2 YEAR WARRANTY

The A and F Series offer high input/output isolation of 500VDC with only 1mV rms (40mV pk-pk) output ripple and noise. Other premium performance features include line and load regulation of less than $\pm 0.1\%$ and efficiencies of up to 69%. The converters are encapsulated in a 2 x 2 inch industry standard package with a 0.38 inch profile. The six sided copper case allows optimum thermal conductivity and provides shielding for EMI/RFI suppression. A Pi input filter reduces reflected ripple.

Reliable operation is assured through the use of efficient, design-derated components and by heatsinking all dissipating elements directly to the metal case. This permits operation from -25°C to $+71^{\circ}\text{C}$ with no derating or additional heatsinking required. A and F Series DC/DC converter are suitable for a wide range of general industrial applications, especially where low noise levels are required.

Notes

- 1 Maximum.
- 2 Measured from high line to low line.
- 3 Measured from full load to no load.
- 4 The A series case is connected to output common for all input voltages except 48V when it is connected to + input.
- 5 Fixed frequency design provides for easier input filtering and better noise performance.
- 6 The input voltage range can be increased to 10% under reduced loads. Please contact the factory for details.
