5962-E1746

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

1. SCOPE

1.1 Scope. This drawing describes device requirements for class B microcircuits in accordance with 1.2.1 of MIL-STD-883, "Provisions for the use of MIL-STD-883 in conjunction with compliant non-JAN devices".

1.2 Part number. The complete part number shall be as shown in the following example:

5962-88535	01	Q	X
Drawing number	Device type (1.2.1)	Case outline (1.2.2)	Lead finish per MIL-M-38510

1.2.1 Device types. The device types shall identify the circuit function as follows:

Device type	Generic number	Circuit function	Cycle time
01	7C901-32, 39C01C	4-bit microprocessor slice	32 ns
02	7C901-27, 39C01D	4-bit microprocessor slice	27 ns

1.2.2 Case outlines. The case outlines shall be as designated in appendix C of MIL-M-38510, and as follows:

Outline letter	Case outline
Q	D-5 (40-lead, 2.096" x .620" x .225"), dual in-line package
X	C-5 (44-terminal, .662" X .662" X .120"), square chip carrier package
Y	See figure 1 (42-lead, 1.070" X .650" X .100"), flat package

1.3 Absolute maximum ratings. 1/

Supply voltage range	-0.5 V dc to +7.0 V dc
DC voltage applied to outputs in high Z state	-0.5 V dc to +7.0 V dc
DC input voltage	-0.5 V dc to +7.0 V dc
DC output current	30 mA
Maximum power dissipation 2/	1.0 W
Lead temperature (soldering, 10 seconds)	+300°C
Thermal resistance, junction-to-case (θ_{JC}):	
Cases Q and X	See MIL-M-38510, appendix C
Case Y	10°C/W
Junction temperature (T_J)	+175°C
Storage temperature range	-65°C to +150°C

1.4 Recommended operating conditions.

Supply voltage (V_{CC})	+4.5 V dc to +5.5 V dc
Input high voltage (V_{IH})	2.0 V dc to 6.0 V dc
Input low voltage (V_{IL})	-0.5 V dc to +0.8 V dc
Case operating temperature range (T_C)	-55°C to +125°C

1/ Stresses greater than those listed may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated on the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

2/ Must withstand the added P_D due to short circuit test; e.g., I_{OS} .

STANDARDIZED MILITARY DRAWING DEFENSE ELECTRONICS SUPPLY CENTER DAYTON, OHIO 45444	SIZE A		5962-88535
		REVISION LEVEL A	SHEET 2

2. APPLICABLE DOCUMENTS

2.1 Government specification, standard, and bulletin. Unless otherwise specified, the following specification, standard, and bulletin of the issue listed in that issue of the Department of Defense Index of Specifications and Standards specified in the solicitation, form a part of this drawing to the extent specified herein.

SPECIFICATION

MILITARY

MIL-M-38510 - Microcircuits, General Specification for.

STANDARD

MILITARY

MIL-STD-883 - Test Methods and Procedures for Microelectronics.

BULLETIN

MILITARY

MIL-BUL-103 - List of Standardized Military Drawings (SMD's).

(Copies of the specification, standard, and bulletin required by manufacturers in connection with specific acquisition functions should be obtained from the contracting activity or as directed by the contracting activity.)

2.2 Order of precedence. In the event of a conflict between the text of this drawing and the references cited herein, the text of this drawing shall take precedence.

3. REQUIREMENTS

3.1 Item requirements. The individual item requirements shall be in accordance with 1.2.1 of MIL-STD-883, "Provisions for the use of MIL-STD-883 in conjunction with compliant non-JAN devices" and as specified herein.

3.2 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-M-38510 and herein.

3.2.1 Terminal connections. The terminal connections shall be as specified on figure 2.

3.2.2 Functional block diagram. The functional block diagram shall be as specified on figure 3.

3.2.3 Case outlines. The case outlines shall be in accordance with 1.2.2 herein.

3.3 Electrical performance characteristics. Unless otherwise specified herein, the electrical performance characteristics are as specified in table I and shall apply over the full case operating temperature range.

3.4 Electrical test requirements. The electrical test requirements shall be the subgroups specified in table II. The electrical tests for each subgroup are described in table I.

3.5 Marking. Marking shall be in accordance with MIL-STD-883 (see 3.1 herein). The part shall be marked with the part number listed in 1.2 herein. In addition, the manufacturer's part number may also be marked as listed in MIL-BUL-103 (see 6.7 herein).

