Product Summary

Part Number	I _o	V _{in}	V _{out}	Package
OM8500SC	3.0A	3.3V	1.8V	MO-078AA
OM8500SF	3.0A	3.3V	1.8V	8-lead Flatpack

The OM8500 is a low dropout linear regulator designed specifically for high reliability applications. Housed in either a 5 pin through hole or 8 lead surface mount package, these regulators provide high reliability in military/defense applications. The low dropout voltage of 1.1V @ 3A makes the part particularly useful for applications requiring low noise and higher efficiency.

Features:

- Low dropout of 1.1 volts significantly reduces power consumption
- Low noise, higher efficiency
- Remote shutdown permits power sequencing to be easily implemented
- Hermetic MO-078AA (TO-258AA) and 8-lead flat pack ensure higher reliability
- Available H-level screened

Simplified Schematic

In order to maintain regulation and stability specified additional input and output bulk capacitors are recommended. Capacitors recommended above should be low ESR tantalums with tolerances of +/- 20% max. Internal to the product are a 4.7uF input capacitor and a 4.7uF output capacitor in parallel with a 0.33uF ceramic capacitor.

Shutdown: The regulator can be shutdown by applying a voltage >1.6V to pin 4. The regulator will restart when the SHDN pin is pulled below the shutdown threshold of 1.0V. If remote shutdown is not required, pin 4 should be connected to GND to insure a safe "off" state.
