

Dual 2W Power Amplifier, I²C interface Stereo Input with Volume Control

FEATURES

- Operation range: 2.4V~5.5V
- Volume control range
Gain: 0 to 21dB, 3dB/step
Attenuation: 0 to -77.5dB, 1.25dB/step
- Output mode : Speaker(BTL)/Headphone(SE)
- BTL Output power
R_L=4Ω, 2W at 5V, 0.8W at 3.3V, 360mW at 2.4V
R_L=8Ω, 1.3W at 5V, 0.53W at 3.3V, 250mW at 2.4V
- SE Output power
R_L=32Ω, 93mW at 5V, 35mW at 3.3V, 15mW at 2.4V
- Control interface : I²C
- Excellent Power Supply Rejection Ratio(PSRR)
- Flexibility power management
- Component less
- Reduce pop noise circuit
- Housed in TSSOP16 package, enhanced thermal PAD

APPLICATIONS

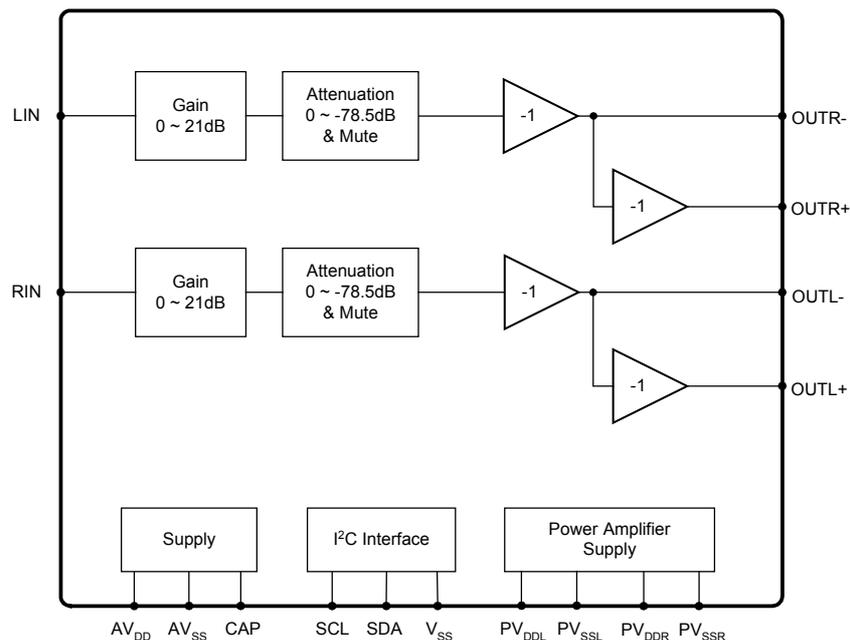

Multimedia system, Portable Digital Audio.

DESCRIPTION

The MS6864 is low distortion stereo power amplifier (SE/BTL) integrated volume control. It can drive 2W of continuous average power into a dual 4Ω bridged-tied (BTL) speaker or 2 * 90mW into stereo 32Ω single ended (SE) headphone. The volume control offers wide range of gain and attenuation for stereo input. All of the functions are easy setting that can be set by I2C interface.

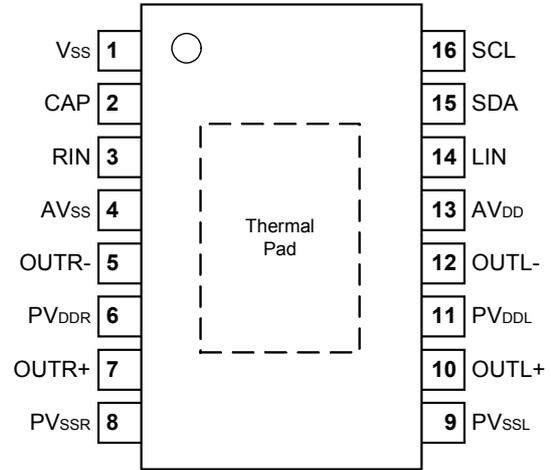

The MS6864 has good features for portable equipment, including wide voltage operation 2.4V~5.5V, low power consumption, power management, component less and small package TSSOP16, make the MS6864 ideally suitable for use in the portable digital audio equipments.

