

Ultra Precision Bulk Metal Film Resistors

查询"4895"供应商

4800 Series

- **BS/CECC approved**
- **Tolerances down to 0.005%**
- **Current noise and distortion below level of practicable measurement**
- **Low thermal e.m.f**
- **Ideal resistor for precision instrumentation**
- **Use of bulk metal gives superior stability**
- **Planar construction gives low residual capacitance and inductance**

Construction

The resistor element is an etched bulk metal foil, bonded to an alumina substrate. Connections to the foil are made by copper wires welded to the foil to minimise thermal e.m.f. Before encapsulation, the resistor element is coated with silicone rubber to isolate the element from mechanical stress which would adversely affect the carefully balanced construction and result in poor resistance/temperature characteristics.

Terminations

Material

Solder coated copper wire

Strength

The terminations meet the requirements of IEC 68.2.21.

Solderability

The terminations meet the requirements of IEC 115-1, Clause 4.17.3.2.

Marking

Type reference, resistance value, tolerance and date code are legend marked. The resistance value conforms to IEC 62.

Solvent Resistance

The protection will withstand all normal industrial solvents suitable for cleaning printed circuit boards.

Packaging

All components are supplied loose packed in either plastic bags or panel boxes. Quantity per box will depend on resistor size.
