

OVERVIEW

The SM5839A is an 8-bit variable-length shift register. The input pins can be configured to function as a 2 to 128-step shift register. The shift clock has a maximum frequency of 54 MHz, making it ideal for high-speed digital signal processing.

FEATURES

- 2 to 128-step selectable variable-length shift register
- Static circuitry
- 8-bit (byte) word length
- Selectable circulating/non-circulating storage
- 54 MHz maximum operating clock frequency (standard-voltage specification)
- Supply voltage
 - 5.0 ± 0.5 V (standard-voltage specification)
 - 2.7 to 4.5 V (low-voltage specification)
- TTL-compatible input/outputs
- Molybdenum-gate CMOS
- Package
 - 28-pin DIP (SM5839AP)
 - 28-pin VSOP (SM5839AV)

FUNCTIONAL DESCRIPTION

Initialization

After power is first applied, up to a maximum of 128 input data cycles are considered invalid. However, any cycle that momentarily sets the register length to 2 steps (by setting S1 to S6 all LOW) and then to the desired value is considered to be the first valid cycle.

Resister Length Select

The S0 to S6 inputs set the register length (L) to the decimal-value given by the following equation using positive logic (HIGH = 1 and LOW = 0).

$$L = 64 \cdot (S6) + 32 \cdot (S5) + 16 \cdot (S4) + 8 \cdot (S3) + 4 \cdot (S2) + 2 \cdot (S1) + (S0) + 1$$

Length	S6	S5	S4	S3	S2	S1	S0
128	1	1	1	1	1	1	1
127	1	1	1	1	1	1	0
126	1	1	1	1	1	0	1
125	1	1	1	1	1	0	0
↓	↓	↓	↓	↓	↓	↓	↓
66	1	0	0	0	0	0	1
