

FEATURES

- IAW DESC Drawing 87042
- SPST, Normally Open
- Up to 1200 V RMS Isolation
- CMOS or TTL Compatible Input
- Power FET Output for Low On-state Resistance
- Full Military Temperature Operation:
-55°C to +110°C
- Military Environmental Screening Available
- Improved Thermal Characteristics
- Built and tested per Y level screening requirement
of MIL-R-28750

GENERAL DESCRIPTION

The MII 53030 is a military SPST solid-state relay. This light-weight device is resistant to damage from shock and vibration, and immune to contact-related problems (contamination, arcing) associated with mechanical equivalents.

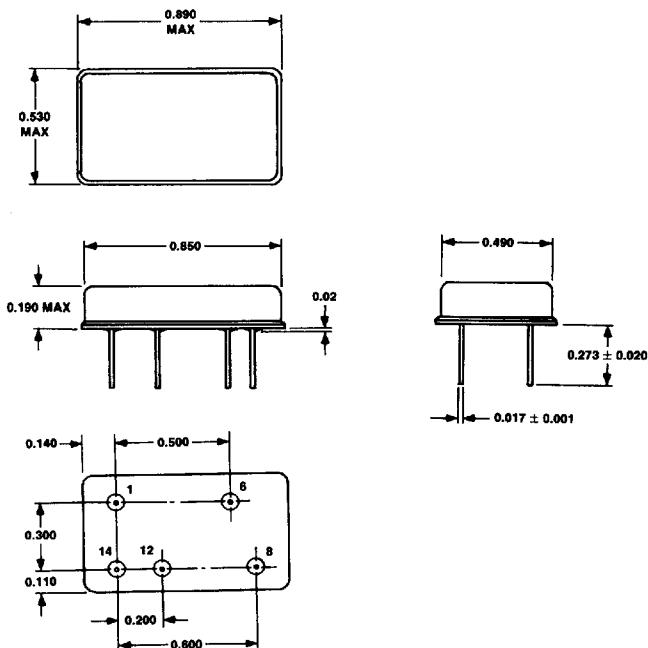

Optical coupling between the input and output stages provides effective isolation up to 1200 volts AC RMS. Power FET outputs eliminate bipolar offset, and minimize output voltage drop.

The control input logic is CMOS and TTL compatible, and will accommodate bias supplies ranging between 3.8 and 32 VDC. A built-in Schmitt trigger increases noise margin when using the device in the CMOS input mode.

This solid-state relay is ideal for use in military systems, or wherever high reliability, low power actuation, and light weight are design considerations. Applications include general purpose signal switching and electronic load control.
