DM74LS243
Quadruple Bus Transceiver

General Description

This four data line transceiver is designed for asynchronous two-way communications between data buses. It can be used to drive terminated lines down to 133Ω.

Features

■ Two-way asynchronous communication between data buses
■ PNP inputs reduce DC loading on bus line
■ Hysteresis at data inputs improves noise margin

Ordering Code:

Absolute Maximum Ratings(Note 2)

Supply Voltage	7V
Input Voltage	
Any G	7V
A or B	5.5V
Operating Free Air Temperature Range	0°C to +70°C
Storage Temperature Range	−65°C to +150°C

Note 2: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