DESC FORM 105A
SEP 87

U. S. GOVERNMENT PRINTING OFFICE: 1989-749-033

- 1/ For test purposes, not more than 1 output should be shorted at one time. Duration of the short circuit should not exceed 1 second.
- 2/ The capacitance measurement shall be made between the indicated terminal and ground at a frequency of 1 MHz. The dc bias of the measuring instrument shall be less than ± 0.1 V. The ac signal amplitude shall be less than 50 mV RMS.
- 3/ AC parameters are tested using input rise and fall times of 3 ns and input pulse levels of GND to 3.0 V. Both input and output timing reference levels are 1.5 V.
- 4/ The setup time prior to the clock low to high transition is to allow time for data to be accessed, passed through the ALU, and returned to the RAM. It includes all the time from stable A and B addresses to the clock low to high transition, regardless of when the clock high to low transition occurs.
- 5/ Source addresses must be stable prior to the clock high to low transition to allow time to access the source data before the latches close. The A address may then be changed. The B address could be changed if it is not a destination; i.e. if data is not being written back into the RAM. Normally A and B are not changed during the clock low time.
- 6/ This parameter if not tested, shall be guaranteed to the limits specified in table I.
- 7/ Output disable tests performed with $C_L = 5$ pF and measured to 0.5 V change of output voltage level.

3.6 Certificate of compliance. A certificate of compliance shall be required from a manufacturer in order to be listed as an approved source of supply in MIL-BUL-103 (see 6.7 herein). The certificate of compliance submitted to DESC-ECC prior to listing as an approved source of supply shall affirm that the manufacturer's product meets the requirements of MIL-STD-883 (see 3.1 herein) and the requirements herein.

3.7 Certificate of conformance. A certificate of conformance as required in MIL-STD-883 (see 3.1 herein) shall be provided with each lot of microcircuits delivered to this drawing.

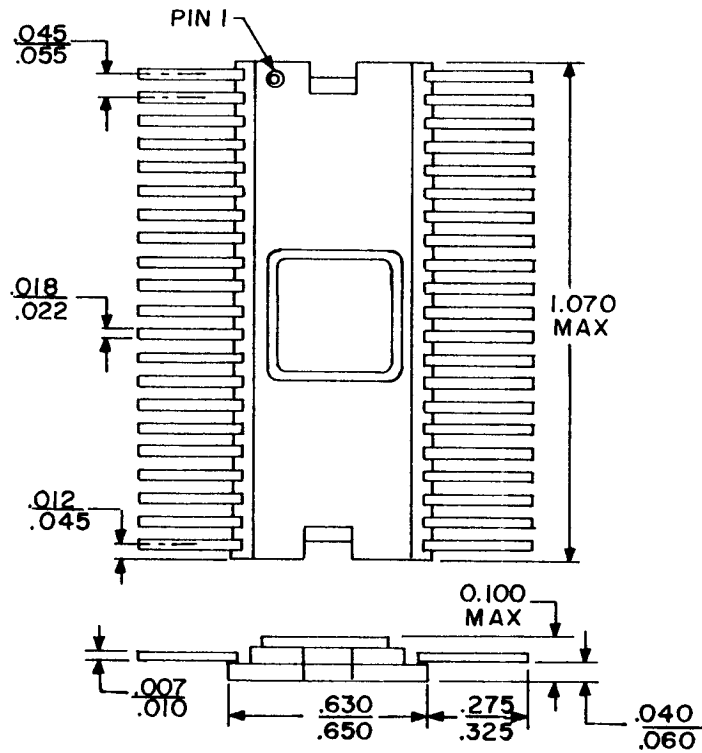

3.8 Notification of change. Notification of change to DESC-ECC shall be required in accordance with MIL-STD-883 (see 3.5 herein).

3.9 Verification and review. DESC, DESC's agent, and the acquiring activity retain the option to review the manufacturer's facility and applicable required documentation. Offshore documentation shall be made available onshore at the option of the reviewer.

4. QUALITY ASSURANCE PROVISIONS

4.1 Sampling and inspection. Sampling and inspection procedures shall be in accordance with section 4 of MIL-M-38510 to the extent specified in MIL-STD-883 (see 3.1 herein).

4.2 Screening. Screening shall be in accordance with method 5004 of MIL-STD-883, and shall be conducted on all devices prior to quality conformance inspection. The following additional criteria shall apply:

- a. Burn-in test, method 1015 of MIL-STD-883.
 - (1) Test condition C or D using the circuit submitted with the certificate of compliance (see 3.6 herein).
 - (2) $T_A = +125^{\circ}\text{C}$, minimum.
- b. Interim and final electrical test parameters shall be as specified in table II herein, except interim electrical parameter tests prior to burn-in are optional at the discretion of the manufacturer.

4.3 Quality conformance inspection. Quality conformance inspection shall be in accordance with method 5005 of MIL-STD-883 including groups A, B, C, and D inspections. The following additional criteria shall apply.

4.3.1 Group A inspection.

- a. Tests shall be as specified in table II herein.
- b. Subgroups 5 and 6 in table I, method 5005 of MIL-STD-883 shall be omitted.
- c. Subgroup 4 (C_{IN} and C_{OUT} measurements) shall be measured only for the initial test and after process or design changes which may affect capacitance. A minimum sample size of 5 with zero rejects shall be required.
- d. Subgroups 7 and 8 shall verify the instruction set. The instruction set forms a part of the of the vendor's test tape and shall be maintained and available from the approved sources of supply.

