## FAIRCHILD

SEMICONDUCTOR

# 74ALVC16240

# Low Voltage 16-Bit Inverting Buffer/Line Driver with 3.6V Tolerant Inputs and Outputs

#### **General Description**

The ALVC16240 contains sixteen inverting buffers with 3-STATE outputs to be employed as a memory and address driver, clock driver, or bus oriented transmitter/receiver. The device is nibble (4-bit) controlled. Each nibble has separate 3-STATE control inputs which can be shorted together for full 16-bit operation.

The 74ALVC16240 is designed for low voltage (1.65V to 3.6V)  $V_{CC}$  applications with I/O capability up to 3.6V.

The 74ALVC16240 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining low CMOS power dissipation.

#### **Features**

- $\blacksquare$  1.65V to 3.6V V\_{CC} supply operation
- 3.6V tolerant inputs and outputs

■ t<sub>PD</sub>

- 3.0 ns max for 3.0V to 3.6V V<sub>CC</sub> 3.5 ns max for 2.3V to 2.7V  $V_{CC}$
- 6.0 ns max for 1.65V to 1.95V V<sub>CC</sub>
- Power-off high impedance inputs and outputs Supports live insertion and withdrawal (Note 1)
- Uses patented noise/EMI reduction circuitry
- Latchup conforms to JEDEC JED78
- ESD performance:

Human body model > 2000V Machine model > 200V

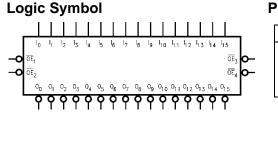

Note 1: To ensure the high-impedance state during power up or power down,  $\overline{\text{OE}}$  should be tied to  $V_{\text{CC}}$  through a pull-up resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver.

October 2001

Revised October 2001

#### **Ordering Code:**

Order Number	Package Number	Package Descriptions
74ALVC16240MTD	MTD48	48-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide
Devices also available in	Tape and Reel. Specify I	by appending the suffix letter "X" to the ordering code.

## **Pin Descriptions**

Pin Names	Description
OEn	Output Enable Input (Active LOW)
I <sub>0</sub> —I <sub>15</sub>	Inputs
$\overline{O}_0 - \overline{O}_{15}$	Outputs

L = LOW Voltage Level X = Immaterial (HIGH or LOW, inputs may not float)

Z = High Impedance

#### **Functional Description**

The 74ALVC16240 contains sixteen inverting buffers with 3-STATE outputs. The device is nibble (4 bits) controlled with each nibble functioning identically, but independent of each other. The control pins may be shorted together to obtain full 16-bit operation. The 3-STATE outputs are controlled by an Output Enable  $(\overline{OE}_n)$  input. When  $\overline{OE}_n$  is LOW, the outputs are in the 2-state mode. When  $\overline{OE}_n$  is HIGH, the standard outputs are in the high impedance mode but this does not interfere with entering new data into the inputs.

## Absolute Maximum Ratings(Note 2)

Supply Voltage (V <sub>CC</sub> )	-0.5V to +4.6V
DC Input Voltage (VI)	-0.5V to 4.6V
Output Voltage (V <sub>O</sub> ) (Note 3)	–0.5V to V <sub>CC</sub> +0.5V
DC Input Diode Current (IIK)	
V <sub>1</sub> < 0V	–50 mA
DC Output Diode Current (I <sub>OK</sub> )	
V <sub>O</sub> < 0V	–50 mA
DC Output Source/Sink Current	
(I <sub>OH</sub> /I <sub>OL</sub> )	±50 mA
DC V <sub>CC</sub> or GND Current per	
Supply Pin (I <sub>CC</sub> or GND)	±100 mA
Storage Temperature Range (T <sub>STG</sub> )	$-65^{\circ}C$ to $+150^{\circ}C$

# Recommended Operating

Conditions (Note 4)	
Power Supply	
Operating	1.65V to 3.6V
Input Voltage (V <sub>I</sub> )	0V to $V_{CC}$
Output Voltage (V <sub>O</sub> )	0V to V <sub>CC</sub>
Free Air Operating Temperature (T <sub>A</sub> )	$-40^{\circ}C$ to $+85^{\circ}C$
Minimum Input Edge Rate ( $\Delta t/\Delta V$ )	
$V_{IN} = 0.8V$ to 2.0V, $V_{CC} = 3.0V$	10 ns/V

74ALVC16240

Note 2: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 3: I<sub>O</sub> Absolute Maximum Rating must be observed.

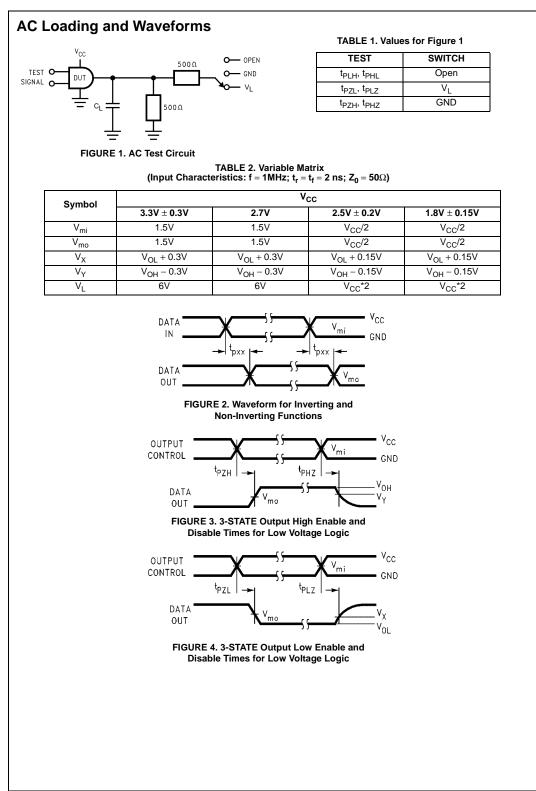

Note 4: Floating or unused inputs must be held HIGH or LOW.
