ABSOLUTE MAXIMUM RATINGS

Input Voltage, V_I	10 V
Output Current, I_O	150 mA*
Enable Input Voltage, V_E	V_I
Operating Temperature Range, T_A	-20°C to +85°C
Junction Temperature, T_J ...	+150°C†
Storage Temperature Range, T_S	-40°C to +150°C

* Output current rating is limited by input voltage, duty cycle, and ambient temperature. Under any set of conditions, do not exceed a junction temperature of +150°C. See next page.

† Fault conditions that produce excessive junction temperature will activate device thermal shutdown circuitry. These conditions can be tolerated but should be avoided.

LOW-DROPOUT, 3.3 V REGULATOR — HIGH EFFICIENCY

Designed specifically to meet the requirement for extended operation of battery-powered equipment such as cordless and cellular telephones, the A8186SLU voltage regulator offers the reduced dropout voltage and quiescent current essential for maximum battery life. Applicable also to palmtop computers and personal data assistants, the device delivers a regulated, continuous 3.3 V output at up to 75 mA under normal operating conditions, or to 150 mA (transient) under worst-case conditions.

A PMOS pass element provides a typical dropout voltage of only 85 mV at 60 mA of load current. The low dropout voltage permits deeper battery discharge before output regulation is lost. Furthermore, quiescent current does not increase as the dropout voltage is approached, an ideal feature in standby/resume power systems where data integrity is crucial. Regulator accuracy and excellent temperature characteristics are provided by a bandgap reference. An ENABLE input gives the designer complete control over power up, standby, or power down.

This device is supplied in a 6-lead small-outline plastic package (similar to the SOT-89/TO-243AA) for surface-mount applications. The A8186SLU is rated for operation over a temperature range of -20°C to +85°C.

FEATURES AND BENEFITS

- High Efficiency Provides Extended Battery Life
- 85 mV Typical Dropout Voltage at $I_O = 60$ mA
- 45 μ A Typical Quiescent Current at $V_I = 6$ V
Less Than 1 μ A "Sleep" Current
- Up to 150 mA Output Current
- CMOS-Compatible ON/OFF Control
For Power-Up, Standby, or Shutdown
- Internal Thermal Protection
- Surface-Mount Package

APPLICATIONS

- Cordless and Cellular Telephones
- Personal Data Assistants
- Personal Communicators
- Palmtop Computers

Always order by complete part number: **A8186SLU**.

Terminal numbering is in accordance with EIA/JEDEC convention. Where EIAJ conventions apply, the tab is not numbered, resulting in terminal 6 being designated terminal 5.

For proper operation, terminals 1 and 2 must be externally connected together.

85°C	50	60	65	75	85	105	130	150	150

$$^* I_O = (T_J - T_A) / ([V_I - V_O] R_{\theta JA} \cdot dc) = (150 - T_A) / (4.7 \cdot 258 \cdot dc)$$

Output current rating can be increased (to 150 mA maximum) by heat sinking or reducing the input voltage. Conditions that produce excessive junction temperature will activate device thermal shutdown circuitry. These conditions can be tolerated but should be avoided.
