

1.5°C ACCURATE DIGITAL TEMPERATURE SENSOR WITH SPI™ INTERFACE

FEATURES

- **Controlled Baseline**
 - One Assembly/Test Site, One Fabrication Site
- **Extended Temperature Performance of -40°C to 125°C**
- **Enhanced Diminishing Manufacturing Sources (DMS) Support**
- **Enhanced Product-Change Notification**
- **Qualification Pedigree ⁽¹⁾**
- **Digital Output: SPI-Compatible Interface**
- **Resolution: 12-Bit + Sign, 0.0625°C**

(1) Component qualification in accordance with JEDEC and industry standards to ensure reliable operation over an extended temperature range. This includes, but is not limited to, Highly Accelerated Stress Test (HAST) or biased 85/85, temperature cycle, autoclave or unbiased HAST, electromigration, bond intermetallic life, and mold compound life. Such qualification testing should not be viewed as justifying use of this component beyond specified performance and environmental limits.

- **Accuracy: $\pm 1.5^{\circ}\text{C}$ from -25°C to 85°C (max)**
- **Low Quiescent Current: 50 μA (max)**
- **Wide Supply Range: 2.7 V to 5.5 V**
- **Tiny SOT23-6 Package**
- **Operation to 150°C**

APPLICATIONS

- **Power-Supply Temperature Monitoring**
- **Computer Peripheral Thermal Protection**
- **Notebook Computers**
- **Battery Management**
- **Environmental Monitoring**

DESCRIPTION

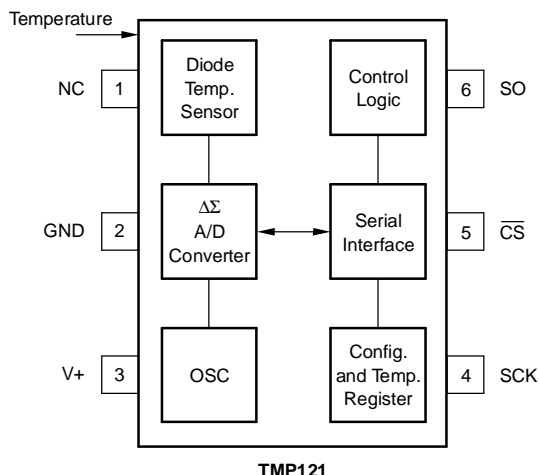

The TMP121 and TMP123 are SPI-compatible temperature sensors available in the tiny SOT23-6 package. Requiring no external components, the TMP121 and TMP123 are capable of measuring temperatures within 2°C of accuracy over a temperature range of -40°C to 125°C . Low supply current and a supply range from 2.7 V to 5.5 V make the TMP121 and TMP123 excellent candidates for low-power applications.

The TMP121 and TMP123 are ideal for extended thermal measurement in a variety of communication, computer, consumer, environmental, industrial, and instrumentation applications.

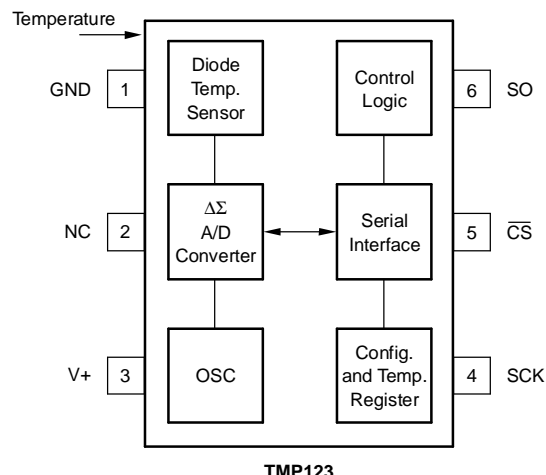

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

SPI is a trademark of Texas Instruments.

NC = No Connection⁽¹⁾

(1) Pins Labeled NC should be left floating or connected to GND.

NC = No Connection⁽¹⁾

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

ORDERING INFORMATION

T _A	PACKAGE-LEAD	ORDERABLE PART NUMBER	PACKAGE MARKING
-40°C to 125°C	SOT23-6 (DBV) Reel of 3000	TMP121AQDBVREP	121E
		TMP123AQDBVREP ⁽¹⁾	123E

(1) Product Preview

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

		UNIT
V+	Power supply	7 V
	Input voltage ⁽²⁾	-0.3 V to 7 V
	Input current	10 mA
	Operating temperature range	-55°C to 150°C
	Storage temperature range	-60°C to 150°C
T _J max	Junction temperature	150°C
	Lead temperature (soldering)	300°C

(1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not supported.

(2) Input voltage rating applies to all TMP121 and TMP123 input voltages.

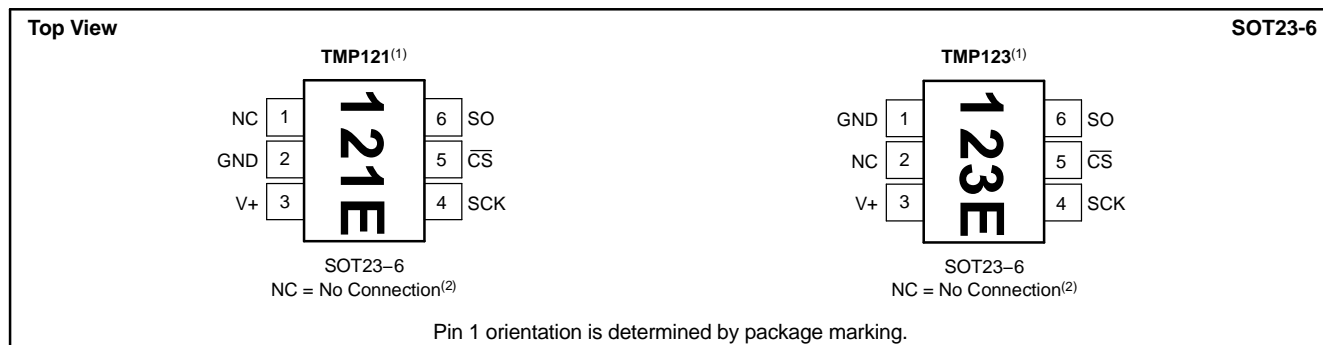

ELECTRICAL CHARACTERISTICS

At $T_A = -40^{\circ}\text{C}$ to 125°C and $V_+ = 2.7\text{ V}$ to 5.5 V , unless otherwise noted

