CLC007
Serial Digital Cable Driver with Dual Complementary Outputs

General Description

National's Comlinear CLC007 is a monolithic, high-speed cable driver designed for the SMPTE 259M serial digital video data transmission standard. The CLC007 drives 75Ω transmission lines (Belden 8281 or equivalent) at data rates up to 400 Mbps. Controlled output rise and fall times (750 ps typical) minimize transition-induced jitter. The output voltage swing, typically 1.65V, set by an accurate, low-drift internal bandgap reference, delivers an 800 mV swing to back-matched and terminated 75Ω cable.

The CLC007's class AB output stage consumes less power than other designs, 195 mW with all outputs terminated, and requires no external bias resistors. The differential inputs accept a wide range of digital signals from 200 mV_{P-P} to ECL levels within the specified common-mode limits. All this make the CLC007 an excellent general purpose high speed driver for digital applications.

The CLC007 is powered from a single +5V or −5.2V supply and comes in an 8-pin SOIC package.

Key Specifications

- 650 ps rise and fall times
- Data rates to 400 Mbps
- 2 sets of complimentary outputs
- 200 mV differential input
- Low residual jitter (25 ps_{pp})

Features

- No external pull-down resistors
- Differential input and output
- Low power dissipation
- Single +5V or −5.2V supply
- Replaces GS9007 in most applications

Applications

- Digital routers and distribution amplifiers
- Coaxial cable driver for digital transmission line
- Twisted pair driver
- Digital distribution amplifiers
- SMPTE, Sonet/SDH, and ATM compatible driver
- Buffer applications

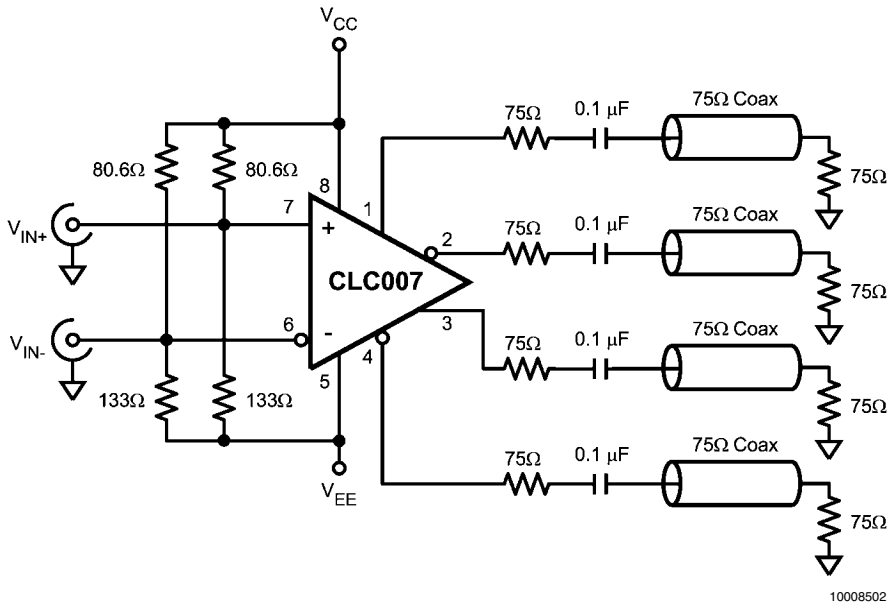
Typical Application



Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/ Distributors for availability and specifications.

Supply Voltage	6V
Output Current	30 mA
Maximum Junction Temperature	+125°C
Storage Temperature Range	−65°C to +150°C
Lead Temperature (Soldering 10 Second)	+300°C
ESD Rating (Human body Model)	1000V
Package Thermal Resistance	
θ_{JA} 8–pin SOIC	+160°C
θ_{JC} 8–pin SOIC	+105°C/W
Reliability Information	
MTTF	254 Mhr

Recommended Operating Conditions

Supply Voltage ($V_{CC} - V_{EE}$)	+4.5V to +5.5V

Electrical Characteristics

(V_{CC} = 0V, V_{EE} = −5V; unless otherwise specified).

Parameter	Conditions	Typ +25°C	Min/Max +25°C	Min/Max 0°C to +70°C	Min/Max −40°C to +85°C	Units
STATIC PERFORMANCE						
Supply Current, Loaded	(Note 5)	39	—	—	—	mA
Supply Current, Unloaded	(Note 3)	34	28/45	26/47	26/47	mA
Output HIGH Voltage (V_{OH})	(Note 3)	−1.7	−2.0/1.4	−2.0/1.4	−2.0/1.4	V
Output Low Voltage (V_{OL})	(Note 3)	−3.3	−3.6/3.0	−3.6/3.0	−3.6/3.0	V
Input Bias Current		10	30	50	50	µA
Output Swing	(Note 3)	1.65	1.55/1.75	1.53/1.77	1.51/1.79	V
Common Mode Input Range Upper Limit		−0.7	−0.8	−0.8	−0.8	V
Common Mode Input Range Lower Limit		−2.6	−2.5	−2.5	−2.5	V
Minimum Differential Input Swing		200	200	200	200	mV
Power Supply Rejection Ratio (Note 3)		26	20	20	20	dB
AC PERFORMANCE						
Output Rise and Fall Time	(Notes 3, 4, 5)	650	425/955	400/1100	400/1100	ps
Overshoot		5				%
Propagation Delay		1.0				ns
Duty Cycle Distortion		50				ps
Residual Jitter		25	—	—	—	ps_{pp}
MISCELLANEOUS PERFORMANCE						
Input Capacitance		1.0				pF
Output Resistance		10				Ω
Output Inductance		6				nH

