PRODUCT DESCRIPTION

The SST13LP05 is a fully matched, dual-band power amplifier module (PAM) based on the highly-reliable InGaP/GaAs HBT technology. This PAM provides excellent RF performance, temperature-stable power detectors, and low-current analog on/off control interfaces. The SST13LP05 provides stable RF and power detector performance over a large V_{CC} power supply variation, with an ultra-low shut-down current.

With a near-zero Rest of Bill of Materials (RBOM), the SST13LP05 is designed for 802.11a/b/g applications covering frequency bands 2.4-2.5 GHz and 4.9-5.8 GHz for U.S., European, and Japanese markets.

The SST13LP05 has excellent linearity, typically 4% added Error Vector Magnitude (EVM) at 19 dBm output power. This output power is essential for 54 Mbps 802.11g operation while meeting 802.11g spectrum mask at 23 dBm and 802.11b spectrum mask at 23.5 dBm. For 802.11a opera-

tion, the SST13LP05 typically demonstrates <4% added EVM at 18 dBm output power while meeting 802.11a spectrum mask at 22.5 dBm.

The SST13LP05 also has wide-range (>20 dB), temperature-stable (± 0.5 dB across 0°C to +85°C), directionally-coupled, power detectors which provide a reliable and cost-effective solution to board-level power control. The device's analog on/off control can be driven by an analog or digital control signal from either a transceiver or baseband chip.

These features, coupled with low operating current, make the SST13LP05 ideal for the final stage power amplification in both battery-powered 802.11a/b/g WLAN transmitters and access point applications.

The SST13LP05 is offered in a 16-contact LGA package. See Figure 2 for pin assignments and Table 1 for pin descriptions.