BLOCK DIAGRAM

PIN CONFIGURATION

Symbol	Pin	Description
V _{SS}	1	Connected to ground
CAP	2	Capacitor connected
RIN	3	Right channel input
AV _{SS}	4	Negative supply voltage
OUTR-	5	SE right channel output or negative output of BTL right channel
PV _{DDR}	6	Positive supply voltage for right channel of power amplifier
OUTR+	7	Positive output of BTL right channel
PV _{SSR}	8	Negative supply voltage for right channel of power amplifier
PV _{SSL}	9	Negative supply voltage for left channel of power amplifier
OUTL+	10	Positive output of BTL left channel
PV _{DDL}	11	Positive supply voltage for left channel of power amplifier
OUTL-	12	SE left channel output or negative output of BTL left channel
AV _{DD}	13	Positive supply voltage
LIN	14	Left channel input
SDA	15	I ² C data input
SCL	16	I ² C clock input

MS6864, TSSOP16

Note: 1. SE: Single Ended. BTL: Bridged-Tied Load

I²C CONTROL INTERFACE

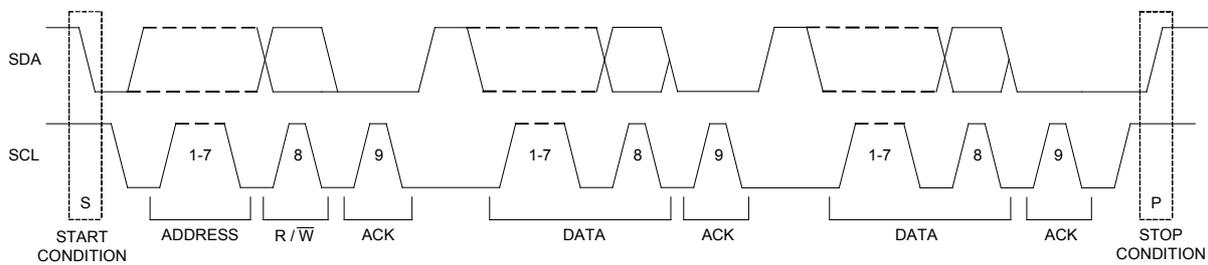

Data are transmitted to and from the MCU and MS6864 via the SDA and SCL. The SDA and SCL make up the BUS interface. It should be noted that pull-up resistors must be connected to the positive supply voltage.

I²C interface protocol

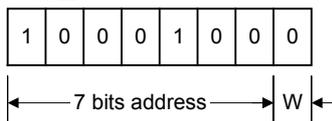

The format consists of the following:

- A START condition
- A chip address byte including the chip address. (7bits)
- The 8th bit of the byte must be “0”.(write=0, read=1)
- The chip must always acknowledge the end of each transmitted byte.
- A data sequence (N-bytes + Acknowledge)
- A STOP condition

I²C chip address

88H

			1	0	1			15 dB
			1	1	0			18 dB
			1	1	1			21 dB

Initial state: Both L-ch and R-ch are 0dB gain.

Power Down Mode								
MSB							LSB	Function
1	1	0	1	RPD	LPD	PDPR	CAP PD	Power mode selection and power management
				0				R-ch PA output is active mode
				1				R-ch PA output is power down mode
					0			L-ch PA output is active mode
					1			L-ch PA output is power down mode
						0		Disable preparation for power off
						1		Enable preparation for power off
							0	Set the voltage of CAP to middle of supply voltage
							1	Pull down CAP pin to ground

Initial state: All are the power down modes.

Enable the power down preparation before the chip will be shut down.

Output mode (SE/BTL)								
MSB							LSB	Function
1	1	1	S/B	0	0	0	0	Output mode, mixer control and audio format
			0					Output mode is BTL
			1					Output mode is SE

Initial state: Output mode is BTL mode.

