (dissipation) (W)
 R : Nominal total resistance (Ω)
 Maximum working voltage : 50 V A. C. , 10 V D. C.

Resistance to soldering heat

There shall be no evidence of poor contact between resistance element and terminals, or any physical damages as a result of soldering.

- Dip soldering :
 Condition of soldering :
 Soldering shall be certified with following condition.
 Substrate to be soldered :
 Copper clad laminated phenol board in one surface of 1.6 mm thickness.
 Solder flux :
 Flux of 0.82 specific weight in bubbling type solder fluxcoating apparatus shall be used and bubbling surface height shall be defined substantially as half thickness of substrate.
 Preheating :
 Flux shall not flow up on substrate surface.
 Surface temperature of substrate shall be settled within 100°C in 2 minutes.
 Dip soldering :
 To be performed in 3 seconds within 260°C.
 Please use the above process only 1 or 2 times.
- Manual soldering
 To be performed in 3 seconds within 300°C.