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" specifies conditions of device operation.

Note 2: Min/max ratings are based on product characterization and simulation. Individual parameters are tested as noted. Outgoing quality levels are determined from tested parameters.

Note 3: Spec is 100% tested at +25°C

Note 4: Measured between the 20% and 80% levels of the waveform.

Note 5: Measured with both outputs driving 150Ω, AC coupled at 270 Mbps.

Operation

INPUT INTERFACING

The CLC007 has high impedance, emitter-follower buffered, differential inputs. Single-ended signals may also be input. Transmission lines supplying input signals must be properly terminated close to the CLC007. Either A.C. or D.C. coupling as in *Figure 2* or *Figure 3* may be used. *Figures 2*, *4* and *Figure 5* show how Thevenin-equivalent resistor networks are used to provide input termination and biasing. The input D.C. common-mode voltage range is 0.8V to 2.5V below the positive power supply (V_{CC}). Input signals plus bias should be kept within the specified common-mode range. For an 800 mV_{P-P} input signal, typical input bias levels range from 1.2V to 2.1V below the positive supply.

Load Type	Resistor to V_{CC} (R1)	Resistor to V_{EE} (R2)
ECL, 50Ω, 5V, V_T=2V	82.5Ω	124Ω
ECL, 50Ω, 5.2V, V_T=2V	80.6Ω	133Ω
ECL, 75Ω, 5V, V_T=2V	124Ω	187Ω
ECL, 75Ω, 5.2V, V_T=2V	121Ω	196Ω
800 mV_{P-P}, 50Ω, 5V, V_T=1.6V	75.0Ω	154Ω
800 mV_{P-P}, 75Ω, 5V, V_T=1.6V	110Ω	232Ω
800 mV_{P-P}, 2.2 KΩ, 5V, V_T=1.6V	3240Ω	6810Ω

OUTPUT INTERFACING

The CLC007's class AB output stage, *Figure 6*, requires no standing current in the output transistors and therefore requires no biasing or pull-down resistors. Advantages of this arrangement are lower power dissipation and fewer external components. The output may be either D.C. or A.C. coupled to the load. A bandgap voltage reference sets output voltage levels which are compatible with F100K and 10K ECL when correctly terminated. The outputs do not have the same output voltage temperature coefficient as 10K. Therefore, noise margins will be reduced over the full temperature range when driving 10K ECL. Noise margins will not be affected when interfacing to F100K since F100K is fully voltage and temperature compensated.

OUTPUT RISE AND FALL TIMES

Output load capacitance can significantly affect output rise and fall times. The effect of load capacitance, stray or otherwise, may be reduced by placing the output back-match resistor close to the output pin and by minimizing all interconnecting trace lengths. *Figure 8* shows the effect on risetime of parallel load capacitance across a 150Ω load.

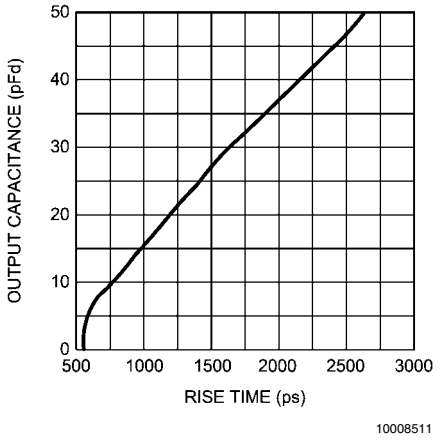

FIGURE 8. Rise Time vs C_L

PCB Layout Recommendations

Printed circuit board layout affects the performance of the CLC007. The following guidelines will aid in achieving satisfactory device performance.

- Use a ground plane or power/ground plane sandwich design for optimum performance.
- Bypass device power with a 0.01 µF monolithic ceramic capacitor in parallel with a 6.8 µF tantalum electrolytic capacitor located no more than 0.1" (2.5 mm) from the device power pins.
- Provide short, symmetrical ground return paths for:
  - — inputs,
  - — supply bypass capacitors and
  - — the output load.
- Provide short, grounded guard traces located
  - — under the centerline of the package,
  - — 0.1" (2.5 mm) from the package pins
  - — on both top and bottom of the board with connecting vias.

Physical Dimensions inches (millimeters) unless otherwise noted
