ULTRA-SMALL, LOW-INPUT-VOLTAGE, LOW r_{ON} LOAD SWITCH WITH HYSTERESIS CONTROL INPUT

Check for Samples: TPS22934

FEATURES

- **Integrated Single-Channel Load Switch**
- **Ultra Small CSP-4 package**
  0.9 mm x 0.9 mm, 0.5-mm Pitch, 0.5-mm Thick
- **Input Voltage: 1.5 V to 3.6 V**
- **Ultra-Low ON Resistance**
  - **$r_{DS(ON)}$ = 63 mΩ at V_{IN} = 3.6 V**
  - **$r_{DS(ON)}$ = 69 mΩ at V_{IN} = 2.5 V**
  - **$r_{DS(ON)}$ = 78 mΩ at V_{IN} = 1.8 V**
  - **$r_{DS(ON)}$ = 87 mΩ at V_{IN} = 1.5 V**
- **1-A Maximum Continuous Switch Current**
- **Integrated Hysteresis Enable Input (ON Pin)**
  Allows Easy Power Rail Sequencing
- **Controlled Slew Rate Option: 26 µs at 3.6 V**
- **Quick Output Discharge Transistor**
- **ESD Performance Tested Per JESD 22**
  - **3000-V Human-Body Model**
    (A114-B, Class II)
  - **1000-V Charged-Device Model (C101)**

APPLICATIONS

- **Battery Powered Equipment**
- **Portable Industrial Equipment**
- **Portable Medical Equipment**
- **Portable Media Players**
- **Point Of Sales Terminal**
- **GPS Devices**
- **Digital Cameras**
- **Portable Instrumentation**
- **Smartphones**

DESCRIPTION

The TPS22934 is a small, ultra low ON-resistance (r_{ON}) load switch with controlled turn on. The devices contain a P-channel MOSFETs that can operate over an input voltage range of 1.5 V to 3.6 V.

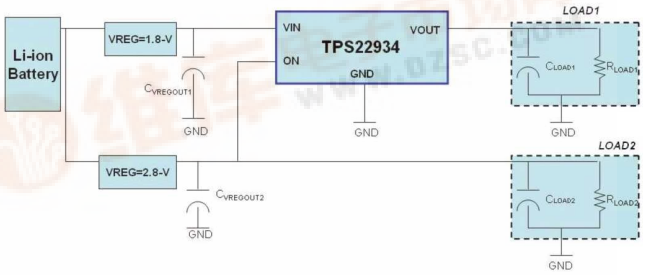
The switch is controlled by an on/off input (ON), which has built in hysteresis ($V_{TH+(typ)}$ = 2.35 V) allowing an easy use of TPS22934 in power-rail sequencing applications.

In TPS22934 a 35-Ω on-chip load resistor is added for output quick discharge when switch is turned off.

In TPS22934, the rise time of the device is internally controlled in order to avoid inrush current. TPS22934 feature a typical rise time of 26 µs with a 3.6-V input.

The TPS22934 is available in an ultra-small space-saving 4-pin CSP package and is characterized for operation over the free-air temperature range of –40ºC to 85ºC.

TYPICAL APPLICATION
1.8-V Power Rail Sequencing



FEATURE LIST

	r_{ON} (TYP) AT 3.6 V	SLEW RATE (TYP) AT 3.6 V	QUICK OUTPUT DISCHARGE	MAXIMUM OUTPUT CURRENT	ENABLE
TPS22934	63 mΩ	26 µs	Yes	1 A	Hysteresis Input $V_{TH+(typ)}$ = 2.35 V

ORDERING INFORMATION(1)

T_A	PACKAGE(2)		ORDERABLE PART NUMBER	TOP-SIDE MARKING(3)
–40°C to 85°C	DSBGA – YZP (0.5-mm pitch)	Tape and reel	TPS22934YZVR	_ _ _ _ 6 2
		Tape and reel	TPS22934YZVT	

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.
(2) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.
(3) The actual top-side marking has four preceding characters to denote year, month, sequence code, and the wafer fab/assembly site. Pin 1 identifier indicates solder-bump composition (1 = SnPb, ● = Pb-free).

```
+----------+        Y            = YEAR
|          |        M            = MONTH
| YMSN     |        S            = LOT SEQUENCE
|   62     |        4TH CHAR     = WAFER FAB/ASSEMBLY SITE CODE
| ●        |        LINE 2       = DEVICE NAME CODE
+----------+        ●            = PIN ONE (FILLED CIRCLE)
```

ABSOLUTE MAXIMUM RATINGS(1)

