

GENERAL DESCRIPTION

The L1117G Series are positive and low drop- out three-terminal voltage regulators with 1A output current capability. These devices are designed for use in low voltage applica- tions that offers lower dropout voltage and faster transient response.

These devices are fully protected against over current faults, over temperature operation, reversed input polarity, reversed lead insertion, transient voltage spike ...etc.

On-Chips trimming the reference voltage to 2% and features the low dropout of maximum 1.45 volts.

The L1117G Series regulators offer fixed and adjustable voltage options available in the popular industry standard SOT-223, TO-220, TO-252 and TO-263 packages.
