74ABT574 Octal D-Type Flip-Flop with 3-STATE Outputs

74ABT574

Functional Description

The ABT574 consists of eight edge-triggered flip-flops with individual D-type inputs and 3-STATE true outputs. The buffered clock and buffered Output Enable are common to all flip-flops. The eight flip-flops will store the state of their individual D inputs that meet the setup and hold times requirements on the LOW-to-HIGH Clock (CP) transition.

With the Output Enable (\overline{OE}) LOW, the contents of the eight flip-flops are available at the outputs. When \overline{OE} is HIGH, the outputs are in a high impedance state. Operation of the \overline{OE} input does not affect the state of the flip-flops.