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT

APPLICATION INFORMATION

The TMP121 and TMP123 are 12-bit plus sign read-only digital temperature sensors optimal for thermal management and thermal protection applications. The TMP121 and the TMP123 communicate through a serial interface that is SPI-compatible. Temperature is converted to a 12-bit plus sign data word with 0.0625°C resolution. The TMP121 and TMP123 are specified for a temperature range of –40°C to 125°C, with operation extending from –55°C to 150°C.

The TMP121 and TMP123 are optimal for low power applications, with a 0.5 s conversion period for reduced power consumption. The TMP121 and TMP123 are specified for a supply voltage range of 2.7 V to 5.5 V, and also feature a hardware shutdown to provide additional power savings.

The TMP121 and TMP123 require no external components for operation, though a 0.1-μF supply bypass capacitor is recommended. Figure 5 shows typical connections for the TMP121 and TMP123.

NOTE: Pins labeled NC should be left floating or connected to GND.

Figure 5. Typical Connections of the TMP121 and TMP123

The sensing device of both the TMP121 and TMP123 is the chip itself; the die flag of the lead frame is thermally connected to pin 2 of the TMP121 and of the TMP123. Thermal paths run through the package leads as well as the plastic package, and the lower thermal resistance of metal causes the leads to provide the primary thermal path. The GND pin (pin 2) of the TMP121 and the NC pin (pin 2) of the TMP123 are thermally connected to the metal lead frame and are the best choice for thermal input.

To maintain accuracy in applications requiring air or surface temperature measurement, care should be taken to isolate the package and leads from ambient air temperature.

APPLICATION INFORMATION (continued)

TEMPERATURE REGISTER

The temperature register of the TMP121 and TMP123 is a 16 bit, signed read-only register that stores the output of the most recent conversion. Up to 16 bits can be read to obtain data and are described in [Table 1](#). The first 13 bits are used to indicate temperature with bits D2 = 0 and D1, D0 in a high impedance state. Data format for temperature is summarized in [Table 2](#). Following power-up or reset, the temperature register reads 0°C until the first conversion is complete.

Table 1. Temperature Register

D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
T12	T11	T10	T9	T8	T7	T6	T5	T4	T3	T2	T1	T0	0	Z	Z

Table 2. Temperature Data Format

TEMPERATURE (°C)	DIGITAL OUTPUT ⁽¹⁾ (BINARY)	HEX
150	0100 1011 0000 0000	4B00
125	0011 1110 1000 0000	3E80
25	0000 1100 1000 0000	0C80
0.0625	0000 0000 0000 1000	0008
0	0000 0000 0000 0000	0000
-0.0625	1111 1111 1111 1000	FFF8
-25	1111 0011 1000 0000	F380
-55	1110 0100 1000 0000	E480

(1) The last two bits are high impedance and are shown as 00 in the table.

COMMUNICATING WITH THE TMP121

The TMP121 and TMP123 continuously convert temperatures to digital data while \overline{CS} is high. \overline{CS} must be high for a minimum of one conversion time (320 ms max) to update the temperature data. Reading temperature data from the TMP121 and TMP123 is initiated by pulling \overline{CS} low, which causes any conversion in progress to terminate, and places the device into analog shutdown. Quiescent current is reduced to 1 μ A during analog shutdown. Once \overline{CS} is pulled low, temperature data from the last completed conversion prior to dropping \overline{CS} is latched into the shift register and clocked out at SO on the falling SCK edge. The 16-bit data word is clocked out sign bit first, followed by the MSB. Any portion of the 16-bit word can be read before raising \overline{CS} . The TMP121 and TMP123 typically require 0.25 s to complete a conversion and consume 50 μ A of current during this period. If \overline{CS} is held high for longer than one conversion time period the TMP121 and TMP123 goes into idle mode for 0.25 s, requiring only 20 μ A of current. A new conversion begins every 0.5 s. [Figure 6](#) describes the conversion timing for the TMP121 and TMP123.

Figure 6. Conversion Time and Period

The serial data of the TMP121 and TMP123 consists of 12-bit plus sign temperature data followed by a confirmation bit and two high impedance bits. Data is transmitted in binary two's complement format. [Figure 7](#) describes the output data of the TMP121 and TMP123.

Figure 7. Data READ

Timing Diagrams

The TMP121 and TMP123 are SPI-compatible. Figure 8 and Figure 9 describe the various timing requirements, with parameters defined in Table 3.

Table 3. Timing Description

		MIN	MAX	UNIT
t_1	SCK period	100		ns
t_2	SCK falling edge to output data delay		30	ns
t_3	\overline{CS} to rising edge SCK set-up time	40		ns
t_4	\overline{CS} to output data delay		30	ns
t_5	\overline{CS} rising edge to output high impedance		30	ns

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

- Falls within JEDEC MO-178 Variation AB, except minimum lead width.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
