### Single direction thrust ball bearings

SKF single direction thrust ball bearings comprise a shaft washer, a housing washer and a ball and cage thrust assembly. The bearings are separable so that mounting is simple as the washers and ball and cage assembly can be mounted separately.

The smaller sizes are available with either a flat seating surface on the housing washer or a sphered seating surface. The bearings with sphered housing washer can be used together with a sphered support washer to compensate for errors of alignment between the support surface in the housing and the shaft. The sphered support washers are also supplied by SKF but they must be ordered separately.

Single direction thrust ball bearings, as the name suggests, can accommodate axial loads in one direction and thus locate a shaft axially in one direction. They must not be subjected to radial load.