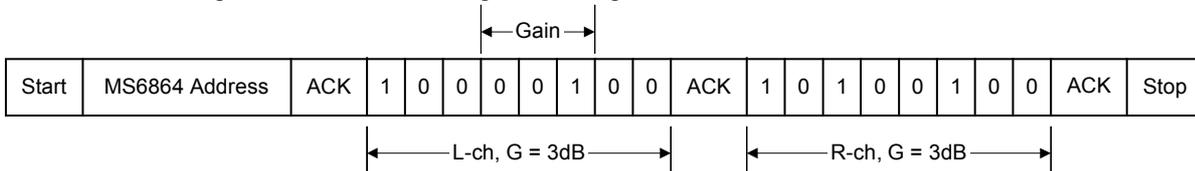

I²C Initial code and status

MSB	LSB							Function	Initial status
0	0	1	1	1	1	1	1	L-ch, Attenuation and Mute	Mute On
0	1	1	1	1	1	1	1	R-ch, Attenuation and Mute	Mute On
1	0	0	0	0	0	0	0	L-ch, Input Gain	0dB
1	0	1	0	0	0	0	0	R-ch, Input Gain	0dB
1	1	0	1	1	1	1	1	Power Down Mode	All devices are power down
1	1	1	0	0	0	0	0	Output mode (SE/BTL)	BTL

I²C CODE EXAMPLE

Input gain

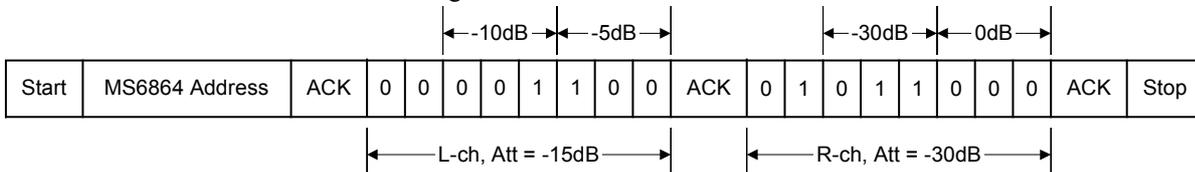

Set the left channel gain to be 3dB and the right channel gain to be 3dB

The left and right input channels are independent.

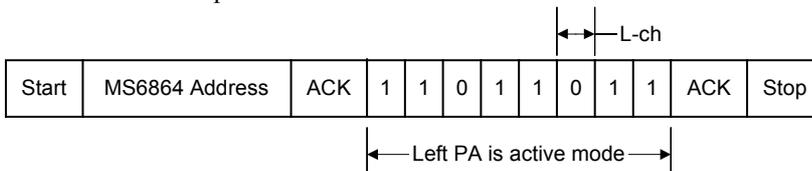

Input Attenuation

Set the left channel to be -15dB and the right channel to be -30dB

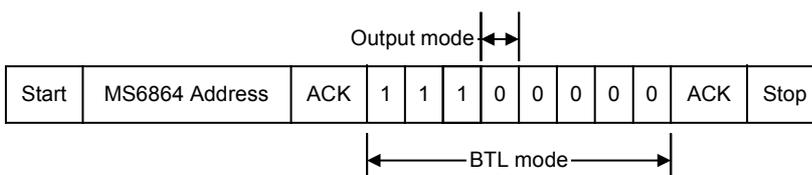

Power down mode

Set the L-ch PA output to be active mode.