4.3.2 Groups C and D inspections.

- a. End-point electrical parameters shall be as specified in table II herein.
- b. Steady-state life test conditions, method 1005 of MIL-STD-883.
 - (1) Test condition C or D using the circuit submitted with the certificate of compliance (see 3.6 herein).
 - (2) $T_A = +125^{\circ}\text{C}$, minimum.
 - (3) Test duration: 1,000 hours, except as permitted by method 1005 of MIL-STD-883.

TABLE II. Electrical test requirements.

MIL-STD-883 test requirements	Subgroups (per method 5005, table I)
Interim electrical parameters (method 5004)	---
Final electrical test parameters (method 5004)	1*, 2, 3, 7*, 8, 9
Group A test requirements (method 5005)	1, 2, 3, 4, 7, 8, 9, 10, 11
Groups C and D end-point electrical parameters (method 5005)	1, 2, 3

* PDA applies to subgroup 1 and 7.

5. PACKAGING

5.1 Packaging requirements. The requirements for packaging shall be in accordance with MIL-M-38510.

6. NOTES

6.1 Intended use. Microcircuits conforming to this drawing are intended for use when military specifications do not exist and qualified military devices that will perform the required function are not available for OEM application. When a military specification exists and the product covered by this drawing has been qualified for listing on QPL-38510, the device specified herein will be inactivated and will not be used for new design. The QPL-38510 product shall be the preferred item for all applications.

6.2 Replaceability. Microcircuits covered by this drawing will replace the same generic device covered by a contractor-prepared specification or drawing.

6.3 Configuration control of SMD's. All proposed changes to existing SMD's will be coordinated with the users of record for the individual documents. This coordination will be accomplished in accordance with MIL-STD-481 using DD Form 1693, Engineering Change Proposal (Short Form).

6.4 Record of users. Military and industrial users shall inform Defense Electronics Supply Center when a system application requires configuration control and the applicable SMD. DESC will maintain record of users and this list will be used for coordination and distribution of changes to the drawings. Users of drawings covering microelectronics devices (FSC 5962) should contact DESC-ECS, telephone (513) 296-6022.

6.5 Comments. Comments on this drawing should be directed to DESC-ECC, Dayton, Ohio 45444, or telephone (513) 296-8525.

		REVISION LEVEL A	SHEET 18

DESC FORM 193A
SEP 87

U. S. GOVERNMENT PRINTING OFFICE 1988-550-547

Mnemonic	Type	Description
A ₀ - A ₃	I	These 4 address lines select one of the registers in the stack and output its contents on the (internal) A port.
B ₀ - B ₃	I	These 4 address lines select one of the registers in the stack and output its contents on the (internal) B port. This can also be the destination address when data is written back into the register file.
I ₀ - I ₈	I	These 9 instruction lines select the ALU data sources (I ₀ , 1, 2), the operation to be performed (I ₃ , 4, 5) and what data is to be written back into either the Q register or the register file (I ₆ , 7, 8).
D ₀ - D ₃	I	These are 4 data input lines that may be selected by the I ₀ , 1, 2 lines as inputs to the ALU.
Y ₀ - Y ₃	O	These are three-state data output lines that, when enabled, output either the output of the ALU or the data in the A latches, as determined by the code on the I ₆ , 7, 8 lines.
OE	I	Output enable. This is an active LOW input that controls the Y ₀ - Y ₃ outputs. When this signal is LOW the Y outputs are enabled and when it is HIGH they are in the high impedance state.
CP	I	Clock input.
Q ₃ , RAM ₃	I/O	These 2 lines are bidirectional and are controlled by the I ₆ , 7, 8 inputs. Electrically they are three-state output drivers connected to the TTL compatible CMOS inputs.
Q ₀ , RAM ₀	I/O	These 2 lines are bidirectional and function in a manner similar to the Q ₃ and RAM ₃ lines, except that they are the LSB of the Q register and RAM.
C _n	I	The carry into the internal ALU.
C _{n+4}	O	The carry out of the internal ALU.
G, P	O	The carry generate and propagate outputs of the ALU.
OVR	O	Overflow. This pin indicates that the result of the ALU operation has exceeded the capacity of the machine.
F = 0	O	Open drain output that goes HIGH if the data on the ALU outputs (F ₀ , 1, 2, 3) are all LOW.
F ₃	O	The most significant bit of the ALU output.

6.7 Approved sources of supply. Approved sources of supply are listed in MIL-BUL-103. Additional sources will be added to MIL-BUL-103 as they become available. The vendors listed in MIL-BUL-103 have agreed to this drawing and a certificate of compliance (see 3.6 herein) has been submitted to and accepted by DESC-ECS. The approved sources of supply listed below are for information purposes only and are current only to the date of the last action of this document.
