

[^0]

| Absolute Maximum Ratings（Note 1） |  | Recommended Operating |
| :---: | :---: | :---: |
| Supply Voltage（ $\mathrm{V}_{\mathrm{CC}}$ ） | -0.5 V to +7.0 V | Conditions |
| DC Input Diode Current（ $\mathrm{I}_{\text {IK }}$ ） |  | Supply Voltage（ $\mathrm{V}_{\mathrm{CC}}$ ） |
| $\mathrm{V}_{\mathrm{I}}=-0.5 \mathrm{~V}$ | －20 mA | ACQ 2.0 V to 6.0 V |
| $\mathrm{V}_{\mathrm{I}}=\mathrm{V}_{C C}+0.5 \mathrm{~V}$ | ＋20 mA | ACTQ 4.5 V to 5.5 V |
| DC Input Voltage（ $\mathrm{V}_{\mathrm{l}}$ ） | -0.5 V to $\mathrm{V}_{\mathrm{CC}}+0.5 \mathrm{~V}$ | Input Voltage（ $\mathrm{V}_{\mathrm{l}}$ ） $\mathrm{OV}^{\text {to }} \mathrm{V}_{\mathrm{CC}}$ |
| DC Output Diode Current（ $\mathrm{l}_{\mathrm{OK}}$ ） |  | Output Voltage（ $\mathrm{V}_{\mathrm{O}}$ ） 0 V to $\mathrm{V}_{\mathrm{CC}}$ |
| $\mathrm{V}_{\mathrm{O}}=-0.5 \mathrm{~V}$ | －20 mA | Operating Temperature（ $\mathrm{T}_{\mathrm{A}}$ ）$-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |
| $\mathrm{V}_{\mathrm{O}}=\mathrm{V}_{\mathrm{CC}}+0.5 \mathrm{~V}$ | ＋20 mA | Minimum Input Edge Rate $\Delta \mathrm{V} / \Delta \mathrm{t}$ |
| DC Output Voltage（ $\mathrm{V}_{\mathrm{O}}$ ） | -0.5 V to $\mathrm{V}_{\mathrm{CC}}+0.5 \mathrm{~V}$ | ACQ Devices |
| DC Output Source |  | $\mathrm{V}_{\text {IN }}$ from $30 \%$ to $70 \%$ of $\mathrm{V}_{\text {CC }}$ |
| or Sink Current（ $\mathrm{l}_{\mathrm{O}}$ ） | $\pm 50 \mathrm{~mA}$ | $\mathrm{V}_{\text {CC }}$＠3．0V，4．5V，5．5V $125 \mathrm{mV} / \mathrm{ns}$ |
| DC V ${ }_{C C}$ or Ground Current per Output Pin（ $I_{\text {CC }}$ or $I_{G N D}$ ） | $\pm 50 \mathrm{~mA}$ | Minimum Input Edge Rate $\Delta \mathrm{V} / \Delta \mathrm{t}$ ACTQ Devices |
| Storage Temperature（ $\mathrm{T}_{\mathrm{STG}}$ ） | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ | $\mathrm{V}_{\text {IN }}$ from 0.8 V to 2.0 V |
| DC Latch－Up Source or |  | $\mathrm{V}_{\text {CC }}$＠4．5V， 5.5 V ， $125 \mathrm{mV} / \mathrm{ns}$ |
| Sink Current | $\pm 300 \mathrm{~mA}$ |  |
| Junction Temperature（ $\mathrm{T}_{\mathrm{J}}$ ） |  | to the device may occur．The databook specifications should be met，with－ out exception，to ensure that the system design is reliable over its power |
| PDIP | $140^{\circ} \mathrm{C}$ | supply，temperature，and output／input loading variables．Fairchild does not recommend operation of FACT ${ }^{\text {TM }}$ circuits outside databook specifications． |

## FACT Noise Characteristics

The setup of a noise characteristics measurement is critical to the accuracy and repeatability of the tests．The following is a brief description of the setup used to measure the noise characteristics of FACT．

