54LS378/DM74LS378 Parallel D Register with Enable

General Description

The 'LS378 is a 6-bit register with a buffered common enable. This device is similar to the 'LS174, but with common Enable rather than common Master Reset.

Features

- 6-bit high speed parallel register
- Positive edge-triggered D-type inputs
- Fully buffered common clock and enable inputs
- Input clamp diodes limit high speed termination effects
- Full TTL and CMOS compatible

Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage 7V
 Input Voltage 10V
 Operating Free Air Temperature Range
 54LS -54°C to +125°C
 DM74LS 0°C to +70°C
 Storage Temperature Range -65°C to +150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Functional Description

The 'LS378 consists of eight edge-triggered D-type flip-flops with individual D inputs and Q outputs. The Clock (CP) and Enable (\bar{E}) inputs are common to all flip-flops.

When the \bar{E} input is LOW, new data is entered into the register on the LOW-to-HIGH transition of the CP input. When the \bar{E} input is HIGH the register will retain the present data independent of the CP input.
