# 74LCX16821 Low Voltage 20-Bit D-Type Flip-Flop with 5V Tolerant Inputs and Outputs

#### **General Description**

The LCX16821 contains twenty non-inverting D-type flipflops with 3-STATE outputs and is intended for bus oriented applications. The device is designed for low voltage (2.5V or 3.3V) V<sub>CC</sub> applications with capability of interfacing to a 5V signal environment.

The LCX16821 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining CMOS low power dissipation.

#### Features

- 5V tolerant inputs and outputs
- 2.3V-3.6V V<sub>CC</sub> specifications provided
- 6.2 ns  $t_{PD}$  max ( $V_{CC}$  = 3.3V), 20  $\mu$ A  $I_{CC}$  max
- Power down high impedance inputs and outputs

January 1996

Revised April 1999

- Supports live insertion/withdrawal (Note 1)
- $\pm$ 24 mA output drive (V<sub>CC</sub> = 3.0V)
- Implements patented noise/EMI reduction circuitry
- Latch-up performance exceeds 500 mA
- ESD performance:
  - Human body model > 2000V
  - Machine model > 200V

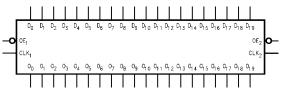

Note 1: To ensure the high-impedance state during power up or down,  $\overline{\text{OE}}$  should be tied to  $V_{CC}$  through a pull-up resistor: the minimum value or the resistor is determined by the current-sourcing capability of the driver.

#### **Ordering Code:**

Order Number	Package Number	Package Description
74LCX16821MEA	MS56A	56-Lead Shrink Small Outline Package (SSOP), JEDEC MO-118, 0.300" Wide
74LCX16821MTD	MTD56	56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide

Devices also available in Tape and Reel. Specify by appending suffix letter "X" to the ordering code.

### **Functional Description**

The LCX16821 contains twenty D-type flip-flops with 3-STATE standard outputs. The device is byte controlled with each byte functioning identically, but independent of the other. Control pins can be shorted together to obtain full 20-bit operation. The following description applies to each byte. The twenty flip-flops will store the state of their individual D inputs that meet the setup and hold time require

Note 2: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 3:  $\mathrm{I}_{\mathrm{O}}$  Absolute Maximum Rating must be observed.

Note 4: Unused pins (Inputs and I/O) must be held HIGH or LOW. They may not float.
