SMPTE 292M / 259M Serial Digital Cable Driver

General Description

The LMH0002 SMPTE 292M / 259M serial digital cable driver is a monolithic, high-speed cable driver designed for use in SMPTE 292M / 259M serial digital video and ITU-T G.703 serial digital data transmission applications. The LMH0002 drives 75 Ω transmission lines (Belden 8281, Belden 1694A or equivalent) at data rates up to 1.485 Gbps.

Note 1: "Absolute Maximum Ratings" are those parameter values beyond which the life and operation of the device cannot be guaranteed. The stating herein of these maximums shall not be construed to imply that the device can or should be operated at or beyond these values. The table of "Electrical Characteristics" specifies acceptable device operating conditions.

Note 2: Current flow into device pins is defined as positive. Current flow out of device pins is defined as negative. All voltages are stated referenced to $V_{EE} = 0$ Volts.

Note 3: Typical values are stated for $V_{CC} = +3.3V$ and $T_A = +25^\circ C$.

Note 4: Specification is guaranteed by characterization.

Note 5: Maximum I_{CC} is measured at $V_{CC} = +3.465V$ and $T_A = +70^\circ C$.

Note 6: Specification is guaranteed by characterization and verified by test.

Note 7: Output return loss is dependent on board design. The LMH0002 meets this specification on the SD002 evaluation board from 5MHz to 1.5GHz.

INPUT INTERFACING

The LMH0002 accepts either differential or single-ended input. The inputs are self-biased, allowing for simple AC or DC coupling. DC-coupled inputs must be kept within the specified common-mode range. SDI and $\overline{\text{SDI}}$ are self-biased at approximately 2.1V with $V_{CC} = 3.3\text{V}$. Figure 1 shows the differential input stage for SDI and $\overline{\text{SDI}}$.

FIGURE 1. Differential Input Stage for SDI and $\overline{\text{SDI}}$.

OUTPUT INTERFACING

The LMH0002 uses current mode outputs. Single-ended output levels are 800 mV_{P-P} into 75Ω AC-coupled coaxial cable (with $R_{REF} = 750\Omega$). Output level is controlled by the value of the R_{REF} resistor connected between the R_{REF} pin and V_{CC} .

The R_{REF} resistor should be placed as close as possible to the R_{REF} pin. In addition, the copper in the plane layers below the R_{REF} network should be removed to minimize parasitic capacitance.

OUTPUT SLEW RATE CONTROL

The LMH0002 output rise and fall times are selectable for either SMPTE 259M or SMPTE 292M compliance via the SD/HD pin. For slower rise and fall times, or SMPTE 259M compliance, SD/HD is set high. For faster rise and fall times, or SMPTE 292M compliance, SD/HD is set low.

REPLACING THE GENNUM GS1528, GS1528A, and GS1578A