## Equipment：

Hewlett Packard Model 8180A Word Generator
PC－163A Test Fixture
Tektronics Model 7854 Oscilloscope
Procedure：
1．Verify Test Fixture Loading：Standard Load 50 pF ， $500 \Omega$ ．
2．Deskew the HFS generator so that no two channels have greater than 150 ps skew between them．This requires that the oscilloscope be deskewed first．It is important to deskew the HFS generator channels before testing．This will ensure that the outputs switch simultaneously．
3．Terminate all inputs and outputs to ensure proper load－ ing of the outputs and that the input levels are at the correct voltage．
4．Set the HFS generator to toggle all but one output at a frequency of 1 MHz ．Greater frequencies will increase DUT heating and effect the results of the measure－ ment．
5．Set the HFS generator input levels at 0 V LOW and 3 V HIGH for ACT devices and OV LOW and 5V HIGH for $A C$ devices．Verify levels with an oscilloscope．

Note 19： $\mathrm{V}_{\mathrm{OHV}}$ and $\mathrm{V}_{\text {OLP }}$ are measured with respect to ground reference．
Note 20：Input pulses have the following characteristics：$f=1 \mathrm{MHz}$ ， $\mathrm{t}_{\mathrm{r}}=3 \mathrm{~ns}, \mathrm{t}_{\mathrm{f}}=3 \mathrm{~ns}$ ，skew $<150 \mathrm{ps}$ ．

FIGURE 1．Quiet Output Noise Voltage Waveforms
$\mathrm{V}_{\mathrm{OLP}} / \mathrm{V}_{\mathrm{OLV}}$ and $\mathrm{V}_{\mathrm{OHP}} / \mathrm{V}_{\mathrm{OHV}}$ ：
－Determine the quiet output pin that demonstrates the greatest noise levels．The worst case pin will usually be the furthest from the ground pin．Monitor the output volt－ ages using a $50 \Omega$ coaxial cable plugged into a standard SMB type connector on the test fixture．Do not use an active FET probe．
－Measure $\mathrm{V}_{\text {OLP }}$ and $\mathrm{V}_{\text {OLV }}$ on the quiet output during the worst case for active and enable transition．Measure $\mathrm{V}_{\mathrm{OHP}}$ and $\mathrm{V}_{\mathrm{OHV}}$ on the quiet output during the worst case active and enable transition．
－Verify that the GND reference recorded on the oscillo－ scope has not drifted to ensure the accuracy and repeat－ ability of the measurements．
$V_{\text {ILD }}$ and $V_{\text {IHD }}$ ：
－Monitor one of the switching outputs using a $50 \Omega$ coaxial cable plugged into a standard SMB type connector on the test fixture．Do not use an active FET probe．
－First increase the input LOW voltage level， $\mathrm{V}_{\mathrm{IL}}$ ，until the output begins to oscillate or steps out a min of 2 ns ． Oscillation is defined as noise on the output LOW level that exceeds $\mathrm{V}_{\mathrm{IL}}$ limits，or on output HIGH levels that exceed $\mathrm{V}_{\mathrm{IH}}$ limits．The input LOW voltage level at which oscillation occurs is defined as $\mathrm{V}_{\text {ILD }}$ ．
－Next decrease the input HIGH voltage level， $\mathrm{V}_{\mathrm{IH}}$ ，until the output begins to oscillate or steps out a min of 2 ns ． Oscillation is defined as noise on the output LOW level that exceeds $\mathrm{V}_{\text {IL }}$ limits，or on output HIGH levels that exceed $\mathrm{V}_{\mathrm{IH}}$ limits．The input HIGH voltage level at which oscillation occurs is defined as $\mathrm{V}_{\mathrm{IHD}}$ ．
－Verify that the GND reference recorded on the oscillo－ scope has not drifted to ensure the accuracy and repeat－ ability of the measurements．

LIFE SUPPORT POLICY
FAIRCHILD＇S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION．As used herein：

1．Life support devices or systems are devices or systems which，（a）are intended for surgical implant into the body，or（b）support or sustain life，and（c）whose failure to perform when properly used in accordance with instructions for use provided in the labeling，can be rea－ sonably expected to result in a significant injury to the user．

2．A critical component in any component of a life suppor device or system whose failure to perform can be rea－ sonably expected to cause the failure of the life support device or system，or to affect its safety or effectiveness．
