DESCRIPTION

P3127 is a high impedance transformer for applications where high performance and safety isolation to the most exacting international standards are required in a compact case size.

In conjunction with external protection (e.g. fuses, zener diodes, etc.) the device is compliant with EN 50020 for peak rated voltage $\leq 375V$.

P3127 has a turns ratio of 1.732:1 giving an impedance transformation of 3:1.

P3127 is designed for "listening" applications when placed across a line, presenting a very high impedance to minimize circuit loading. Signal performance is equivalent to ETAL® P1487.
