

4 Stereo Inputs and 4-Channel Outputs Volume, Tone, Balance, Fader, Loudness, and Selectable Input Gain

FEATURES

- Operation range : 2.7V~5V
- 4 stereo inputs with selectable input gain
- 4 independent speaker controls for fader and balance
- Tone controls (treble and bass) and loudness function
- Independent mute function
- Volume control in 1.25 dB/step
- I²C interface
- Components less and good PSRR
- Housed in SOP32 packages

APPLICATIONS

- Portable audio device
- Car stereo audio
- Hi-Fi audio system
- Cross-reference:
PT2312

DESCRIPTION

The MS6712 is a 4 stereo inputs/4-channel outputs digital control audio processor for the low voltage operation. Volume, tone (bass and treble), balance (left/right), and fader (front/rear) processor are incorporated into a single chip. The MS6712 also has the loudness function and selectable input gain. These functions can be built a Hi-Fi audio system easily. All functions are programmable via the serial I²C bus. The default states of the chip as the power is on are: the volume is -78.75dB, the stereo 4 is selected, all the speakers are mute and the gains of the input stage, the bass and the treble are 0dB.

I²C BUS DESCRIPTION

Start and Stop Conditions

A start condition is activated when the SCL is set to HIGH and SDA shifts from HIGH to LOW state. The stop condition is activated when SCL is set to HIGH and SDA shifts from LOW to HIGH state. Please refer to the timing diagram below.

SCL : Serial Clock Line, SDA : Serial Data Line

Data Validity

A data on the SDA line is considered valid and stable only when the SCL signal is in HIGH state. The HIGH and LOW states of the SDA line can only change when the SCL signal is LOW. Please refer to the figure below.

Byte Format

Every byte transmitted to the SDA line consists of 8 bits. Each byte must be followed by an acknowledge bit. The MSB is transmitted first.

Acknowledge

During the Acknowledge clock pulse, the master (up) put a resistive HIGH level on the SDA line. The peripheral (audio processor) that acknowledges has to pull-down (LOW) the SDA line during the Acknowledge clock pulse so that the SDA line is in a stable LOW state during this clock pulse. Please refer to the diagram below.

The audio processor that has been addressed has to generate an Acknowledge after receiving each byte, otherwise, the SDA line will remain at the HIGH level during the ninth (9th) clock pulse. In this case, the master transmitter can generate the STOP information in order to abort the transfer.

Timing of SDA and SCL Bus Lines

Standard Mode

Symbol	Parameter	Min	Max	Unit
f_{SCL}	SCL clock frequency	0	100	kHz
$t_{HD;STA}$	Hold time (repeated) START condition. After this period, the first clock pulse is generated	4.0	-	us
t_{LOW}	LOW period of the SCL clock	4.7	-	us
t_{HIGH}	HIGH period of the SCL clock	4.0	-	us
$t_{SU;STA}$	Set-up time for a repeated START condition	4.7	-	us
$t_{HD;DAT}$	Data hold time: For I ² C-bus devices	0	3.45	us
$t_{SU;DAT}$	Data-set-up time	250	-	ns
t_r	Rise time of both SDA and SCL signals	-	1000	ns
t_f	Fall time of both SDA and SCL signals	-	300	ns
$t_{SU;STO}$	Set-up time for STOP condition	4.0	-	us
t_{BUF}	Bus free time between a STOP and START condition	4.7	-	us
C_b	Capacitive load for each bus line	-	400	pF
V_{nL}	Noise margin at the LOW level for each connected device (including hysteresis)	$0.1V_{DD}$	-	V
V_{nH}	Noise margin at the HIGH level for each connected device (including hysteresis)	$0.2V_{DD}$	-	V

BUS INTERFACE

Data are transmitted to and from the MCU to the MS6712 via the SDA and SCL. The SDA and SCL make up the BUS interface. It should be noted that pull-up resistors must be connected to the positive supply voltage.

Interface Protocol

The format consists of the following

- A START condition
- A chip address byte including the MS6712 address. (7bits)
- The 8th bit of the byte must be "0".(write=0, read=1)
- MS6712 must always acknowledge the end of each transmitted byte.
- A data sequence (N-bytes + Acknowledge)
- A STOP condition

Address Code

The chip address of the MS6712 is 88H.

Data Bytes Description

The default states of the chip as the power is on are: the volume is -78.75dB, the stereo 4 is selected, all the speakers are mute and the gains of the input stage, the bass and the treble are 0dB.

DEMO BOARD

The demo board used IR technique controller to control the MS6712. The default states of demo board are Stereo 4, Input Gain 0dB, Volume -20dB, Attenuator Speakers 0dB, Loudness Off, Bass 0dB and Treble 0dB.

Label 1: Supply Voltage

The AVDD and DVDD should be the same supply voltage, the supply range is 2.7~5.5 VDC.

Label 2: LED Indicator

The LEDs indicate stereo input channel , IR received status and power status. It is red-dark blink once when the MCU has received the function code correctly.

Label 3: Output Section

There are four output channels in the section that divide into front output and rear output. Please connected to a post-power-amplifier, as active speaker.

Label 4: Input Section

There are four stereo inputs in the section. Please input stereo audio signal, as music or sine wave.

Label 5: MCU Reset

The MS6712 will be loaded the default values by MCU. The default states are Stereo 4, Input Gain 0dB, Volume -20dB, Attenuator Speakers 0dB, Loudness Off, Bass 0dB and Treble 0dB. The stereo 4 is connected internally, but not available on pins.

IR Controller

IN1, IN2, IN3, IN4 : Select Stereo Input.

IN1, 2, 3, 4 represents Stereo Input 1, 2, 3, 4. The active input will be indicated by the LEDs.

VOL+, VOL- : The volume control keys.

The volume control in 1.5dB/step as the switch is pressed once, the range is -79dB to 0dB.

LF-speaker , RF-speaker, LR-speaker, and RR-speaker are synchronic action.

Gain+, Gain- : The gain control keys for stereo input.

The gain control in 3.75dB/step as the switch is pressed once, the range is 0dB to 11.25dB.

LF+, LF- : The attenuation control keys for Left-Front speaker.

The attenuation in 1.25dB/step as the switch is pressed once, the range is -37.5dB to 0dB.

RF+, RF- : The attenuation control keys for Right-Front speaker.

The attenuation in 1.25dB/step as the switch is pressed once, the range is -37.5dB to 0dB.

LR+, LR- : The attenuation control keys for Left-Rear speaker.

The attenuation in 1.25dB/step as the switch is pressed once, the range is -37.5dB to 0dB.

RR+, RR- : The attenuation control keys for Right-Rear speaker.

The attenuation in 1.25dB/step as the switch is pressed once, the range is -37.5dB to 0dB.

TRE+, TRE- : The treble control keys.

The treble control in 2dB/step as the switch is pressed once, the range is -14dB to 14dB.

BAS+, BAS- : The bass control keys.

The bass control in 2dB/step as the switch is pressed once, the range is -14dB to 14dB.

Loud : The loudness key

Press the key once to set loudness on or loudness off.

Mute : The mute key controls all output speaker outputs

Press the key once to set mute-on or mute-off for four speaker outputs.
