- ### FREQUENCY SELECT FUNCTION TABLE

Inputs					Output Frequency (MHz) (25MHz Ref.)
F_SEL1	F_SEL0	M Divider Value	N Divider Value	M/N Ratio Value	
0	0	25	4	6.25	156.25
0	1	25	5	5	125
1	0	25	10	2.5	62.5
1	1	25	5	5	125 (default)

Block diagram of the PLL module. The diagram shows the internal components of the PLL, including a Phase Detector, VCO, and M divider. The input XTAL_IN is connected to a 25MHz oscillator (OSC) and a pullup. XTAL_OUT is connected to a pulldown. REF_CLK is connected to a pulldown. The output of the oscillator is connected to the Phase Detector. The output of the Phase Detector is connected to the VCO. The output of the VCO is connected to the M divider. The output of the M divider is connected to the F_SEL1:0 multiplexer. The output of the F_SEL1:0 multiplexer is connected to the output registers Q0, Q1, Q2, and Q3. The output of the F_SEL1:0 multiplexer is also connected to the OE pullup and the MR pulldown.

F_SEL0	1	20	F_SEL1

FEMTOCLOCKS™ CRYSTAL-TO-LVCMOS/LVTTL FREQUENCY SYNTHESIZER

TABLE 1. PIN DESCRIPTIONS

Number	Name	Type		Description
1, 20	F_SELO, F_SEL1	Input	Pullup	Frequency select pin. LVCMOS/LVTTL interface levels.
2, 9	nc	Unused		No connect.
3	nXTAL_SEL	Input	Pulldown	Selects between the crystal or REF_CLK inputs as the PLL reference source. When HIGH, selects REF_CLK. When LOW, selects XTAL inputs. LVCMOS/LVTTL interface levels.
4	REF_CLK	Input	Pulldown	Single-ended LVCMOS/LVTTL reference clock input.
5	OE	Input	Pullup	Output enable pin. When HIGH, the outputs are active. When LOW, the outputs are in a high impedance state. LVCMOS/LVTTL interface levels.
6	MR	Input	Pulldown	Active HIGH Master Reset. When logic HIGH, the internal dividers are reset causing the outputs to go low. When logic LOW, the internal dividers and the outputs are enabled. LVCMOS/LVTTL interface levels.
7	nPLL_SEL	Input	Pulldown	PLL Bypass. When LOW, the output is driven from the VCO output. When HIGH, the PLL is bypassed and the output frequency = reference clock frequency/N output divider. LVCMOS/LVTTL interface levels.
8	V _{DDA}	Power		Analog supply pin.
10	V _{DD}	Power		Core supply pin.
11, 12	XTAL_OUT, XTAL_IN	Input		Crystal oscillator interface. XTAL_OUT is the output. XTAL_IN is the input.
13, 19	GND	Power		Power supply ground.
14, 15 17, 18	Q3, Q2, Q1, Q0	Output		Single-ended clock outputs. LVCMOS/LVTTL interface levels. 17Ω typical output impedance.
16	V _{DDO}	Power		Output supply pin.

NOTE: *Pullup* and *Pulldown* refer to internal input resistors. See Table 2, Pin Characteristics, for typical values.

FEMTOCLOCKS™ CRYSTAL-TO-LVCMOS/LVTTL FREQUENCY SYNTHESIZER

ABSOLUTE MAXIMUM RATINGS

Supply Voltage, V_{DD}	4.6V
Inputs, V_I	-0.5V to $V_{DD} + 0.5V$
Outputs, V_O	-0.5V to $V_{DD} + 0.5V$
Package Thermal Impedance, θ_{JA}	73.2°C/W (0 lfpm)
Storage Temperature, T_{STG}	-65°C to 150°C

NOTE: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in the *DC Characteristics* or *AC Characteristics* is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

TABLE 3A. POWER SUPPLY DC CHARACTERISTICS, $V_{DDD} = V_{DDA} = 3.3V \pm 5\%$, $V_{DDO} = 3.3V \pm 5\%$ OR $2.5V \pm 5\%$, $T_A = -40^\circ\text{C}$ TO 85°C

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
V_{DD}	Core Supply Voltage		3.135	3.3	3.465	V

APPLICATION INFORMATION

POWER SUPPLY FILTERING TECHNIQUES

As in any high speed analog circuitry, the power supply pins are vulnerable to random noise. The ICS840004I-01 provides separate power supplies to isolate any high switching noise from the outputs to the internal PLL. V_{DD} , V_{DDA} , and V_{DDO} should be individually connected to the power supply plane through vias, and bypass capacitors should be used for each pin. To achieve optimum jitter performance, power supply isolation is required. *Figure 1* illustrates how a 10Ω resistor along with a $10\mu F$ and a $.01\mu F$ bypass capacitor should be connected to each V_{DDA} .

FIGURE 1. POWER SUPPLY FILTERING

CRYSTAL INPUT INTERFACE

The ICS840004I-01 has been characterized with 18pF parallel resonant crystals. The capacitor values shown in *Figure 2*

below were determined using a 25MHz, 18pF parallel resonant crystal and were chosen to minimize the ppm error.

FIGURE 2. CRYSTAL INPUT INTERFACE

LVCMOS TO XTAL INTERFACE

The XTAL_IN input can accept a single-ended LVCMOS signal through an AC couple capacitor. A general interface diagram is shown in Figure 3. The XTAL_OUT pin can be left floating. The input edge rate can be as slow as 10ns. For LVCMOS inputs, it is recommended that the amplitude be reduced from full swing to half swing in order to prevent signal interference with the power rail and to reduce noise. This configuration requires that the output

impedance of the driver (R_o) plus the series resistance (R_s) equals the transmission line impedance. In addition, matched termination at the crystal input will attenuate the signal in half. This can be done in one of two ways. First, R_1 and R_2 in parallel should equal the transmission line impedance. For most 50Ω applications, R_1 and R_2 can be 100Ω. This can also be accomplished by removing R_1 and making R_2 50Ω.

Figure 3. GENERAL DIAGRAM FOR LVCMOS DRIVER TO XTAL INPUT INTERFACE

RECOMMENDATIONS FOR UNUSED INPUT AND OUTPUT PINS

INPUTS:

CRYSTAL INPUTS

For applications not requiring the use of the crystal oscillator input, both XTAL_IN and XTAL_OUT can be left floating. Though not required, but for additional protection, a 1kΩ resistor can be tied from XTAL_IN to ground.

REF_CLK INPUT

For applications not requiring the use of the reference clock, it can be left floating. Though not required, but for additional protection, a 1kΩ resistor can be tied from the REF_CLK to ground.

LVCMOS CONTROL PINS

All control pins have internal pull-ups or pull-downs; additional resistance is not required but can be added for additional protection. A 1kΩ resistor can be used.

OUTPUTS:

LVCMOS OUTPUTS

All unused LVCMOS output can be left floating. We recommend that there is no trace attached.

LAYOUT GUIDELINE

Figure 4 shows a schematic example of the ICS840004I-01. An example of LVCMOS termination is shown in this schematic. Additional LVCMOS termination approaches are shown in the LVCMOS Termination Application Note. In this example, an 18pF parallel resonant 25MHz crystal is used.

The C1=22pF and C2=22pF are recommended for frequency accuracy. For different board layout, the C1 and C2 may be slightly adjusted for optimizing frequency accuracy. 1kΩ pullup or pulldown resistors can be used for the logic control input pins.