			MIN	MAX	UNIT
V_{IN}	Input voltage range		–0.3	4	V
V_{OUT}	Output voltage range			V_{IN} + 0.3	V
V_{ON}	Control input voltage range		–0.3	4	V
I_{MAX}	Maximum continuous switch current, T_A = -40°C to 85°C			1	A
I_{PLS}	Maximum pulsed switch current, 100-µs pulse, 2% duty cycle, T_A = -40°C to 85°C			1.4	A
T_A	Operating free-air temperature range		–40	85	°C
T_{stg}	Storage temperature range		–65	150	°C
ESD	Electrostatic discharge protection	Human-Body Model (HBM)		3000	V
		Charged-Device Model (CDM)		1000	

(1) Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

DISSIPATION RATINGS

BOARD	PACKAGE	$R_{\theta JC}$	$R_{\theta JA}$	DERATING FACTOR ABOVE T_A = 25°C	T_A < 25°C	T_A = 70°C	T_A = 85°C
High-K(1)	YZV	28.18°C/W	120.62°C/W	-8.2904 mW/°C	829.04 mW	455.97 mW	331.61 mW

(1) The JEDEC high-K (2s2p) board used to derive this data was a 3- × 3-inch, multilayer board with 1-ounce internal power and ground planes and 2-ounce copper traces on top and bottom of the board.

RECOMMENDED OPERATING CONDITIONS

		MIN	MAX	UNIT

APPLICATION INFORMATION

ON/OFF Control

The ON pin controls the state of the switch. The TPS22934 has built-in hysteresis on its control inputs. The load switch is active when the ON voltage is greater than the positive going voltage threshold (V_{TH+}). If the ON voltage is lower than the negative going voltage threshold (V_{TH-}), then the pass FET is deactivated and the active pulldown from VOUT to GND is activated.

This is ideal for power rail sequencing applications as shown in Figure 2 where the 2.8-V supply needs to be valid before the 1.8-V supply turn on:

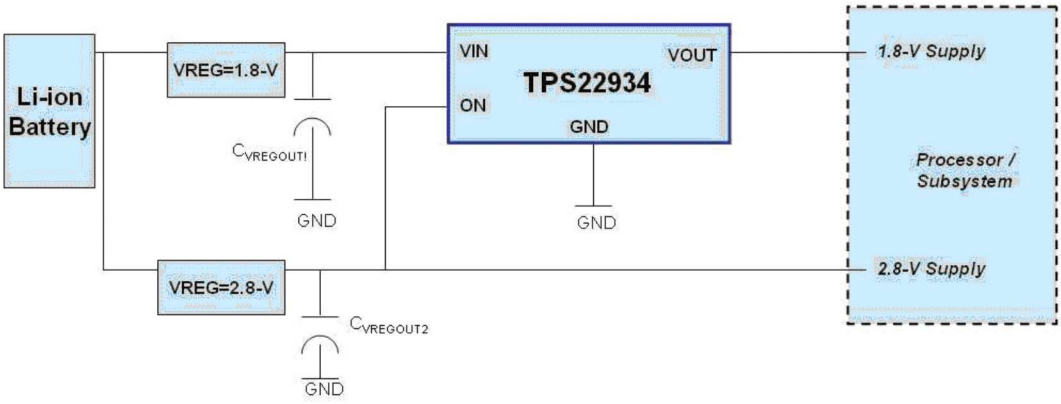

Figure 2. 1.8-V / 2.8-V Power Rail Sequencing

Input Capacitor

To limit the voltage drop on the input supply caused by transient in-rush currents when the switch turns on into a discharged load capacitor or short-circuit, a capacitor needs to be placed between VIN and GND. A 1-µF ceramic capacitor, C_{IN}, placed close to the pins is usually sufficient. Higher values of C_{IN} can be used to further reduce the voltage drop.

Output Capacitor

Due to the integral body diode in the PMOS switch, a C_{IN} greater than C_L is highly recommended. A C_L greater than C_{IN} can cause V_{OUT} to exceed V_{IN} when the system supply is removed. This could result in current flow through the body diode from V_{OUT} to V_{IN}.

Board Layout

For best performance, all traces should be as short as possible. To be most effective, the input and output capacitors should be placed close to the device to minimize the effects that parasitic trace inductances may have on normal and short-circuit operation. Using wide traces for V_{IN}, V_{OUT}, and GND helps minimize the parasitic electrical effects along with minimizing the case to ambient thermal impedance.

Undervoltage Lockout

The undervoltage lockout turns off the switch if the input voltage drops below the under-voltage lockout threshold. With the ON pin active, the input voltage rising above the undervoltage lockout threshold causes a controlled turn-on of the switch, which limits current overshoots.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
