### Description

The LM111, LM211, LM311 are voltage comparators that have low input currents.

They are also designed to operate over a wide range of supply voltages: from standard  $\pm 15V$  operational amplifier supplies down to the single +5V supply used for IC logic.

Their output is compatible with RTL-DTL and TTL as well as MOS circuits and can switch voltages up to +50V at output currents as high as 50mA.

## 2 Absolute maximum ratings & operating conditions

**Table 1. Absolute maximum ratings (AMR)**

Symbol	Parameter	Value	Unit
$V_{CC}$	Supply voltage	36	V
$V_{id}$	Differential input voltage	$\pm 30$	V
$V_i$	Input voltage <sup>(1)</sup>	$\pm 15$	V
$V_{(1-4)}$	Ground to negative supply voltage	30	V
$V_{(7-4)}$	Output to negative supply voltage LM111-LM211 LM311	50	V
		40	
	Output short-circuit duration	10	s
	Voltage at strobe pin	$V_{CC}^+ - 5$	V
$P_d$	Power dissipation <sup>(2)</sup> DIP8 SO-8	1250	mW
		710	
$T_j$	Junction temperature	+150	°C
$T_{stg}$	Storage temperature range	-65 to +150	°C

1. This rating applies for  $\pm 15V$  supplies. The positive input voltage limit is 30V above the negative. The negative input voltage is equal to the negative supply voltage or 30V below the positive supply, whichever is less.
2.  $P_d$  is calculated with  $T_{amb} = +25^\circ C$ ,  $T_j = +150^\circ C$  and  $R_{thja} = 100^\circ C/W$  for the DIP8 package, and  $R_{thja} = 175^\circ C/W$  for the SO-8 package.

1. The offset voltage, offset current and bias current specifications apply for any supply voltage from a single +5V supply up to  $\pm 15V$  supplies. The offset voltages and offset currents given are the maximum values required to drive the output down to +1V or up to +14V with a 1mA load current. Thus, these parameters define an error band and take into account the worst-case of voltage gain and input impedance.

2. The response time specified is for a 100mV input step with 5mV overdrive.

## 5 Package mechanical data

In order to meet environmental requirements, STMicroelectronics offers these devices in ECOPACK<sup>®</sup> packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an STMicroelectronics trademark. ECOPACK specifications are available at: [www.st.com](http://www.st.com).