Output mode

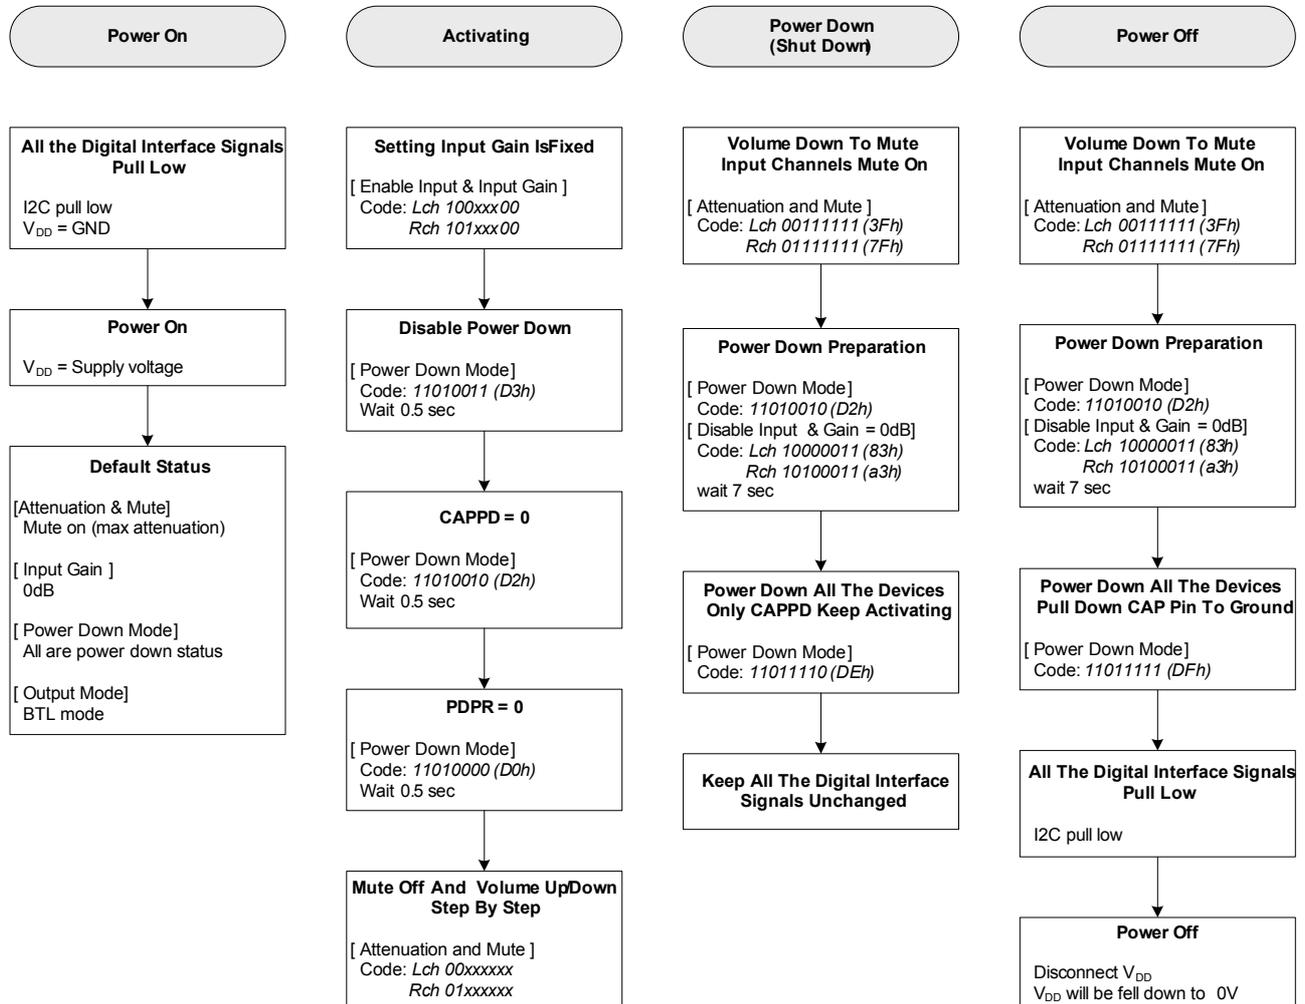

Set the output mode to be BTL mode

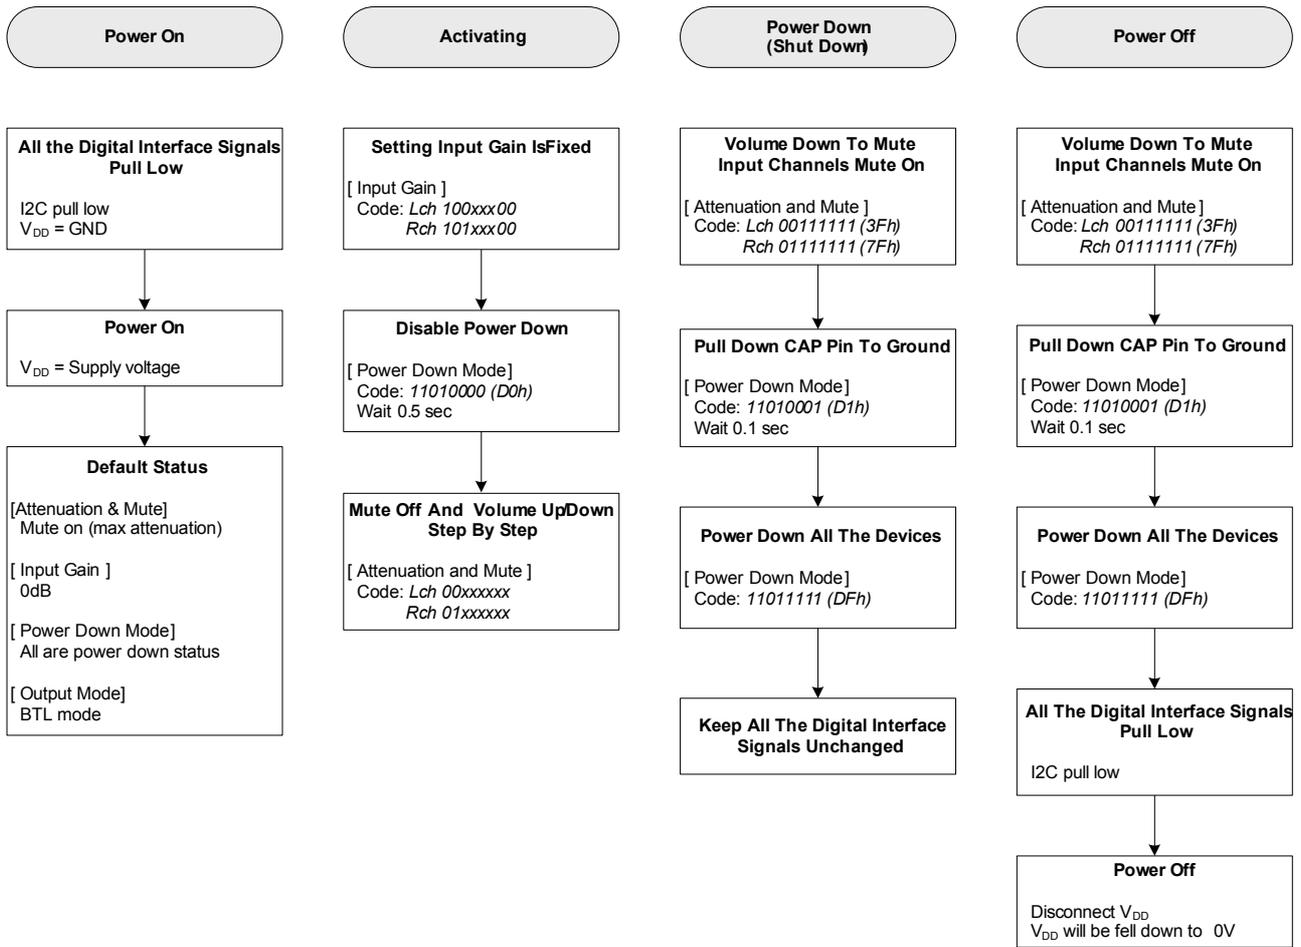

OPERATION PROCEDURE

The sequence of operation: power on → active → power down → active → power off. The basic flowcharts are as follows:

For HP mode and HP/BTL mode

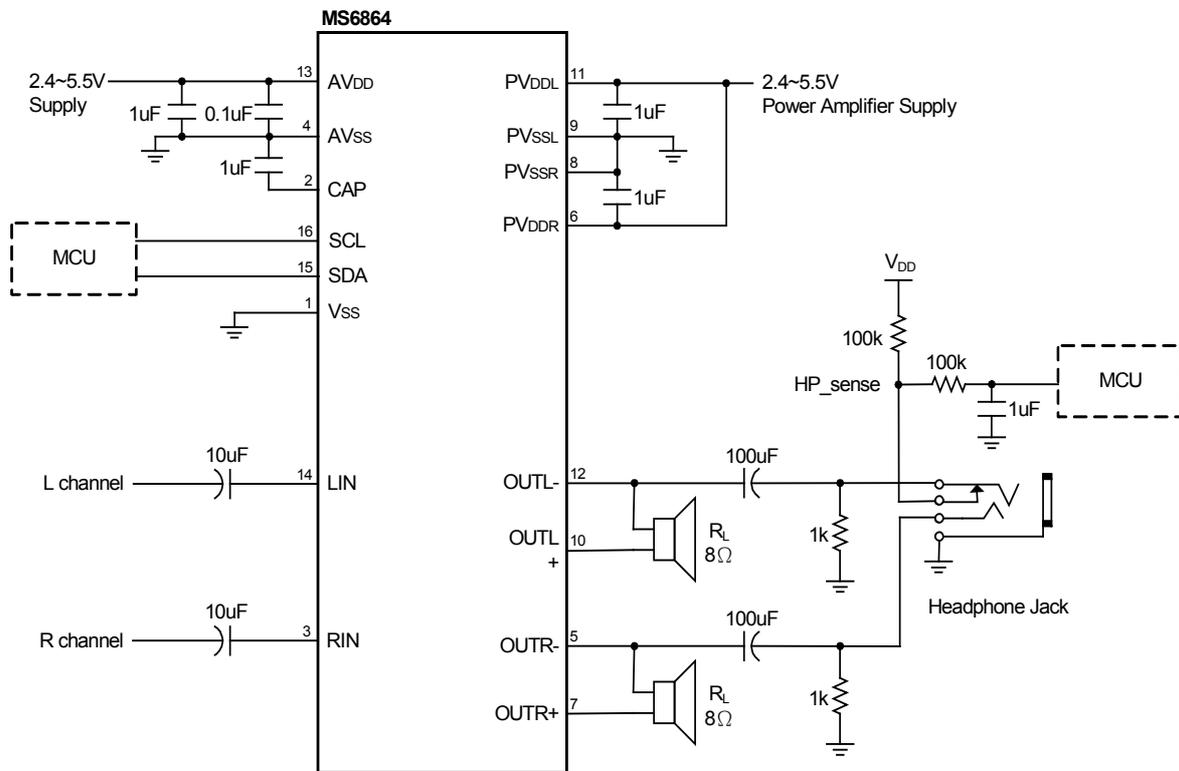

For BTL mode only

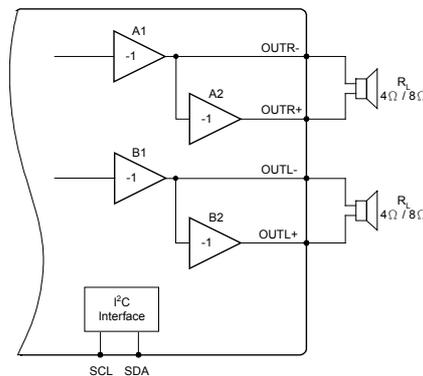

APPLICATION INFORMATION

A base application circuit

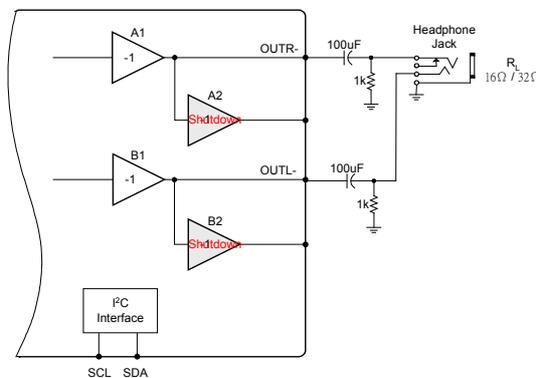

Output mode operation -- SE mode and BTL mode

The output has two modes, SE mode and BTL mode. The mode is selected by I2C code via MCU. In BTL mode, the outputs of A1(B1) and A2(B2) are then used to drive the speakers(4Ω/8Ω).

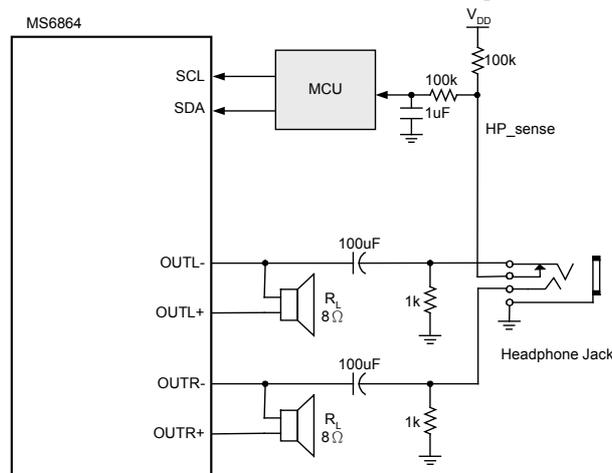

In the SE mode, the amplifiers A2 and B2 are shutdown, and become the high output impedance states.

