DESCRIPTION

The KT930/KT940 series of Photo Integrated Circuit (P.I.C.) Switches provides optimum flexibility for the design engineer. Building from a standard housing with a .125" wide slot, the user can specify (1) type and polarity of TTL output, (2) Lead or wire termination, (3) discrete shell, and (4) aperture width.

The electrical output can be specified as either TTL totem pole or TTL open collector. Either may be supplied with inverter or buffet output polarity. All have the added stability of a built-in hysteresis amplifier.

All housings are an opaque grade of injection-molded polysulfone (P1700-935) to minimize the assembly's sensitivity to ambient radiation, both visible and near-infrared. Discrete shells (exposed only on the parallel faces inside the device throat) are either IR transmissive polysulfone (P1700-1615) for applications where aperture contamination may occur, or opaque polysulfone where maximum protection against ambient radiation is a concern.

The "W" series of switches are terminated with 24 inches of 7 strand, 26 AWG, UL 1429 insulated wire on each terminal. Insulation colors and functions are:

RED - IRED Anode
BLACK - IRED Cathode

WHITE - Vcc
BLUE - Output
GREEN - Ground

Other wire lengths and/or colors are available. Contact your local representative or call the factory.

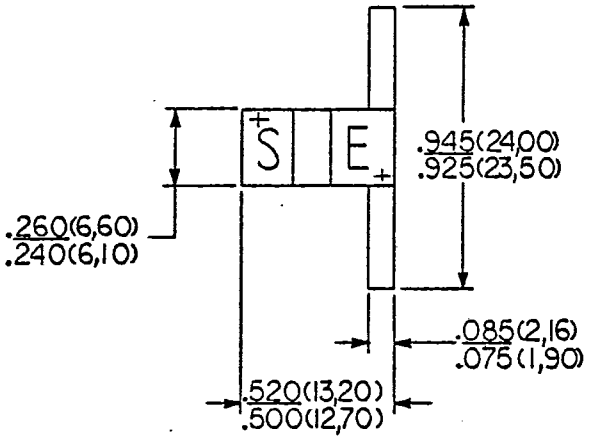
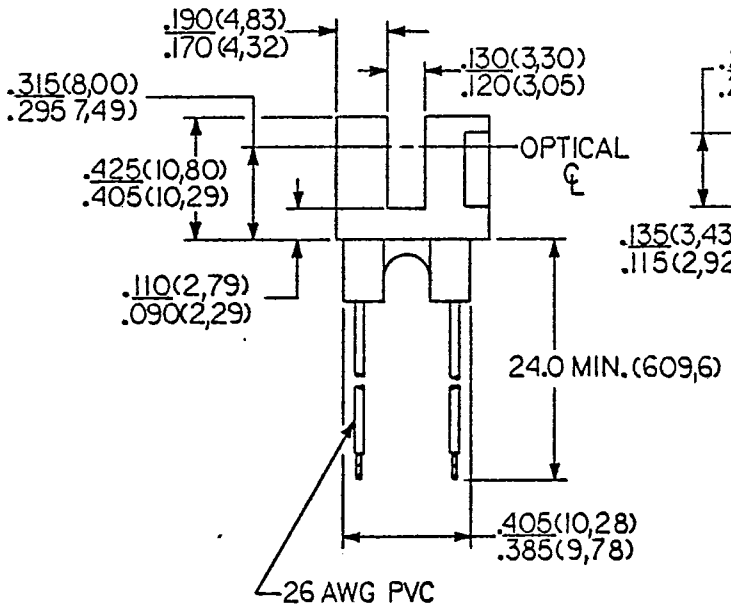
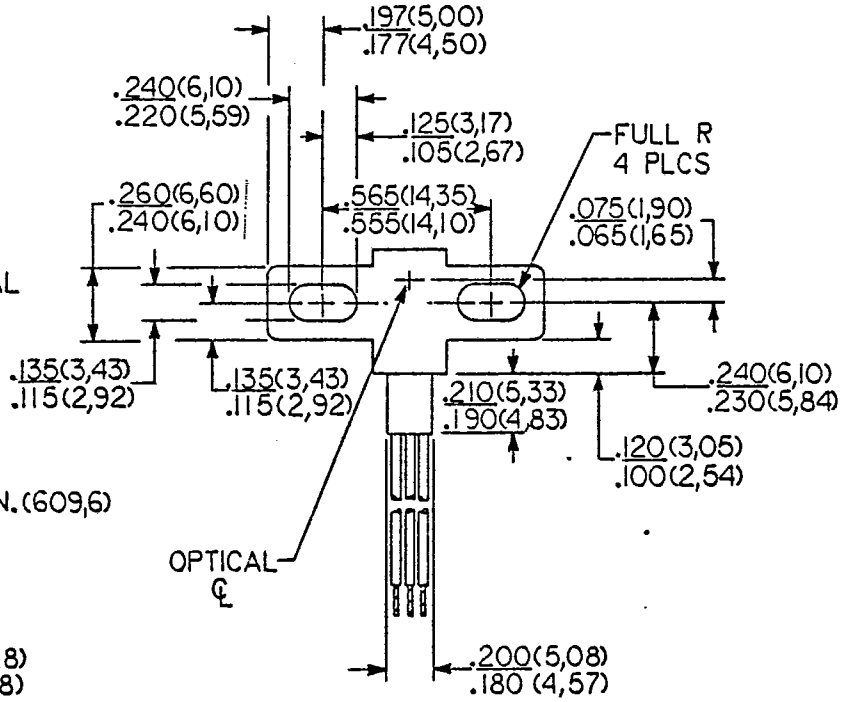
KT930 - KT940 W SERIES



