

T-666-21-51

54F/74F352 Dual 4-Input Multiplexer

General Description

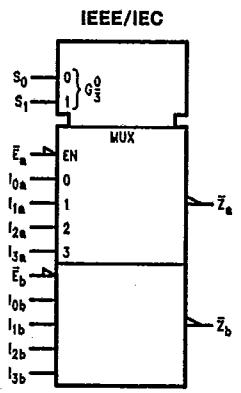

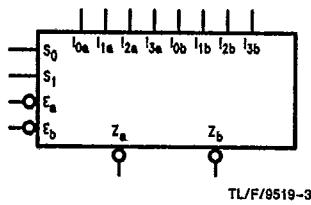

The 'F352 is a very high-speed dual 4-input multiplexer with common Select inputs and individual Enable inputs for each section. It can select two bits of data from four sources. The two buffered outputs present data in the inverted (complementary) form. The 'F352 is the functional equivalent of the 'F153 except with inverted outputs.

Features

- Inverted version of 'F153
- Separate enables for each multiplexer
- Input clamp diode limits high speed termination effects

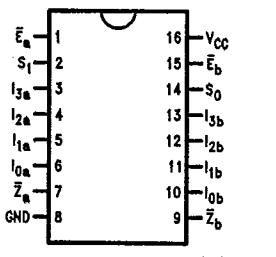

Ordering Code: See Section 5

Functional Description

The 'F352 is a 4-input multiplexer which selects two bits of data from up to four sources under the control of the common Select inputs (S_0, S_1). The two 4-input multiplexer circuits have individual active LOW Enables (E_a, E_b) which can be used to strobe the outputs independently. When the Enables (\bar{E}_a, \bar{E}_b) are HIGH, the corresponding outputs (Z_a, Z_b) are forced HIGH.

The logic equations for the outputs are shown below:

$$Z_a = \bar{E}_a \cdot (I_{0a} \cdot \bar{S}_1 \cdot \bar{S}_0 + I_{1a} \cdot \bar{S}_1 \cdot S_0 + I_{2a} \cdot S_1 \cdot S_0 + I_{3a} \cdot S_1 \cdot S_0)$$

$$Z_b = \bar{E}_b \cdot (I_{0b} \cdot \bar{S}_1 \cdot \bar{S}_0 + I_{1b} \cdot \bar{S}_1 \cdot S_0 + I_{2b} \cdot S_1 \cdot S_0 + I_{3b} \cdot S_1 \cdot S_0)$$

The 'F352 can be used to move data from a group of registers to a common output bus. The particular register from which the data came would be determined by the state of the Select inputs. A less obvious application is as a function generator. The 'F352 can generate two functions of three variables. This is useful for implementing highly irregular random logic.

Truth Table

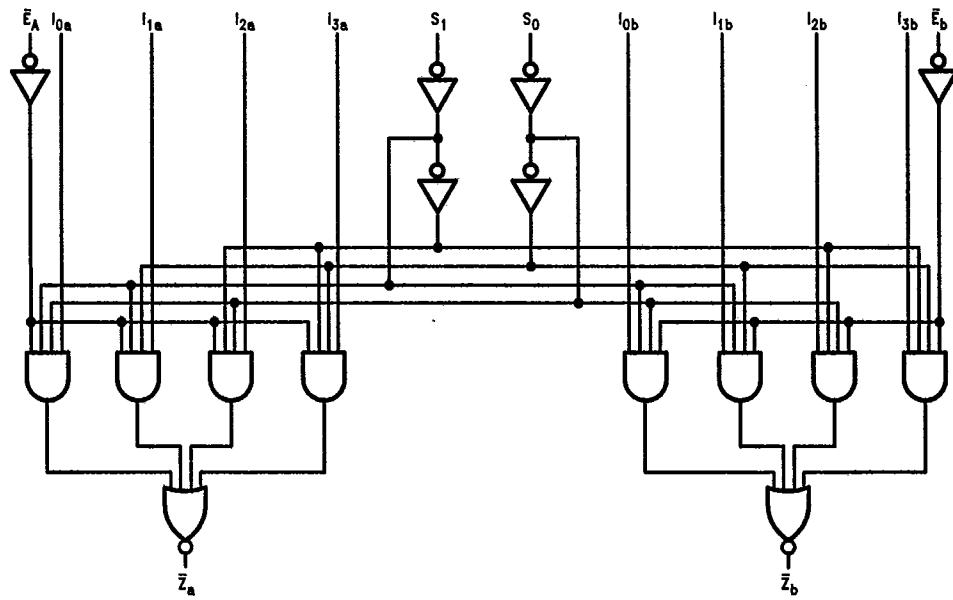

Select Inputs		Inputs (a or b)				Output	
S_0	S_1	\bar{E}	I_0	I_1	I_2	I_3	Z
X	X	H	X	X	X	X	H
L	L	L	L	X	X	X	H
L	L	L	H	X	X	X	L
H	L	L	X	L	X	X	H

Please note that this diagram is provided only for the understanding of logic operations and should not be used to estimate propagation delays.

Absolute Maximum Ratings (Note 1)

If Military/Commercial Spec'd Devices are required,
please contact the National Semiconductor Sales
Office/Distributors for availability and specifications.

Storage Temperature -65°C to $+150^{\circ}\text{C}$

Ambient Temperature under Bias -55°C to $+125^{\circ}\text{C}$

Junction Temperature under Bias -55°C to $+175^{\circ}\text{C}$

V_{CC} Pin Potential to Ground Pin -0.5V to $+7.0\text{V}$

Input Voltage (Note 2) -0.5V to $+7.0\text{V}$

Input Current (Note 2) -30 mA to $+5.0\text{ mA}$

Voltage Applied to Output in HIGH State (with $V_{CC} = 0\text{V}$)

Standard Output -0.5V to V_{CC}

TRI-STATE® Output -0.5V to $+5.5\text{V}$

Current Applied to Output in LOW State (Max) twice the rated I_{OL} (mA)

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.

Recommended Operating Conditions

Free Air Ambient Temperature *T-66-21-51*

Military -55°C to $+125^{\circ}\text{C}$

Commercial 0°C to $+70^{\circ}\text{C}$

Supply Voltage *T-66-21-51*

Military $+4.5\text{V}$ to $+5.5\text{V}$

Commercial $+4.5\text{V}$ to $+5.5\text{V}$