Headphone sense

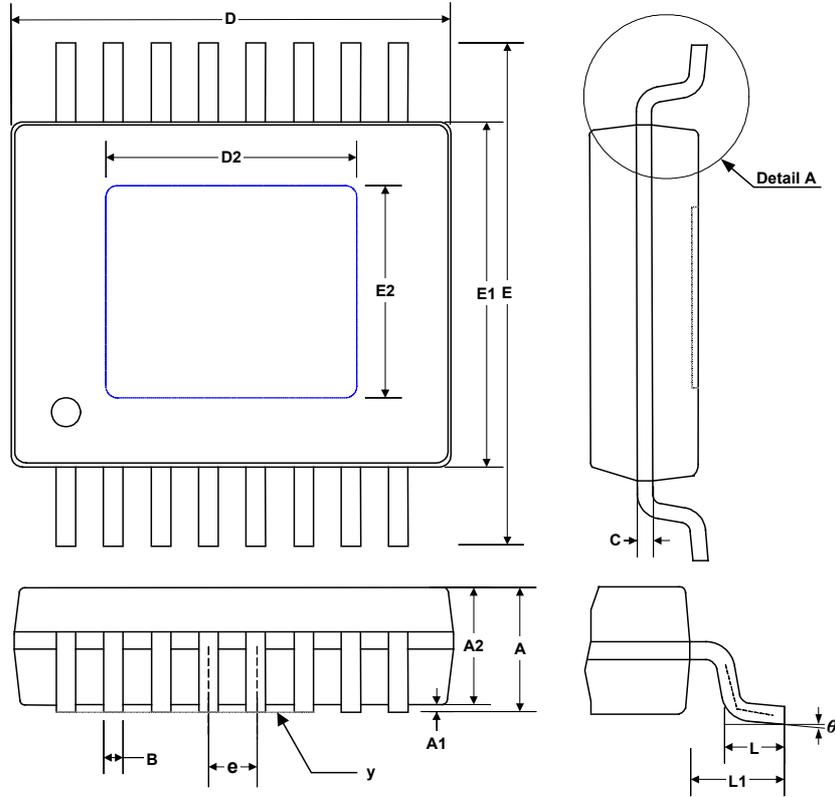

The output mode is SE or BTL that is decided by a headphone. It has to be set SE mode when a headphone is plug-in status. The output mode is selected by I2C command code by MCU. Please note that the MS6864 don't detect a headphone automatically. Thus a detect function is executed via MCU. An operation diagram is shown as follows:

The HP_sense pin is high when a headphone is plug-in.
The HP_sense pin is low when a headphone is not plug-in.

DEMO BOARD

Function description

Label 1: Supply Input

Supply voltage range is 2.4V to 5.5V.

Label 2: Reset

All I/O pins are reset to default values.

Label 3: Headphone Jack

Used 3.5mm diameter of headphone with 32ohm

Label 4: Speaker Output

Connected to speaker with 8ohm or 4 ohm

Label 5: Signal Input

Connected to audio signals.

Label 6: LED Indicator

The LEDs indicate the chip status and IR received status.

Power ON status, it is green-dark blink twice and then keeps on a light state.

Power OFF status, it is green-dark blink four times and then keeps on a dark state.

It is green-dark blink once when the MCU has received the function code correctly.

SE mode and BTL mode operation

The headphone controls operational mode. System enters SE mode when headphone jack is empty.

When a set of headphone plugged into the jack, the system switched to BTL mode.

IR Controller

MS6864

1 Stereo inputs / 2W PA output
integrated Volume Control

Power ON/OFF : The power key.

Press the key once to set power-on or power-off for MS6864.

The default values are GAIN 0dB, ATTENUATION -20dB and MUTE-ON.

VOL+, VOL- : The volume control keys.

The volume control in 1.25dB/step as the switch is pressed once, the range is -77.5dB to 0dB.

Gain+, Gain- : The gain control keys.

The gain control in 3dB/step as the switch is pressed once, the range is 0dB to 21dB.

Mute : The mute key

Press the key once to set mute-on or mute-off.

PD/Active : The power down key.

Press the key once to set power-down or activation for MS6864.

Circuit