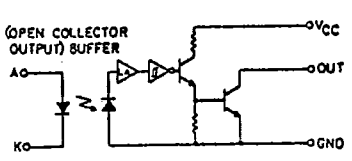
GREEN	GROUND
BLUE	OUTPUT
WHITE	V_{CC}
BLACK	CATHODE
RED	ANODE
WIRE COLOR	POLARITY



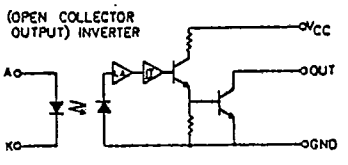


NOTE:
Housing is soluble in chlorinated hydrocarbons and ketones.
Methanol or isopropanol are recommended as a cleaning agent.

KT931/KT941



KT933/KT943

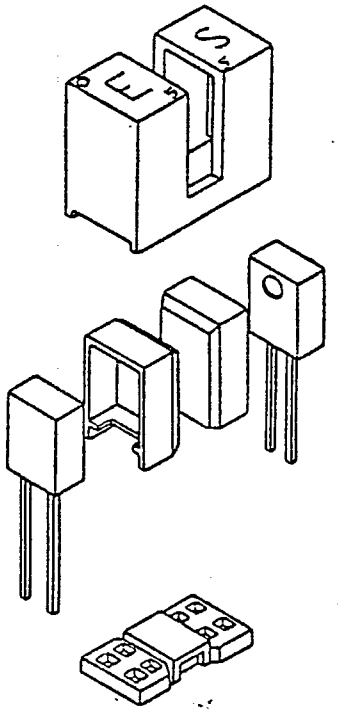


ABSOLUTE MAXIMUM RATINGS (25°C Unless otherwise noted).

Supply Voltage, Vcc (Not to exceed 3 seconds)	+ 10V
Storage Temperature Range	-40°C to +100°C
Operating Temperature Range	-40°C to +70°C
Lead Soldering Temperature (1/16" from case for 5 seconds with soldering iron)	+240°C
Input Diode Power Dissipation	100 mW (B)
Output Photologic Power Dissipation	200 mW (D)
Total Device Power Dissipation	300 mW (E)
Voltage at Output Lead (Open Collector Output)	35 V
Diode Forward D.C. Current	40 mA
Diode Reverse D.C. Voltage	3 V

Notes:
(A) RMA flux is recommended. Duration can be extended to 10 seconds maximum when soldering.
(B) Derate linerly 1.33mW/°C above 25°C
(C) Normal application would be with light source blocked, simulated by $I_F = 0$
(D) Derate linerly 2.67 mW/°C above 25°C
(E) Derate linerly 4.0 mW/°C above 25°C

MECHANICAL CONSTRUCTION



All housings are an opaque grade of injection-molded polysulfone (P1700-935) to minimize the assembly's sensitivity to ambient radiation, both visible and near-infrared. Discrete Shells (exposed only on the parallel faces inside the device throat) are either IR transmissive polysulfone (P1700-1615) for applications where aperture contamination may occur, or opaque polysulfone where maximum protection against ambient radiation is a concern.
